

Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

+ *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.

+ *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.

+ *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.

+ *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. THE BRITISH & COLONIAL PRINTER AND STATIONER

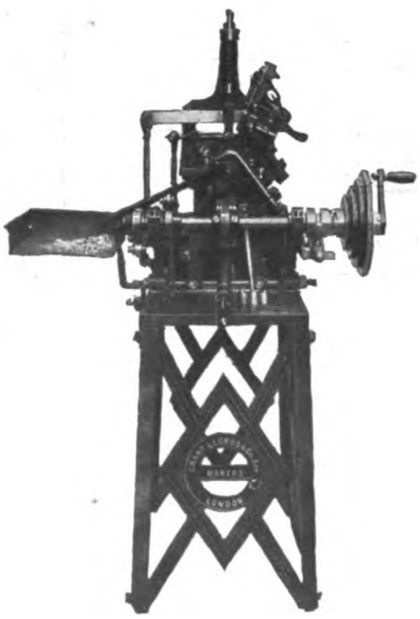
FOUNDED 1878. PUBLISHED WEEKLY.

[Registered at the General Post Office as a Newspaper for Transmission in the United Kingdom.]

THIRTY-FIFTH YEAR.



VOLUME LXXII. NUMBER 1. LONDON: JANUARY 2, 1913. EVERY THURSDAY. PRICE TWOPENCE.

Why not Start the Year by Cutting Down Costs?

The Davis Typecaster

WILL CUT DOWN COSTS.

(a) in your Expenditure on New Type.
(b) in your Composing Room.
(c) in your Machine Room.

This simple Machine will Cast Type of accuracy, in any face, all body sizes, from 3 to 30 points, letters, spaces and quads, at an average cost of 50 per cent. less than typefounders' prices.

A DAVIS TYPECASTER is working at the City Offices. All Printers are invited to call for a demonstration. You will get figures in support of the statement, with regard to Cutting Down Costs, on request.

GRANT, LEGROS & CO, Ltd.,

376, AVENUE CHAMBERS,
Southampton Row, London, W.C.

The Monotype

THE COMPOSING MACHINE WHICH DOES NOT RECEIVE ALL THE "FAT" COPY

IF you are buying a flat-bed printing machine, you do not buy one for long runs only. Neither do you buy it for the purpose of art work alone. You buy it for its general utility, because you cannot afford to buy a machine with limitations. Dividends and profits have to be made.

Suppose you have a compositor so capable that you can hand to him *any* piece of copy, feeling confident in doing so the perfect job will be evolved. You would say: "This is the man for me: he has no limitation of ability."

In those printing offices where THE MONOTYPE is working side by side with other composing machines, which receives *all* the difficult work? THE MONOTYPE.

If the Monotype receives all the difficult work—and it is from such work you secure better prices—it is positive proof that it is *the* only machine able to handle every class of job without discrimination.

IT IS THE MACHINE WITHOUT LIMITATIONS

The jobbing printer needs the Monotype—for it is still the only composing machine casting and setting single types at great speed. It is the only machine that will set seven alphabets in any required size of type, from one fount only.

It is still the only machine in the product of which corrections may be made without stopping the earning power of that machine.

Won't you come into line for 1913? It is going to be a year of big business, and THE MONOTYPE will help you to share in it.

If you have any printing proposition of a difficult nature, we can help you.

Composed and Cast on the Monotype.

THE LANSTON MONOTYPE CORPORATION, LIMITED,
43 & 43a, FETTER LANE, LONDON, E.C.

3, Bothwell Circus, Glasgow. 6, St. Ann's Passage, Manchester.
29, Eden Quay, Dublin.
Works: Redhill, Surrey.

E & S "ALBERT GALVANO" QUALITY

WHAT
Is an Electro?

To some printers an electro is a duplicate of an original. To others—and those are the ones whom we desire to reach—an electro is not distinguishable from an original, *because the faces of both are the same copper colour.*

As printers you have to order half-tones. Suppose you need four of one subject. There is no need to pay 6d. per square inch for the four. Just order one only, and send that one to our Electro Department, and three duplicates—or, better still, four, because then you will always have the original as a stand-by in case of a smash—will be supplied at about 75% less than an original. But will the duplicate be as good as the original?—you query.

The Albert-Galvano method of making electros ensures the duplicate being an **EXACT DUPLICATE**—not just an electro.

An electro made by Eyre & Spottiswoode, Ltd., at its best is a printing plate—mounted or unmounted—equal in every respect to an original. An E. & S. electro will be as good in quality, and as durable, as an original copper or zinc block.

Hundreds of firms are using the E. & S. single and colour electros—which are *actually facsimile.* You colour printers know what will be saved by the use of dependable colour duplicates.

We want you to investigate this electro matter. When you have talked or done business with us you *will* realise that we can be of greater use to you than from the invoice standpoint only.

E. & S. electros can save you a lot of time in the machine room.

THE BRITISH & COLONIAL PRINTER AND STATIONER

FOUNDED 1878. PUBLISHED WEEKLY.

[REGISTERED AT THE GENERAL POST OFFICE AS A NEWSPAPER FOR TRANSMISSION IN THE UNITED KINGDOM.]

THIRTY-FIFTH YEAR.

VOLUME LXXII.
NUMBER 1.

LONDON: JANUARY 2, 1913.

EVERY THURSDAY.
PRICE TWOPENCE.

The Year that is Past.

SOME HAPPENINGS IN 1912.

"THE inaudible and noiseless foot of time," as Shakespeare terms it, has paced for us another period in the round of life, and with the past year another portion of our brief existence has passed from us for ever. At such a time it is but natural for the thoughts of men to revert to the occurrences of the past twelve months and to look forward with hope to what the year that is beginning may have in store. The events that lie in the womb of the future are beyond our province to foretell; it is our part but to deal with the past, and so, in accordance with our annual custom, in this our first issue of the New Year we will pass briefly in review a few of the leading incidents and events that have more immediately affected the interests of Paper and Print during the past twelve months. From week to week our pages have fully chronicled the various matters that have been of interest to the printing and allied trades, and while there has been little of a startling character to record, it is satisfactory to be able to say that there have been but few disturbing influences at work, and that trade has been fairly good all round, so that, if not exactly a record-breaking year for profits, yet, on the whole the trades we represent have not had much to complain of. The importance of a correct cost system to the printer has been receiving a considerable amount of attention in this country, though we are still far behind our American brethren in that respect. Much time and attention has been devoted to the preparation of a costing system, suitable for universal adoption by the trade, by the Federation of Master Printers and Allied Trades of the United Kingdom of Great Britain and Ireland, and the Committee of the Council appointed to deal with the matter, state that they are more than ever convinced that the main remedy for unremunerative prices and price cutting lies in the general adoption by the trade of a uniform costing system, and they are encouraged by reports received from all parts of the country to believe that the present is an opportune time for its introduction. A system has been outlined and is now being considered. An echo of the 1911 London strike was heard in November last when the Board of Trade, at Mr. Masterman's request, undertook an investigation into the conditions of the printing trade in London, involving some 60,000 persons. They reported that 50 hours may now be accepted as the predominant working week within the meaning of the Fair Wages clause. Following on this announcement the matter came up in the House of Commons, when Mr. Peto called attention to the matter. He complained that the Treasury had refused to hear the case of the Government printing contractors, and had settled the dispute by insisting on a 50-hour week for Government printers in response to pressure from the Labour members. Mr. Masterman denied any such pressure, and said that the contracts for printing and binding in the London district amounted to about £310,000 a-year. Of this, £265,000 was held by houses working at the 50 standard. Only £45,000 was held by firms working 52½ hours. Eighty-five per cent. of the contracts were given to firms which had accepted the favourable rate of conditions as far as they affected the men, and he thought it was unfair that this 85 per cent. should have to face the competition of the 15 per cent. who did not give the 50 hours. A meeting of the printing trade of London was then called, "To consider the recent unprecedented and arbitrary action of the Treasury taken at the instance of the Trades Unions without full and open inquiry, and, if thought fit, to pass a resolution of protest against such action, and a request for the reversal of the decision." A resolution on these lines was passed and forwarded to Mr. Masterman and other Government officials, and subsequently a deputation of master printers waited on Mr. Masterman and put their case before him, but without success, and there the matter rests at time of writing. In July the great tangle of copyright laws from which authors and proprietors of copyright have so long suffered came to an end, and a new code came into operation. The principle features the new Act are the abolition of the old system of registration which has hitherto been such a pitfall in the way of aggrieved owners of copyright, the simplification and extension of the remedies for infringement, and, above all, the grant of new rights and advantages to the present proprietors of copyright, with the free grant to the original authors of the extended term unaffected by any extending assignments. Another matter that affected the trade was the advance in price of type and spacing material, caused by the high prices to which the constituent metals have now advanced.

New Inventions.

Nothing very startling or revolutionary has been produced in the way of new machinery, but steady progress has been made along existing lines, and a number of new and improved appliances have made their appeal to the trade. Messrs. Linotype and Machinery Ltd. have made another addition to the Multiple-Magazine Linotypes in the form of a four magazine machine, known as Linotype Model No. 9. The magazine equipment and arrangement is similar to the Model No. 3 Linotype—that is to say, each of the four magazines on the Model No. 9 machine has an independent distributer, and this arrangement permits of matrices being set from all four magazines in one line if necessary. The same firm has also put on the market a new Rotary Offset Press. The L. and M. Offset Litho Rotary is a two-revolution machine, and is quite up-to-date in all its arrangements. Messrs. Linotype and Machinery Ltd. have also introduced the "Renaissance" Press for intaglio and letterpress printing. It is a sheet-fed rotary, complete in itself, for the rapid production of high-class letterpress, and also in connection with this or independently of it at will, photogravures may be offset printed from intaglio plates. The same company's Duplex Tubular-plate Press is growing in favour for newspapers. The Colt's Armory Platen Printing Machines as made by the John Thomson Press Co. of New York, and handled in this country by the P. Lawrence Machinery Co., 57, Shoe-lane, E.C., have acquired a great popularity among printers. And a new model is now made under the titles of the "Laureate," that combines several new and important features. In intaglio printing there has been quite a boom and a number of new machines for the purpose have been introduced. In addition to the "Renaissance," already mentioned, there are intaglio machines in use in Bristol and in London for the rapid production of photogravure prints, and the *Illustrated London News* is employing an intaglio press of a unique character for printing pictures in that paper. A valuable adjunct to the offset press is the latest production of Messrs. Waite and Saville, Ltd., Falcon Works, Otley, and its uses are many and varied. It makes obsolete the present method of taking a transfer from a negative stone or plate, and then pulling a second transfer from the first one to lay down on the zinc plate, a process which necessarily entails a loss of sharpness and delicate detail. With the "Reverso" one transfer only is necessary from negative designs, with the result that clearer, brighter and sharper transfers, it is claimed, can be obtained than have hitherto been possible, while the saving in time is considerable. This press will also be found invaluable for proving offset and tin printing work in colours. Mr. W. T. Fletcher, of Belfast, has patented an ingenious press to print one or both sides of a continuous reel of paper from flat forms, and at a speed several times quicker than can be attained by feeding separate sheets of paper into a machine. Among the lesser inventions we have described during last year were a Baling Press, by the Canadian-American Co., and another of a like character, known as the "Paal" Press, by Messrs. Kampe and Co.; a new attachment for stamping labels, by Karl Krause, a colour registering device, by Messrs. A. W. Penrose and Co., etc. A considerable number of new appliances were patented during the year, particulars of which have appeared week by week in our columns.

The Factory Acts.

The report of the Chief Inspector of Factories and Workshops was dealt with fully in our issue of August 22nd last, and an improvement was noticed in the more careful fencing of machinery, cleaner work-rooms, and better conditions of employment as regards sanitary matters, a distinct advance being noticeable in the methods of dealing with the fumes from the different classes of composing machines that use melted metal. In one case, however, a complaint as to the use of dirty rags for cleaning machinery led to a special enquiry, which resulted in some very unsavoury disclosures. Many of the rags used consisted of underclothing and body linen in an abominable and filthy condition, and could not be handled without a feeling of disgust and risk of injury to health. In some cases even hospital dressings were included without any attempt at washing or disinfecting. In justice to the employers it should be stated that they appeared to be unaware of the condition of the rags, and at once gave instructions for their use to be discontinued. The new Bronzing Regulations came into force in June with regard to bronzing with dry metallic powders in letterpress and lithographic printing and the coating of metal sheets. The duties imposed upon occupiers comprise the provision of an efficient exhaust draught or an appliance so constructed as to prevent as far as practicable the escape of dust into the air of any occupied room, and that there shall be provided and maintained in a cleanly state and in good repair for the use of all persons employed in bronzing a lavatory under cover, with a sufficient supply of clean towels, renewed daily, and of soap and nail brushes. The persons employed in bronzing must wash the face and hands before partaking of any food or leaving the premises, and they are to wear overalls, to be provided in pursuance of the regulations. No person employed will be allowed to introduce, keep, prepare, or partake of any food or drink (other than milk or tea provided by the occupier) in any part of the factory or workshop, or make use of tobacco. The full text of the Home Office circular was given in

our issue of February 22nd. Among the accidents that we had to chronicle during the year was one at the Fleet Printing Works, Whitefriars-street, E.C., when the large wheel of a printing machine had to be smashed before it was possible to extricate a machine manager, whose arm had been dragged between the rollers while he was adjusting some screws. Four men were injured in a lift accident at the premises of the British Book and Novelty Co., the makers of Dean's Rag Books, near the "Elephant and Castle." The lift fell from one of the upper floors, a distance of over twenty feet. An inquest was held at Manchester on Albert Comer, who had been employed as a paper cutter at Messrs. Abel Heywood and Co.'s works in Spear-street, and who fell down a hoist hole and was killed. A fatality occurred in a Sheffield newspaper printing office; a man named Charles Stanhope becoming entangled in a revolving shaft was killed almost instantly. While a workman employed by the Keighley Printers, Ltd., was engaged at a paper guillotine his left hand was caught by the blade and all the fingers severed. A number of actions were brought for compensation for various injuries, and in most instances the employers had to pay.

Trade Disputes.

Fortunately there have been but few disputes in the trades we represent. At one time it appeared as if the whole trade, nearly, of the town of Otley would be paralysed by a strike of the printers' engineers employed in the several works there, but the matter was settled without resort to a strike. The men did not get all they asked for, but the masters granted a good deal of what was requested, and the men agreed to accept the offer. Briefly stated, the men asked for a general advance of 2s. per week for all Society men, that apprentices should receive 23s. per week when released from their indentures, increasing to 25s. in a couple of years, and that all labourers should have a minimum of £1 per week. To the latter proposals the masters agreed, and offered a general advance of 1s. to the other Society men. A ballot was taken, and by a majority of about 300 the men agreed to accept the terms. In Edinburgh a dispute which was threatened in the trade over the question of piecework was settled. The men, through the Typographical Association, presented to the master printers a memorial asking for the abolition of the piecework system. The masters regarded this as a breach of the piece agreement come to at the last dispute, and a conference between parties was held, when after discussing the points at issue no agreement was arrived at, but the dispute was settled by the men having withdrawn the memorial. In the same City the employees of Messrs. Miller and Richard, typefounders, came out on strike on the matter of an increase of wages, and after an interval of several weeks, during which the men remained out, was finally settled by the firms making considerable concessions to the men's demands. Disputes also took place in Sunderland, Carnarvon and a few other places. Under the Trade Boards Act, 1909, a scale of wages for cardboard box-makers came into force whereby minimum rates for the different classes of workers have been fixed.

The Trade Charities

have been well supported during the year, the Printers' Pension Corporation, of course, taking first place, with its extensive staff of supporters in the form of pension funds and auxiliary committees. The Drummond Pension, Crespin-Harding Pension, Readers' Pension, Vellum Printers' Pension, and others have been all well supported. The B.S.C. Fund, the Lithographic Auxiliary, and others have done good collecting work, and the Caxton Convalescent Home at Limpsfield, Surrey, and its namesake at Deal have done good work also for those members of the trade whose health failed them. The Printers' Medical Aid Association has also been doing good work, and its scope has included free treatment in hospitals, sanatoria (for consumptives), convalescent homes, both inland and at the seaside, while the issue of free surgical appliances has undoubtedly filled a long-felt want in the trade. The issues of "Printer's Pie" and "Winters' Pie" have also brought in a considerable amount of money in aid of the trade charities whose excellent work is well deserving of support.

Trade Athletics.

The sports side of the allied trades is well looked after by various associations and clubs, chief among which we must place the Printing and Allied Trades Charity Sports Association which combines the promoting of athletics and the aiding of the trade charities. The branches of sport covered by this flourishing Association are becoming more numerous along with its growth in popularity each year. The sport now under its direction and encouragement is in five separate sections, and so huge has become the programme of athletics that has for many years past been carried out at the Crystal Palace in June that it might be divided into separate meetings. This success must be very encouraging to the many patrons of the Association, to the hon. sec., Mr. H. F. Parker, and the numerous officials who work so hard and unselfishly for the worthy cause which is the object of all this endeavour. The various charities connected with the printing and allied trades have benefited to the extent of nearly £3,000 through the agency of this Association, and its success should be a source of much congratulation. The meeting of the Association at the Crystal Palace on June 15th was an excellent one, the attendance was large and the programme a long one, with numerous entries. Among the events the Two-mile Inter-Team Race for the Linotype Challenge Shield attracted special interest, and this year it was retained by the holders, Amalgamated Press, who wrested it from J. Dickinson and Co. last year. Swimming is one section of athletics to which the Association devotes its energies, and in October an aquatic entertainment was given at the Lambeth Baths with much success. The athletic clubs in connection with business houses, such as Cassell's, Eyre and Spottiswoode's, Dickinson's, Hentschel's, etc., have also been going strong during the year, and many provincial firms' clubs have provided excellent and healthful recreation for their members.

Conferences.

The most important conference, so far as the allied trades are concerned, was the annual meeting of the Federation of Master Printers and Allied Trades of the United Kingdom, which was held at Edinburgh, to which city the members were welcomed by the Lord Provost. The business meeting was held under the presidency of Mr. W. B. Blaikie, who, in the course of his address, said that: "With reference to the settlement of the Typographical Association, he looked on such settlements by great federations on either side as by far the more likely way of preserving peace in the future between the masters and their workmen. A strong federation could only be treated with respect, and on either side was far more likely to make lasting agreements than casual agreements that might be come to. He thought this step was a great one towards, not exactly peace, but to a period of neutrality at any rate and truce. Referring to the dispute with the Edinburgh and Glasgow lithographers, the Chairman said in the middle of the year the Edinburgh lithographers demanded a diminution of hours; and the Glasgow lithographers at the same time demanded a large increase of wages. Of course this was intended to attack the master lithographers in either town; and he was afraid there would have been a chance of their having been attacked successfully had it not been that the masters of Edinburgh and Glasgow met together and determined to make common cause. To his mind, the greatest triumph of last year had been the formation of the Committee of Reference. Here they had what would be a buffer between the immediate strike and the immediate lock-out." Other business followed, and Colonel W. Wright Bemrose, of Derby, was elected president for the current year. The forty-fifth annual Congress of Trade Unions was held at Newport (Mon.) in September, and was attended by about five hundred delegates, representing about 2,000,000 members of trade unions. The report for the past year shows a wonderful growth of trade union membership, it totalling up to 1,967,608, asagainst 1,662,133 last year, an increase of over 300,000. The unions connected with the printing and allied trades that were represented at the Congress numbered eleven, with a total membership of 65,715, and were represented by 23 delegates, as compared with ten unions in 1911, when 58,893 members were represented by 21 delegates. During the Conference a discussion on the two new Labour newspapers took place, and suggestions were made that the *Daily Herald* had to go to the enemies of labour for financial support, and on the other hand that the *Daily Citizen* was being financed by middle-class people, and that those responsible for it were doing their best to oppose the *Daily Herald*. Finally, the President closed the discussion with the remark that he hoped that all trade unionists would give both papers their support. At the end of August there was quite an influx to Brighton of newspaper men from all parts of the kingdom, as well as the representatives of a considerable section of the Colonial Press, and a very hearty welcome was given them by the Mayor and Corporation of that town, where the Annual Conference of the Institute of Journalists was held. A considerable amount of business was got through, and it was decided that the next Annual Conference should be held in Canada. The annual meeting of the Associated Booksellers of Great Britain and Ireland was held in Dublin, when the Lord Mayor of the city bade the delegates a very hearty welcome, and said that the citizens were complimented and honoured by an organisation such as that holding their annual function there, recognising thoroughly that it was a compliment not only to the city itself, but one evidently to the reputation the citizens enjoyed for the hospitable treatment of strangers. The citizens recognised thoroughly that the visit of such organisations as the Booksellers was calculated to do away with little prejudices that had existed and was calculated to bring about the proper feeling which should exist between countries so closely allied to them as England, Scotland, and Wales were. The thirty-fifth annual conference of the Library Association was opened in Liverpool under the presidency of Mr. Frank Leslie, the chairman of the Liverpool Corporation's Library, Museum, and Arts Committee. About 300 delegates were in attendance. The thirty-fifth annual report of the Association stated that the Law and Parliamentary Committee had drafted a new Library Bill, embodying the changes agreed upon at the previous annual meeting. A number of papers were read and discussed, and at the concluding sitting of the Conference Mr. W. E. A. Axon (Manchester) drew attention to the figures of the world's output of books presented to the Bibliographical Congress held at Brussels in 1910 by M. B. Iwinski. In the table as to the production of books by different countries in years as near to 1908 as the compiler was able to obtain, Japan led off with 36,046; Germany came

second with 30,317, then Russia with 23,852, the United States 9,821, England 9,821, France 8,799, Italy 6,918. The annual meeting of the Scottish Library Association was held at St. Andrews in June. Sir James Donaldson, in extending to the members a hearty welcome, said the University regarded librarians as fellow-workers. Librarians had the selection of a large number of books, and in selecting books they could exercise a great influence on the makers of them, for the makers would consider what books the librarians wanted. Two principles should be carried out in the selection of books. The books should be healthy, and they should also be stimulating to the intellect.

Trade Literature.

Among the more practical technical publications of the year were two by Mr. Charles Harrup, dealing with the lithographic side; these were entitled "Transferring," and "Metalography and Offset Printing." The interesting American volume, the "Graphic Arts and Crafts Year Book," is a veritable encyclopædia of the progress of the printing art in that country, and is most excellently compiled. Messrs. T. C. and E. C. Jack published an interesting and useful work on "Monograms and Cyphers," and "Electric Power in the Printing Office" was the title of a booklet, by Mr. Howard Marryat, M.I.E.E., issued from the office of the *Electrical Times*. Other publications were "The English Provincial Printers, Stationers and Bookbinders to 1557," by E. Gordon Duff, M.A.; "The British Museum Reading Room," a handbook for students, by R. A. Peddie. "The Authors' and Printers' Dictionary," by F. Howard Collins, being a fourth edition of that useful work. Mr. T. Bridges' "Punctuation Simplified" was issued in its seventh edition, and Mr. Horace Hart's "Rules for Compositors and Readers" in a 22nd edition. The New Copyright Act, 1911, has had several exponents, and the usual crop of trade directories has been published From Sir Isaac Pitman and Sons we received "Printing and Publishing," and from France the "Dictionnaire de l'Imprimerie et des Arts Graphiques en General," by E. Desormes and A. Muller. "Les Encres," a book published by M. Gauthier-Villars. A "Practical Text Book of Lithography" came from the offices of the *National Lithographer*, New York, and for lighter reading we had "Printers' Pie" and "Winter's Pie," both of which, while they entertained us, gave satisfaction in the knowledge that they were helping the trade charities to an enormous extent.

Printers' Managers and Overseers Association.

This Association continues to grow. It has added two more Centres during the past twelvemonth — Dublin and North Midland bringing the number of Centres up to eight — and its united membership has increased by 89, the total strength of the Association being now 1,017. The finances are in a healthy state. The most striking feature of the past year has been the unprecedented rise in unemployed benefit payments. These amounted to a total of £183 10s., the highest amount previously paid in one year having been £114. Calls on the Benevolent Fund were heavy, the balance being about £8 lower than last year, while the Death Benefit Fund showed a further increase, being £118 14s. in advance of the previous accounts. The gross value of the funds are £1,145 1s. 11d. being an increase on the year's working of £95 4s. 4d. The President of the Association, Mr. R. J. Davies, after many years' service, has retired, and Mr. C. J. Gray has been elected to fill the office.

Perhaps the most important matter that has engaged the attention of the Association as a whole has been that relating to the trade custom as to an overseer's notice. A conference was held at Anderton's Hotel, Fleet-street, E.C., on May 24th, between representatives of the Association and the National Printing and Kindred Trades Federation. The sitting, which lasted nearly two hours, was private. Subsequently a letter was received from the Federation stating that whilst they were in agreement that the custom of a month's notice for printers' managers and overseers should be enforced during normal times, members of the Federation's societies must be prepared to conform to the rules of their Society during times of dispute. After discussing this, the Parent Association decided to wait until the affiliated Centres had reported their views on the matter before making a report on the question to a general meeting, but in the meantime reiterated its adherence to the principle of notice as established by trade custom, and incorporated in the rules of Association.

Many interesting meetings with lectures and discussions have been held during the past year, as recorded in our columns. In London a paper on "The Future of the P.M. and O.A.," by Mr. S. M. Bateman, created considerable interest, being followed by other papers on the same subject by other members, the discussion extending over three meetings, the Centres afterwards taking it up. A special committee has been appointed by the Parent Association to consider and report upon the suggestions made, and this committee has not yet concluded its work. The annual dinner was held as a Festival in aid of Pension No. 2 Fund, which resulted in its substantial augmentation. A joint meeting of the Parent Association and Centres took place in Manchester early in the

Digitized by Google

year, when the Lord Mayor of Manchester received about 300 guests at the City Hall. Among the technical subjects dealt with were "A Cost Finding System for Printers," at Birmingham Centre; "Modern Printing Offices: a Critical Analysis of a few 'Types' and 'Customs,'" at the North Midlands Centre; "Lithography and its Latest Developments," at Liverpool Centre; "The Three-Colour Process in Theory and Practice," at the London Centre; "The Handling of a Sheet of Three-Colour Work," at the Yorkshire Centre; "Colour Photography and its Application to Letterpress Printing," at the Birmingham Centre: "Tin Plate Printing," at the Yorkshire Centre; and "The Training of Apprentices," at the new Edinburgh Centre. In addition numerous social evenings and outings have been enjoyed.

Technical Instruction.

The work of the Department of Technology of the City and Guilds of London Institute has shown steady progress in most departments during 1912, and in those representing the printing and allied trades the number of students has increased. In the last report of the Department, however, the examiners regret to find no improvement in the lithographic students' work on that of last year, and it was noticeable that no statement was made in the report on the progress of the typographical section. Good work is being done in London in the printing classes at the Regent-street Polytechnic, the Borough Polytechnic, the St. Bride Institute, Camberwell School of Arts and Crafts, the Aldenham Institue, and at other centres; while the classes under the control of the L.C.C. at the Bolt-court School of Photo-Engraving and Lithography have entered into possession of their new building, and are now working under ideal conditions. Attention to bookbinding and letterpress work is also being given at the L.C.C. School of Arts and Crafts in Kingsway. In the principal cities and towns of the provinces and in Scotland technical education in the trades we represent is in a progressive state. and the Manchester School of Technology, the Leicester Municipal School of Art, the Central Technical School, Leeds, at the classes in Edinburgh and Glasgow, and in Belfast very successful instruction is being given to large numbers of students. The various associations for the improvement and instruction of the adult printer in his art have done much in their way to further the progress of their members. In London, the L.S.C. Jobbing Guild; in Manchester, the Printing Crafts Guild and the Jobbing Printers' Guild; and in the North, the Cleveland Guild of Printers have all done their part in endeavouring to raise the status of the art and of those who earn their livelihood by it.

In the Law Courts.

Fortunately there were not very many actions affecting printers in the course of the year, but among those that did come before the Courts were one or two that possessed importance to the trade for the decisions arrived at. Perhaps the most far reaching of these decisions was that of the House of Lords in the appeal by Messrs. Vacher and Sons, Ltd., against the London Society of Compositors and others. The plaintiffs sought to recover damages for conspiracy to libel and to cause their firm damage by the publication of alleged false and malicious statements in a document entitled "The Compositors' Fair List and Guide to the London Printing Offices," issued by the L.S.C., and also for libel in a letter. The defendants contended that, having regard to the Trade Disputes Act of 1906, no cause of action could lie against them as a trade union. On their application their name was originally struck out, but Mr. Justice Channell, in chambers, took the view that the point was one not to be decided summarily, but on trial. The Court of Appeal reversed Mr. Justice Channell's decision by a majority of two to one, and Messrs. Vacher then carried the matter to the Supreme Court. The Lord Chancellor, in giving judgment, said that Parliament, by the Trades Disputes Act, put an end to the liability to be used which existed before that Act. "Nothing, as it appears to me," said he, "could be clearer or more explicit than the language of the enactment itself, 'an action against a trade union . . . in respect of any tortious act alleged to have been continued by or on behalf of the trade union, shall not be entertained by any court.' Lord Shaw, Lord Moulton, Lord Macnaghten, and Lord Atkinson concurred, the last-named remarking that they were not concerned with the question whether the Act was wise or unwise, just or unjust, beneficial or otherwise, but had simply to decide the point before them according to the provisions of the Act. An action at the Manchester Assize Courts by Messrs. J. and J. Makin, Ltd., against a former employee of the firm to restrain him from disclosing their business secrets to another firm that had engaged him, occupied the Court for eight days, and resulted in judgment for the plaintiffs with costs. A considerable crop of libel actions came before the Courts, many of them against newspapers, and among the papers cast in damages were the *Star*, *Truth*, *John Bull*, *Liverpool Post and Mercury*, and the *Dundee Courier*. The plaintiffs in many of the cases were not successful and verdicts for the defendant newspapers were given in the actions against the *Penny Illustrated Paper*, the *Pall Mall Gazette*, the *Times*, the *Manchester Daily Despatch*, and the *Belfast Northern Whig*. A case of importance to newspaper men was that in which the editor of the *Daily Express* was summoned to show cause why he should not be committed for contempt for commenting in his paper on a libel action entered against it. In refusing the application for committal, Mr. Justice Phillimore said that to say that a newspaper was to be restrained from passing opinion on a man who was before the public notice just because he had issued a writ, with the date of the trial largely in his own power to fix, was a very great restriction on the Press, and would be likely in many cases to be fraught with danger.

Fires.

The number of fires recorded in our pages during the past year was very small, printers seemingly having been more fortunate than usual in that respect. In London there was a serious fire on the premises of Messrs. Eyre and Spottiswoode, the King's Printers, East Harding-street, E.C., which destroyed a building of several storeys, with a loss of several thousand pounds. A fire broke out at Paul's Pier Wharf, Upper Thames-street, E.C., in a warehouse filled with thousands of tons of paper, the property of the Associated Press. The premises of Messrs. F. T. Pillivant and Co., fancy boxmakers, Old-street, were practically destroyed by a fire, and there was a serious fire on the premises of Messrs. Angus Thomas, Ltd., Moor-lane, E.C., which, unfortunately, resulted in the deaths of a number of the work girls employed in the manufacture of Christmas cards. The works of Messrs. David Allen, Ltd., at Harrow, were damaged by a fire that broke out in the colour store, but which was prevented from spreading to the main buildings. In the provinces there were several fires recorded, among them the paper bag works of Messrs. Quarmby, Chapel-street, Huddersfield, were practically destroyed. An outbreak of fire occurred at the Belper branch of Messrs. G. C. Brittain and Sons, Ltd., printing and stationery warehouse. A fire broke out at Darlington in the printing office of Messrs. Oliver Brothers, considerable damage being done to machinery and paper stock. A fire also occurred at Messrs. Hargreaves and Co.'s cardboard box factory, in Albion-street, Leicester, and in Glasgow fires were responsible for considerable damage on the premises of Messrs. Leggat Bros., printers, and those of Messrs. Jebb Bros., paper merchants. A fire broke out in Dundee, in a store belonging to Messrs. D. C. Thomson and Co., Ltd., publishers, containing a quantity of reels of paper intended for newspaper purposes, the loss amounting to about £5,000.

Business Changes.

Among the business changes noticed during the year were a number of removals into larger and more convenient premises. Among them we noted that Messrs. T. Kendell and Sons, Norfolk Iron Works, Shoreditch, E.C., manufacturers and grinders of knives of all kinds for the printing and allied trades had opened new premises at 17, Whitefriars-street, Fleet-street, E.C. Messrs. Lotz, Abbott and Co. removed from 66, Queen-street, Cannon-street, to 21, Ropemaker-street, Finsbury-pavement, E.C. Messrs. Berrick Brothers, Japanese paper importers, 10, Creechurch-lane, E.C., also removed to 13 and 14, Camomile-street, Bishopsgate, E.C. Messrs. Samuel Deacon and Co., advertisement agents and contractors, established at Snow-hill over a century ago, and who had occupied No. 154, Leadenhall-street for the last 57 years, removed to No. 7, Leadenhall-street. Messrs. Grant, Legros and Co., Ltd., Cumberland-park, Willesden Junction, N.W., in consequence of increase of business, removed their offices from the Willesden works to 78-79, Avenue-chambers, Southampton-row, W.C. Mr. R. Dennis, of 4 and 5, Pilgrim-street, E.C., the well-known specialist in "Pilgrim Grade" of relief stamping, wiping papers and kill and set-off papers, has had to take more warehouse space in the above premises. In March last, Messrs. George Mann and Co., Ltd., printers' engineers, of Leeds, removed their London showroom and works from Kirby-street to Henry-street, Gray's-inn-road, and Messrs. John Swain and Son, process engravers, opened a new branch establishment at 12-14, Bath-street, Glasgow. Among changes in the personnel of firms we noted that the business of the Diamond Tag Co., Abbey-street, Bermondsey-square, S.E., had been transferred by the executors of the late proprietor, Mr. E. H. Brown, to Mr. E. J. Mason, the late manager of the company, who will carry on the business under the same style and in the same premises. Owing to the ill-health of Mr. H. B. Revell, of Messrs. H. B. Revell and Co., 67, Leadenhall-street, E.C., makers of the "Cleartype" dry flongs, "Everwear" press blankets, etc., the business has been disposed of to Mr. William J. Light, of 127, Fenchurch-street, E.C., who will now carry it on under his own name. In this connection we intimated that Messrs. Robert Bateson and Co., papermakers' agents, 127, Fenchurch-street, E.C., had taken into partnership Mr. William J. Light, who holds the sole agency for the "Ideal" Ready Made Stereo Flongs, and who has been associated with that firm for many years. The business will be carried on under its present style. Messrs. R. E. Wilkinson and Sons, photo-lithographers and photo-engravers, of 18,

Bethel-street, Norwich, have amalgamated with Mr. F. L. Coleman, of Aylsham. The new firm has taken larger premises at 30, Bethel-street. Mr. Cecil Arthur Franklin has been appointed one of the managing directors of Messrs. George Routledge and Sons, publishers, and one of the managers of the allied company of Messrs. Kegan Paul, Trench, Trübner and Co. Mr. Chas. H. Ault has resigned his position as managing director of the Ault and Wiborg London Co., and is no longer connected in any way with the firm. The connection between the P. Lawrence Printing Machinery Co., Ltd., 57, Shoe-lane, E.C., and Mr. P. Lawrence was severed on June 30th last. Mr. F. J. Bold has been appointed London manager of the Goss Printing Press Co. of England, Ltd., with headquarters at 53, Fleet-street, E.C.

In the Newspaper World

several new publications made their appearance, of which perhaps the most important were the two new Labour dailies, the *Citizen* and the *Daily Herald*. The *Citizen* is published officially on behalf of the industrial and political forces federated to the Labour party, and the *Daily Herald* goes in strongly for the cause of Labour in general. Among the new publications were also the *Insurance Weekly*, dealing with matters under the Insurance Act; *Everyman*, a weekly literary journal, issued by Messrs. J. M. Dent and Sons; and *Russian Export*, a commercial journal dealing with business matters as they affect trade between this country and Russia. *Black and White* ceased to exist as a separate entity and was absorbed into the *Sphere*. The *Evening Times*, after a short life of eighteen months, also ceased publication. Among the amalgamations that have taken place the *Sporting Times*, which had been in existence for nearly half-a-century, has been acquired by the proprietors of the *Looking Glass*. The *Morning Leader* and the *Daily News* now appear as one paper under the title of the *Daily News and Leader*. The old-established financial journal, the *Citizen*, has changed hands, the new proprietors being the *Citizen* Newspaper Co. During the year the *Illustrated London News* celebrated its 70th birthday, and our contemporary, the *Electrical Review*, attained to its fortieth anniversary.

The Grim Spectre

has been busy during the year, and many well-known men have passed over to the great majority on the other side of the curtain that hides the unseen world from us who are left. Among the novelists who have departed were Mr. Justin McCarthy, Mr. Robert Barr and Mr. Jacques Futrelle, Dr. Andrew Wilson, too, a prolific writer on general hygiene, and a regular contributor to the press died in August, and the death in February of Miss Sophia Cassell removed the last link with the original firm of Cassell, Petter and Galpin, of La Belle Sauvage-yard, Ludgate-hill, E.C., Miss Cassell being the daughter of the original founder of the firm, John Cassell. We had also to record the death of Mr. G. K. Fortescue, the keeper of the printed books at the British Museum. Among the printers in London whose deaths we chronicled were Mr. James William Harrison, head of the firm of Messrs. Harrison and Sons, Printers in Ordinary to His Majesty. Mr. Robert H. Allen, one of the directors of the well-known printing firm of Messrs. David Allen and Sons, of Belfast, London, and Harrow; and Mr. Charles John Letts, senior partner of the firm of Charles Letts and Co., grandson of John Letts, the originator of the first printed diary. We also noted the death of Mr. David Harris, printing ink manufacturer and philanthropist, of the firm of Messrs. A. B. Fleming and Co., Ltd.; Mr. James A. Horne, of the late firm of W. C. Horne and Sons, a gentlemen well known in connection with the allied trades; of Mr. William Powrie, the manager of Messrs. Furnival and Co.'s London house; Mr. Thomas Reeves, general manager of Messrs Bradbury, Agnew and Co.; and Mr. George Richard Willis, who was formerly manager of Messrs. R. Hoe and Co., and afterwards with the Goss Printing Press Co. The death also took place of Mr. Edward Spicer, J.P., chairman of the well-known stationery and papermaking firm of Messrs. Spicer Bros., Ltd., of New Bridge-street, E.C.; and of Mr. J. H. Spicer, who was at one time

a partner in the same firm. We also had to record the death of Mr. W. E. Smith, the well-known manufacturing stationer and printer of Sydney, N.S.W., and London. In the journalistic world there passed away Mr. Henry Labouchere, the founder of *Truth*; Major George Frederick Gratwicke, V.D., an ex-president of the Institute of Journalists; Mr. William Flavelle Monypenny, one of the directors of the *Times*; Mr. F. W. Garrett, a member of the *Financial Times* editorial staff; Mr. A. J. Robertson, the founder and first editor of *Golf*; Mr. James Hope Barnes, a member of the editorial staff of the *Daily Mirror*; Mr. Thomas W. Williams, who was for nearly a quarter-of-a-century editor of the *South London Observer*; Mr. Geo. A. Ferguson, for nearly thirty years a contributor to this journal; and Mr. H. J. Kirton, works manager of the *Standard* and *Daily Express* newspapers.

In the Provinces there died:—Mr. Henry Wilson, of the firm of Messrs. Wilson, Olley and Co., the well-known paper merchants, of Sunderland; Mr. Albert Richardson, wholesale stationer and printer, Durham; Mr. Thomas Ashforth, who for thirty-five years was manager of the Newcastle Branch of the Co-operative Printing Society, London and Newcastle; and Mr. Dudley Payne, the eldest surviving son of the late Mr. Payne, and grandson of the late Mr. David Payne, the inventor of the Wharfedale printing machine. From Liverpool we recorded the deaths of Mr. George Wynne, who for many years was editor of the *Liverpool Mercury*. Mr. William Wetherell, of the editorial department of the *Liverpool Post and Mercury*, and Mr. Thomas Frederick Towndrow, who was for nearly fifty years connected with the *Journal of Commerce*. We also noted the decease of Mr. E. G. Barnard, principal leader writer on the staff of the *Sheffield Daily Telegraph*; Mr. W. H. Wolstenholme, the oldest journalist in Huddersfield; Mr. William Milner, one of the proprietors of the *Lancaster Guardian*; Mr. George Hood, one of the pioneers of journalism on Tees-side; Mr. Henry Hughes, proprietor and editor of the *Free Press of Monmouthshire*; Mr. George Fellows, senr., proprietor for many years of the *Isle of Wight Herald*; Mr. James Motes Atkins, proprietor and editor of the *Wells Journal*; Mr. W. E. Nash, for many years proprietor of the *Brighton Times*; and Mr. John Wardley, the first proprietor of the *Darwen News*. We had also to chronicle the death of a member of our staff, Mr. Thomas Foster, of Manchester, who since August, 1902, had acted in the capacity of representative of this journal in the Lancashire and Yorkshire districts.

In Scotland

the death roll was rather a long one, and included many well-known names. Among them were those of Andrew Lang, the well-known author and critic; Mr. William Blackwood, editor of *Blackwood's Magazine*; Mr. Edward Hanson, of the firm of Ballantyne, Hanson and Co., printers and bookbinders, Paul's Works, Edinburgh; Mr. Daniel Macfarlane, of the firm of Macfarlane and Dickson, stationers, Edinburgh, and one of the oldest booksellers in that city, Mr. Andrew Stevenson. The deaths also occurred of Mr. Colin M'Donald Smart, head partner and editor of the *Perthshire Courier*; Mr. William Russell, editor and proprietor of the *East of Fife Record*; Mr. Daniel Wylie, one of the proprietors of the *Stirling Sentinel*; and of Mr. William Bowie Cook, editor and part proprietor of the same paper.

From abroad we notified the deaths of a number of well-known men, including Mr. James Kemsley, editor of the *Port Elizabeth Telegraph*, and Mr. Ramsay Collins, principal proprietor of the *Natal Mercury*. In the United States there passed away Mr. F. R. Hilton, the president of the *Inland Printer* Co., Chicago, and Mr. Isaac K. Funk, head of the publishing firm of Funk and Wagnalls, of New York. Two famous Paris publishers died in the persons of M. Edouard Pelletan and M. Chardin. Germany gave up Georg Meisenbach, the man who made the half-tone block a commercial success. Many other notable men passed away, but space forbids our lengthening the list.

For the same reason we must close our brief and incomplete summary of 1912, and conclude by wishing all our friends at home and abroad (and they are many)

A Happy and Prosperous New Year.

Olley's Prosperous Year.

Satisfactory State of the Printing Machine Trade.

There can be little doubt that the town of Otley, from where more printing machines are turned out in the course of the year than from any other town in the British Isles, is receiving its full share of the "trade boom" which is now passing over the country. Indeed it is now some time since the Otley employers experienced a slack time, but if one may judge from the amount of overtime that has been worked and the fact that during a part of the year one of the firms has employed a portion of their workpeople through the night as well as the day-time, the past year has been one of the most successful that the Otley makers have experienced. This prosperity, too, has not been confined to the printing trade, but has also extended to the papermaking industries, and also others that are allied to the machine trade, such as the manufacture of roller composition, roller casting, and the sale of type washes and printers' sundries. Orders have flowed in with such satisfactory regularity that in some cases it has not been found necessary to sent out a representative during the whole of the twelve months.

"Wharfedale" machines are now manufactured all over the world, as when the principle of a moving bed and fixed cylinder was first introduced the name was not protected, and the title now applies to a type of machine rather than to the locality in which it is made. "Wharfedales," however, continue to be turned out from Otley, their original home, in ever-increasing numbers, until it becomes a matter for wonder as to where they all go to.

Of late years the Wharfedale machine has been so modified and brought up-to-date that the makers are now able to successfully compete with their American and other rivals. Machines for turning out the highest class o work at a good rate of speed are taking the place of earlier-made machines. The introduction of the process block was the means of creating a revolution in the manufacture of printing machines. A better inking arrangement and a more solid impression was required in order to successfully reproduce pictures, and it was to these ends that the Otley makers sought to attain. That they have reached it is amply evidenced year by year. There are now more workpeople engaged in the industry in Otley than was ever previously the case, and some difficulty is experienced in finding really good men.

Owing to this increasing volume of trade, and the fact that the makers have been kept fully engaged in coping with the orders, there has been little time to devote to the introduction of new inventions. It is nevertheless a fact that hardly two machines go out from Otley exactly alike, as minor improvements are continually being effected, and machines are built to suit customers' special requirements. A new delivery over the ink duct with tapes has been fitted on to Messrs. Elliott and Co.'s machines, and other similar improvements have been carried out by other makers. Reports from the various firms differ very little, all being agreed that the past year has been prosperous, and they are looking forward to a similar one in the future. Additions and extensions are being made in one or two instances in order to cope with the increased demand. Messrs. J. W. Potter and Co., for instance, are having a new engine shed built. The old steam engine will be discarded, and a new "National" 38 horse-power gas engine will be installed in its place. This, it is believed, will give about double the power, and will be a more economical method of working.

One point of interest ought to be noted here. This is that the makers are realising the importance of up-to-date tools in order to cope with the more modern methods of manufacture. Some thousands of pounds have within recent years been spent in this direction, and there appears to be a commendable keenness in keeping well to the front. There was a time when America led the way in this respect, but this reproach is no longer true.

Coming to the various markets to which the machines are dispatched, these vary very little from year to year. Some of the firms deal mainly with the home trade, but it is a fact that on all sides the export trade has lately been developed enormously. The over-sea Colonies, including Australia and New Zealand, are amongst the best customers. A large number of machines go to the Far East—China and Japan—whilst others are dispatched to the Continental centres, including France, Belgium, Germany, Holland and Italy. Norway and Sweden take a fair proportion, and Greece has lately purchased one or two.

With such a general increase in the price of material as has been experienced during the last 12 months there will be little surprise that the cost of production has advanced very considerably. This has been enhanced at Otley by a rise in wages. Pig iron is now 23s. per ton more that it was before the coal strike, and bar iron has gone up in corresponding ratio. Coal, coke, wood and copper have advanced about 20 per cent., and there is no probability of any decrease in the near future. It therefore naturally follows that there has had to be an advance in the price of the finished article.

It is worthy of note that there has been a big run on the smaller sizes of machines. Last season it was the larger ones for which there was the greater call; this year it is the reverse.

Messrs. J. R. Thompson and Co. continue to do a flourishing business in printers' sundries at their new works in East Busk-lane, Otley, to where they removed from Leeds. Their roller-casting business is now extending over seas, and reaches as far as India and Australia. The home trade continues to grow in spite of the fact that they have not had a representative on the road for over a year. Only recently they supplied the Government of South Africa with a quantity of their "Pearline" for the washing of type after printing.

MESSRS. ARROWSMITH, LTD., process and wood engravers, of 2, Charterhouse-street, E.C., have removed to larger and more commodious premises at 26, Gray's Inn-road, W.C. The firm's new telephone number is "5,772, Holborn."

TWO THOUSAND London sandwichmen were entertained at a Christmas dinner at the Alexandra Trust, City-road, E.C., on the evening of the 23rd ult., through the fund promoted by *Reynolds's Newspaper*. The King and the Prince of Wales each sent a cheque for £10 towards the dinner.

AN American contemporary advises printers as follows:—"If you do much perforating, secure a quantity of sheet zinc from a hardware merchant and place a narrow strip of the metal where it will receive the impression of the perforating rule and then glue it into position. You will find the results will more than pay you for your expense and trouble, and the wear upon the rule is also lessened by the use of the metal backing."

Safety Bronzing Cabinet

Patent No. 11291/10.

Cabinet Open, and showing Detachable Tray.

BEST QUALITY WORK
NO DANGER TO OPERATOR
NO WASTE OF BRONZE
INCREASED OUTPUT

THIS Bronzing Apparatus has been introduced to enable Bronze Powders, etc., to be applied by hand without any particles of powder floating about the room, or being inhaled by the operator.

It consists, as shown in the illustration, of a box fitted with hinged transparent top and transparent ends. The side nearest the operator has apertures fitted with flexible sleeves with springs to close round the wrists of the operator, so that, although his hands and arms are free to move inside the box, no powder can escape.

The bottom of box is perforated and allows the surplus powder to fall into a detachable tray underneath. The sheets or cards to be bronzed are fed direct from the platen into a narrow horizontal slit fitted with sloping feed board.

This apparatus is made throughout in our own Works, and the edges of the lid and detachable parts are made dustproof. There is no waste of bronze and no injury to the health of the operator, and nothing to wear out. The bronzing is executed immediately under the eyes of the operator, ensuring finest quality work.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Best swishes for the New Year.

o o o

Why not swishes? A swish is a whip-up. And we all want a whip-up at times. We all get into grooves.

o o o

All except Mr. Rudd, perhaps I ought to say. A contemporary will have it, writing about that alert printing manager of the *Illustrated London News*, that he at least is not groovy — that "the difference between a Rudd and a rut is—pronounced."

o o o

Those of us who work too hard need our best New Year's swishing. I have a good friend, and very prosperous, who habitually estimates his printing jobs or revises or writes business letters half through Sunday. He's such a thoroughly good sort that even if he sees this note he won't complain; nor even though I end it by recalling how Morlais Jones, the greatest preacher I ever heard, would deal with Sunday labour after his own terse manner. "You ask me, 'Am I wicked because I work on Sunday?' Wicked! No. You're not wicked. You're *a fool*. That's what you are."

o o o

My first suggested New Year's resolution—not so much and not so long a-slaving at the oar. A man's duties include a duty to himself.

o o o

Time-system as applied to one's own work is a great help. Let me give a hint or two. Adopt a time chart for your own "jobs"; put a cross in the place, week or day, by which such and such a thing "shall be done." And again, when there are a dozen jobs competing for one's personal care, it may be a real help to allocate half-hour to job A, when (sharp on the tick) job A shall be put aside for at least half an hour even if A has hardly been started in its 30 minutes; the second half hour on the second job B, in turn to be swift-cut off, whatever the stage, for a third job to have next its definite term. Perhaps A again, perhaps C.

o o o

To be sure each man must work in his own way. But I testify that I have often been helped by this plan in the else trying ordeal of labouring to get a dozen unwelcome things done and done "all at once," as we say.

o o o

If your troubles come in scores,
Keep them waiting out of doors,
And never let your mind be overrun.
And you often will forget,
How many woes beset,
Having all your eyes and all your wits, ON ONE.

o o o

Best wishes then for the New Year for all of us in the craft. I will omit the "s" this time. Best wishes for us all. We all at best have burdens heavy enough. We all, too, have more in common than we have in difference. We are none of us very wise. Perhaps, too, we none of us have always all the courage needed to act up to even such wisdom as we do possess. Let us go on with increasing self-respect and with all the mutual respect that is possible; giving to life of our very best; and calling upon life to give of its very best to us.

o o o

As to its material rewards let us be "contented wi' little though cantie wi' mair." The trend towards greater equalisation of fortune between master and man is a trend we cannot prevent; if it were well for it to be prevented. Times change, and willy nilly we change with them; if we are not too unwilling to meet the new experience we may find that the changing is very beneficent, in a world which as Franklin in his old age reflected is all the time "growing wiser and wiser."

FRANK COLEBROOK.

MR. JOHN OAKLEY, assistant editor of the *Sheffield Daily Telegraph*, has been appointed editor of that journal.

Current Topics.

IN future the *Weekly Times and Echo*—established in 1847—will be amalgamated with *Reynolds's Newspaper*.

ACCORDING to the *Bookseller*, the number of books issued in 1912 is 10,477, or if 130 second and subsequent editions be included, 11,778.

TENDERS are wanted by the Chiswick Urban District Council for stationery, etc. Forms of tender from Mr. E. Willis, A.M.I.C.E., Town Hall, Chiswick.

THE District Council have passed plans for a new envelope department and additions to card department at the works of Messrs. John Dickinson and Co., Ltd., at Hemel Hempstead.

MR. F. ST. GEORGE GRATWICKE has been appointed managing editor of the *Devon and Exeter Gazette* in succession to his late father, and Mr. W. G. Willis Watson, brother of Mr. E. J. Watson, of Bristol, is the new assistant manager.

ACCORDING to *Kemp's Mercantile Gazette*, the number of failures in the printing and stationery trades reported in England and Wales for the week ending Friday, December 27th, was one; the corresponding week of 1911 showed none The total number of failures in these trades during the past year was 205, as against 212 in 1911.

IN the list of New Year Honours, published yesterday, there appear among the new Knights the following: Mr. Rowland Bailey, C.B., M.V.O., I.S.O., who has been Controller of the Stationery Office since 1906; Mr. T. Dods-Shaw, for many years a Parliamentary journalist, and first editor of the Official Debates of the House of Commons when they came under Government control.

AT the annual meeting of Messrs. Waterlow Brothers and Layton, Ltd., Mr. W. A. Waterlow said that they had under their contract to deliver, by June 30th last, 400,000,000 stamps in nine different values and colours. Up to May 19th they had not received a single plate for printing the stamps—they were made by the Government. There was only one thing which would have delayed the Act coming into force on July 15th, and that would have been if the stamps were not ready. There was no hitch, and the stamps were ready for delivery on the day stipulated. Mr. Waterlow added that the company was to print the high value postage stamps—from 2s. 6d. upwards—for the Government.

THE trial was concluded, last week, in the Court of Session, Edinburgh, of the action brought by James Thornton, a Dundee police-sergeant, claiming damages for alleged slander from Edwin Scrymgeour, editor, and John Pellow, printer, of the *Scottish Prohibitionist*, a Dundee weekly publication. The jury were asked to decide whether Mr. Scrymgeour falsely and calumniously said he had seen the plaintiff drunk on a specified occasion, and whether certain articles in the *Scottish Prohibitionist* were concerning the plaintiff, and were false and calumnious. The jury returned a unanimous verdict for the plaintiff on both issues, and assessed damages at £60 on the first issue and £125 on the second.

Mr. James A. Horne.

We deeply regret to announce the death of Mr. James A. Horne, who passed away, after a comparatively short illness at the early age of forty-four years. Mr. Horne assisted his father and brothers in the late firm of Messrs. W. C. Horne and Sons, as director and general manager, and for several years he had entire charge of the Leipzig branch of that firm, which was one well-known to printers, bookbinders, box-makers, and others in this country and on the continent, as well as in the colonies. For the past eight years Mr. Horne has not been actively connected with the allied trades, having been engaged in building and marketing a machine of his own invention for placing labels and wrappers round tins, etc. He had travelled extensively all over the world, and had charge of the W. C. Horne exhibits at many of the earlier exhibitions, where, in almost every case, he obtained the highest awards. Mr. Horne was greatly interested in the Church Lad's Brigade (holding the rank of captain) and was highly esteemed by a wide circle of friends both in and out of the printing and allied trades. Although he had no business connection with the present firm of Smyth-Horne, Ltd., he was an elder brother of Mr. Roderick W. Horne, the managing director.

THE death occurred on December 26th of Mr. W. J. Fuller, a well-known printer, of Gravesend. The deceased, a native of Bedfordshire, was 53 years of age. In conjunction with Mr. John Higgins, printer, of Grays, he started printing and stationery establishments in Gravesend and the neighbouring town of Northfleet, which under his energetic control, extending over 25 years, achieved considerable success. He leaves a widow, two sons and two daughters.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Jan. 1st, 1913.

PRESSURE for money has been very heavy since the resumption of business after the Christmas holiday, and the market has considerably increased its indebtedness to the Bank of England, paying 5½ per cent. for a week. Rates in the outside market are high, borrowers readily paying up to 5½ per cent. for over-night loans, and 6 per cent. being paid in some quarters. The tendency in the discount market is easier. Bullion movements have resulted for the week in a net influx to date of £100,000. Stock markets closed down for the holidays in excellent tone. On re-opening on Friday the undertone was satisfactory, and the new account opened quite cheerfully. Business of course has not become brisk, but the good tone was maintained until the eve of the customary New Year's holiday to-day. The carry-over was in progress in the Consol market yesterday, and the rate charged was about 4¼ per cent. Consols finished firm at 75⅛ to 75¼ for money, and 75 1/16 to 75 1/16 for the new account.

The miscellaneous industrial market is generally firm, though with another holiday so near business has not developed activity. Movements in the section relating to paper and print have included a rise in Raphael Tuck and Sons Ord. of 1/16 to 2/32—1 3/32, and falls in Ilford Ord. of 1/16 to 9/16—11/16, and in Waterlow and Sons Def. Ord. of 1 to 25—27. Business has been done in Ilford Ord. at 12s. 9d.; in International Linotype at 78¼; in Spicer Bros. Cum. Pref. at 9⅜; in Raphael Tuck and Sons Ord. at 19s. 9d.; in Waterlow Bros. and Layton Ord. at 6xd., and in Weldons Ord. at 32s. 6d.

NEW COMPANIES.

F. GRUNEISEN AND CO., LTD.—Registered with a capital of £25,000, in £1 shares (20,000 five per cent. cumulative preference) as bookbinders, stationers, publishers, paper merchants, etc.; to acquire the business carried on at Cross-street, Islington, and Wilson-street, Highbury, N., by F. J. C. Gruneisen and G. R. Hall Caine, as F. Gruneisen and Co. Private company.

FISHER BOOKBINDING CO. (1912), LTD.—Registered with a capital of £25,600, in 1,000 six per cent. cumulative preference and 4,000 ordinary shares of £5 each and 2,000 deferred shares of 5s. each, as bookbinders, gilders, marblers, printers, publishers, etc., and to adopt an agreement with the Fisher Bookbinding Co., Ltd.

SPORTING AND FINANCIAL PRESS, LTD.—Registered with a capital of £25,000, in £1 shares (10,000 preference). To take over the newspaper known as *Sporting Luck*, carried on by Lucien Stokvis, at 24a, Whitefriars-street, E.C., and to carry on the business of sporting and financial publishers generally. Private company.

COMMERCIAL INTELLIGENCE.

JOHN HENRY NICHOLSON,
Stationer and Librarian.

This debtor appeared recently for examination at the Scarborough Bankruptcy Court, before the Registrar, Mr. F. Bedwell. It appeared that the debtor had carried on business at 16, Chapel-street and 18, West-street, Bridlington. He returned gross liabilities £172 11s. 5d., assets £41 3s. 9d., less preferential creditors £11 7s. 8d., deficiency £142 15s. 4d. Examined by Mr. J. L. Poland, the assistant official receiver in bankruptcy, debtor said he had traded at Bridlington under the style of the Ulla Society. He commenced business at 18, West-street, with a borrowed capital of £10, in April, 1911, and in June last he opened a shop at 16, Chapel-street, Bridlington, borrowing further capital to the extent of about £50 in all. Asked as to the causes of his failure, he said: Some people in a hurry for their money, I should say. The assistant official receiver suggested starting on borrowed capital, bad trade, and keen competition, and debtor agreed. He had had arrangements with people in the town for lending them books prior to opening the shops. He simply traded as "The Ulla Society," as "a trade mark." He had not been known by any other name in this district. The deficiency, he said, was brought about simply by the shops being thrown upon the market, and consequent depreciation. He admitted that having borrowed money he could not have paid his debts if he had been called upon, but he had made a profit of £55—he was making money all the time—100 per cent., that was on the capital. He had drawn about 30s. a week. He had no money put away, nor was he expecting any under any reversion. The examination was closed.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

DISTRIBUTION OF ASSETS.

PLATFORD, A. W., late of 18 and 20, Booth-street, and 39-41, York-street, Chorlton-upon-Medlock, Manchester, law stationer and printer. Claims by January 31st to Boote and Dutton, 22, Booth-street, Manchester, solicitors for the administratrix.

Throw the Stereo Rotary on the Scrap Heap

Turin, 1911. **Grand Prix.**

A PRESS FOR EDITIONS UNDER 12,000.

The Cost of Stereotyping of a Newspaper of Medium Circulation amounts to about £250 a year.

This sum is saved annually by the

SWISS-DUPLEX,

which delivers direct from type forms 5,500 to 6,000 complete copies per hour of 4, 6, or 8 pages, printed, pasted, folded, and counted, without stereotyping. Our Swiss-Duplex Type 1910 is a considerable improvement on every other system, and is guaranteed to yield faultless work on any printing paper, equally as well as any other Rotary. The new path of web avoids splitting and makes possible accurate register. The SWISS-DUPLEX has stood the test of 20 years' service, and is the most useful and practical Flat-Bed Rotary in the World. The smart publishers have printed medium sized editions for years on the SWISS-DUPLEX, and have discarded the Stereo Rotary, consigning it to the lumber room.

Any printing press engineer is able to fit up the machine. Detailed plans of erection and hints to pressmen are supplied.

Quick Delivery. Easy Terms. Send for Prospectus, Testimonials and Price.

Our New Style.

WITH the present issue we inaugurate a new series, on the lines foreshadowed in an announcement printed in the *British and Colonial Printer and Stationer* some three months ago. During the intervening period, we have received many letters dealing with the forthcoming change of size, and our representatives have also been the recipients of numerous verbal communications on the same subject. Without an exception, they have been in favour of the new departure we proposed making, and thus we felt no hesitation in adopting it on the lines previously indicated. This is the second occasion on which the size of the paper has been altered, the first one being from the original 8vo. dimensions in which the journal was published from the start in 1878 to the end of 1881. On January 4th, 1882, the size which we have just abandoned made its appearance for the first time, in No. 74. From that date to the present issue—which is numbered 1,788—is indeed a far cry, but the aims and intention of the founder of the *British and Colonial Printer and Stationer* have been consistently adhered to from the start, except that the stationery element does not now receive so much attention as formerly, that branch of the allied trades having been since provided with several periodicals of its own. No member of our existing office staff was on the paper when its first weekly issue went to press, partly under the auspices of the late Mr. John Southward, the well-known printing trades' journalist. The present writer, however, dates his service from the latter part of 1882, when the weekly issue was still somewhat of a novelty, and one of the first things that was brought to his notice on entering the office, now more than 30 years ago, was a card on which was printed the following brief admonition to the staff:—

"No spite. No puff.
If in doubt, leave out."

This advice, whether original or not, was carefully followed by those who then conducted the paper, the tradition of it has descended to their successors, and will, we trust, be handed on. A first issue, even though it be only that of a new series, is proverbially imperfect, and we do not claim that the one which the reader is now perusing is any exception to the rule. We hope, however, to get our "new style" into thorough working order within the next week or two, and shall make it our endeavour to still present the printing and allied trades with a real, live, readable weekly newspaper. It is thus without any undue feeling of self-elation that we include ourselves in the wish we extend to our many readers—"A HAPPY AND PROSPEROUS NEW YEAR, and many of them!"

* * *

The London Areas for the Shops Act.

THE question of fixing areas in the county of London for the purpose of applications to the London County Council for exemption and other Orders under the Shops Act, 1912, has been thoroughly investigated by the Public Control Committee of the Council, and a decision has now been arrived at. The various London trade organisations were invited to submit suggestions for the defining of areas, specific questions being put to them Out of 124 trade organisations addressed replies were received from 58, a rather small proportion, especially as 18 of these offer no suggestions. It may no doubt be assumed, however, that many have not replied because they regard their respective trades as being unaffected, as was indeed pleaded in excuse by some of those who replied without expressing an opinion. After careful consideration of the views submitted, the Council has decided that any Orders which may be made under the Act shall apply to any one or more of the undermentioned areas, save that, as regards Exemption Orders, other areas may be agreed to in very exceptional cases:—

(i.) The County of London (exclusive of the City of London).

(ii.) A central area north of the river Thames, bounded as follows, the shops in the boundary thoroughfares named being included in the area.

East.—The boundary of the City of London (from the river Thames to Holborn) and thence along Gray's-inn-road to King's Cross.

North.—From King's Cross *via* Euston-road, Marylebone-road and Chapel-street, to Edgware-road.

West.—From Chapel-street *via* Edgware-road, Park-lane, Grosvenor-gardens, Buckingham Palace-road and Commercial-road to Chelsea Bridge.

South.—The river Thames.

(iii.) A northern area comprising the portion of the County of London (exclusive of the City of London) north of the river Thames, with the exception of the central area mentioned in (ii.) above.

(iv.) A southern area comprising the portion of the County of London (exclusive of the City of London) south of the river Thames.

It is desirable that any future application to the Council for exemption or other Orders should apply to one or more of the areas specified. We understand that the Council is also taking informal preliminary steps to ascertain the views of the occupiers of the various classes of shops as to the making of Orders fixing the day of the weekly half-holiday, and as to the day or days (other than Saturday as an alternative) to be specified in such Orders, if made, and it is suggested that the day to be fixed (other than Saturday as an alternative) should be Thursday for both north and south of the Thames. If this suggestion is found to be fairly generally acceptable, the proper steps will be taken to ascertain definitely as required by the Act, whether a majority of the shopkeepers of each class in each area is in favour of the proposed Order, and, if so, the Order can then be made.

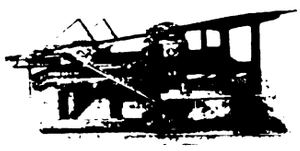
The Preservation of Paper.

THE preservation of paper is a subject which the American Library Association has

Digitized by Google

taken up with a view to reporting on the methods of preserving newspaper files. The "deterioration" of paper engaged the attention of the British Society of Arts, as far back as 1898, a committee being appointed to report on the subject. In a paper recently submitted to the American Library Association, by Mr. John Norris, that gentleman really touches the crux of the whole subject in a few lines. He says: ". . . use a better quality of paper . . . it particularly concerns the paper manufacturer. To say that the paper commonly used in our public and historic records is not good enough for the purpose is no reflection on the skill or honesty of the men who make it. *The quality is determined by the customer, not by the manufacturer*, and the consideration which seems to be most effective in reaching the conclusion is the one of price." That about sums up the manufacturers' answer to all the denouncing phrases that have been made from time to time. The publisher, like the newspaper proprietor, wants the cheapest paper he can get to serve his purpose, "while the manufacturer is just as naturally disinclined to furnish an imperishable article for a very perishable consideration." At the bottom of all these investigations about the deterioration of paper lies the question of £ s. d., and to obtain a good lasting paper a good price should be paid for it. Newspaper proprietors do not consider the needs of libraries in their cities when purchasing "news," neither do the publishers when they are turning out a volume of interest to the public. They study their profit and loss account. Paper manufacturers are ever ready to carry out orders, whether they be small or large, and these are treated in a manner according to the customer's requirements and pocket. The British Society of Arts gave some hints in 1898 as to the "normal standard of quality for book papers required for publications of permanent value" which are worth quoting. They specify as follows: "Fibres: Not less than 70 per cent. of fibres of cotton, flax, hemp. Sizing: Not more than 2 per cent. rosin, and finished with the normal acidity of pure alum. Loading: Not more than 10 per cent. total mineral matter (ash)." With regard to the written documents, the Society maintains that the proper materials are those of cotton, flax and hemp, and that the paper should be pure, and sized with gelatine.



THE January number of *Pearson's Magazine* is an excellent one, full of good fiction and interesting articles, while the illustrations are up to the usual high standard.

"A year ago I had the privilege of studying the press-room reports of a well-known printing concern. I noticed that for 15,000 hours of press running time, they had 10,000 hours of make-ready time."

—From a Printer's Address.

If you are not a Miehle user, we suggest that you examine your job tickets and note the high proportion of time occupied in make-ready compared with the time spent in actual machining.

The Miehle reduces make-ready to the absolute minimum and raises the quality of the product. Ask users.

Printers' Managers and Overseers ASSOCIATION.

NORTH MIDLANDS CENTRE.

The North Midlands Centre held their usual monthly meeting on December 21st, at the Queen's Hotel, Nottingham. Owing to the nearness of Christmas there was not the usual number present, but what they lacked in numbers was made up in enthusiasm, when Mr. Harold Lewis, B.A., of the *Nottingham Guardian*, lectured on "The Production of a Modern Newspaper," dealing with the following points:—A few leading landmarks in newspaper history; examples of early newspapers and first numbers; an analysis of the complicated processes of obtaining news, concentrating it at the newspaper office, and preparing a newspaper from it.

The President (Mr. Chas. G. Budden), in introducing the lecturer, pointed out that the Centre was fortunate in securing the services of Mr. Harold Lewis, B.A., who is well known in the literary world as an erudite scholar, writer, critic, and reviewer of every kind of literature. Those present no doubt had a treat in store in listening to Mr. Lewis, for there were few more capable of dealing with the subject of his lecture, from an interesting as well as an educational standpoint.

The Lecturer said his task was to explain the widespread co-operation of human effort which goes to the production of a modern newspaper down to the point at which the copy is handed over to the printer. Before doing so he pointed out a few leading landmarks in newspaper history. The oldest English newspaper is the *London Gazette*, established in 1665, and since published as the channel for Government and legal notices. The earliest prototype of a newspaper was created by the military organisation of the Roman Empire, which led to the employment of hundreds of scribes to make copies of what may be called "army orders," for transmission to the different provinces, under the name of "Acta Diurna," or Daily Proceedings. In mediæval Venice, about 1536, a similar staff of scribes was established to prepare a periodical record of notable events, which was called "Notizie Scritte," and was sold for a copper coin known as a *gazeta*, whence the widely used term "Gazette" for a newspaper.

There are two prevalent errors which it seems impossible to kill. One is that news is a portmanteau word invented from the points of the compass—N.E.W.S., but in truth the word was for a long time spelt newes, that is the plural of new. It is just the French word *nouvelles*, adopted by the earliest romancers, and still used by us when we speak of a work of fiction as a novel. Another error is that the earliest English newspaper dates from the time of the defeat of the Spanish Armada, and that a copy of the "English Mercurie" containing that intelligence is preserved in the British Museum. The story is a fabrication and the document in the Museum is a forgery. The era of the "Mercuries," small tracts of four pages of about the size of the *London Gazette* of to-day, was half-a-century later.

The gradual evolution of English newspapers was traced by the exhibition of specimens from the lecturer's collection of what they were about the end of the seventeenth century, in the early years and towards the end of the eighteenth century, and about the middle of the nineteenth century, and copies of No. 1 of various interesting newspapers were shown.

The lecturer then sketched the organisation of the literary departments of a newspaper office, the various methods of collecting news at home and abroad, and the various agencies which have been formed to supplement the arrangements of each individual newspaper for getting it to the office by post, by rail, by telegraph and by telephone. The responsibilities and anxieties of editorial work were illustrated by anecdotes within the lecturer's personal knowledge, and among other topics the province of illustrations in relation to newspapers was touched upon.

After the lecture, which was followed closely by those present, a lively discussion took place, relating to the moral influence of our daily newspapers, which led up to many interesting expressions of opinion, the general feeling being that there was room for a newspaper that would give accurate and unbiassed reports on matters of municipal, political, and national interest. Another point raised was the illustration of our newspapers, which brought forward many comments.

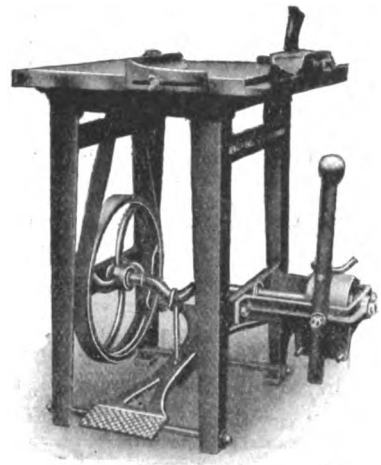
An interesting and valuable meeting was brought to a close with a hearty vote of thanks to Mr. Lewis for his lecture, which was much appreciated.

LIVERPOOL AND DISTRICT CENTRE.

The December meeting of the Liverpool Centre of the Printers' Managers and Overseers Association was held at the Hanover Hotel, Liverpool. The President (Mr. H. Firth) presided over a good attendance. Mr. R. Alexander was elected to membership.

The hon. secretary (Mr. James N. Poole) gave reports from some of the other Centres with regard to the custom of the trade as recognised in legal circles and the rules of the federated unions. An animated discussion followed, Messrs. Stephenson, Pitney, Stewart, Fox, Watson, Walton, Wilson, and others taking prominent part, and the following resolution, proposed by Mr. J. E. WILSON, seconded by Mr. WILLIAM STEWART, was passed unanimously:—"That the Liverpool Centre in general meeting assembled recommends the Parent Association to insist upon the enforcement of the Association Rule for a month's notice under all conditions."

Councillor Ross-Clyne, of Manchester, gave a lecture, entitled "The Story—and Some Stories—of the Press." He prefaced his lecture with an account of the inception of the first newspaper—the methods of sending news in the olden days, news-gathering, reporters, sub-editors, editors, proprietors, advertisements, the telephone and telegraph, English *versus* foreign newspapers, interviewing, the Press—the monument of truth, the foreman printer, and the printer's devil. The lecture, whilst showing all the difficulties of newspaper production, was given in Councillor Clyne's wittiest vein, and the anecdotes of the numerous celebrities of the journalistic profession were well chosen, and met with hearty approval from a critical audience. A vote of thanks to the lecturer was proposed by Mr. WM. STEPHENSON, seconded by Mr. A. BURNS, and supported by Messrs. J. E. Wilson and Coates, the wish being expressed that Councillor Clyne would give another lecture, to which the ladies would be invited, before the close of the session.



Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

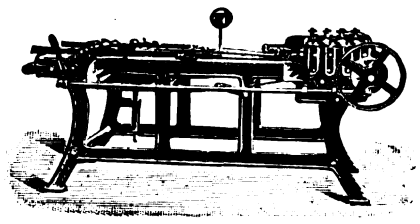
Printers and Fire Losses.

The Importance of Being Prepared.



One of the greatest disasters that can befall a printer is to have his premises either wholly or partially destroyed by fire. His business is practically paralysed for a season, he risks the loss of customers, and, above all, unless he is properly prepared to meet the insurance companies with a clear and indisputable statement of his loss, he stands to lose considerably, even if his insurance policy has a full covering value for the stock destroyed. A printing office in this respect is almost in a worse position than the workshops where other businesses are carried on; the amount of material required for carrying it on is so varied, so costly, and of so many different values, even in the types, which may range in cost at anything from 1s. to 5s. per pound, that often considerable amounts of such valuable stock which has been out of use for a time is quite overlooked in making up a fire claim, at all times a difficult thing to do, but always rendered more difficult if there is not a concise and correctly priced inventory that can be produced. When a fire occurs a list of every item destroyed must be produced, and the value of each individual item must be proved. Thus the assured has to supply at his own expense a complete schedule of the articles destroyed, together with the value of each individual item at the date of the fire, and also must furnish the insurance company's assessor with full proof as to his statements. Let the average printer think for a moment of how he would manage to comply with these requirements and he will understand how it would be almost a matter of impossibility, unless he had been wise enough to have had in his possession a properly prepared and attested inventory by an independent valuer of repute. In the case of machines it is quite difficult enough to prove its value, although there is generally some trace of its existence to be found, but when it comes to the general material of a printing office, such as type, wood letter, brass rule, ornaments, furniture, fittings, galleys, chases, stones, plates, etc., all of which may be so destroyed as to leave no evidence of their existence, then it becomes an imperative necessity to be able to prove that such things did exist before the conflagration. The printer must also remember that at such a time all his efforts would have to be devoted to the task of retaining his connection, and would have but little time to devote to the settlement of his claim, and unless the assured could prove his loss, the matter would have to become one of compromise or arbitration, with heavy expense and probable subsequent loss. It is here that the properly prepared valuation comes in, and is taken as the basis of settlement with satisfaction to both sides. The printer must also note that it is equally important that his policy is correctly worded, and that the articles to be insured are properly covered and the right amounts allotted to each item. An inventory carefully prepared and a policy properly worded are safeguards that should in no case be neglected, as, apart from its use in relation to fire claims, it might also be used for other purposes, such as company flotation or probate. In writing the foregoing notes on a subject so important to the allied trades, we have had in mind the fact that Mr. Robert H. Ruddock, printers' auctioneer and valuer, and fire loss assessor, 71, Fleet-street, E.C., undertakes the preparation of inventories, and examination and revision of fire policies for the trade, and has carried out such valuations with much satisfaction to printers in all parts of the country, and is in possession of testimonials from some of the leading firms in the trade for whom he has done such work. In a little booklet issued by him he sets forth clearly the necessity of being prepared in case of loss by fire, and makes useful suggestions that should be of great service to all who require to insure their plant. Mr. Ruddock will be pleased to see at his Fleet-street office any master printers or other members of the allied trades who desire to consult him on questions relating to insurance, inventories, or fire assessments.

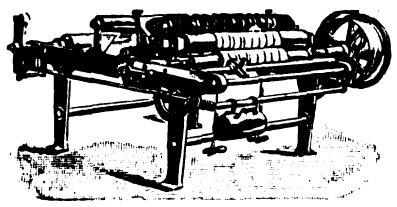
Maschinenfabrik, Dusseldorf-Reisholz.

SPECIALITIES.



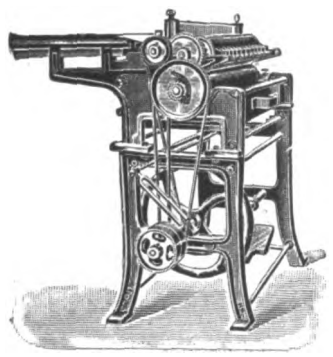
Rotary Folding Box Glueing Machine.

SPEED 200-250 PER MINUTE, or 150,000 IN 10 HOURS.

ANY SIZE BOX, from 1¼ in. wide up to 9¼ in., can be SATISFACTORILY dealt with on this machine; these measurements are in the flat and after being folded; recommended for square and tuck-in-end, plain or embossed boxes. Quickly Adjustable, Simple Construction, Automatic Feeding, Glueing, Folding, Pressing, Drying, and Delivering.

Slitting and Re-Winding Machine.

Cutting any Material from Wax-Paper to Tag Stock.

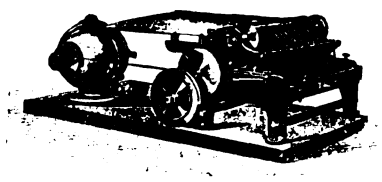


Also Machines for cutting Rubber, Calico, and Insulating Material.

Producing CLEAN, STRAIGHT, and DUSTLESS ROLLS, and RE-WOUND TIGHTLY.

Also Toilet Paper Cutting and Printing Machine.

Adjustable from ⅜ in. wide upwards. Working width from 6 in. wide upwards.



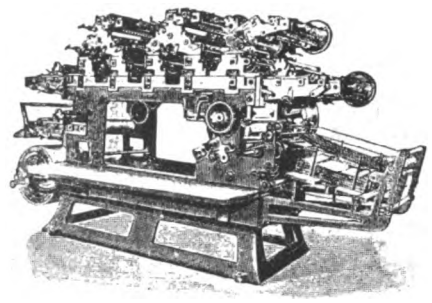
Glueing and Gumming Machine.

These machines can be supplied in various designs, fitted with Automatic Take-Off and Conveyor, for gumming the whole sheet, or for strip work made in sizes from 6 in. up to 40 in.

These Machines are also made for gumming paper in the reel.

Label Gumming and Pasting Machine.

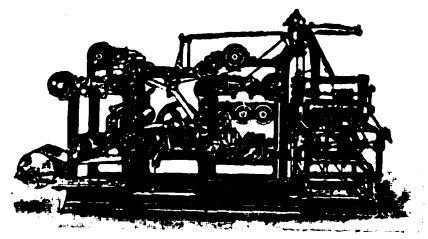
This ideal machine is recommended for gumming Labels of ANY description, and is an all-round universal indispensable machine.



Saves room, stock and money, improves the quality of labels, and always ready for change of work or jobs.

Made in sizes from 6 in. to 12 in.

Driven by Motor as illustrated.



Hartung, Kuhn & Cie.'s

SPECIALITIES.

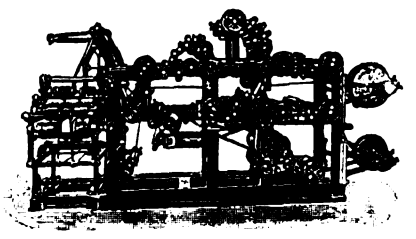
Rotary Ticket Printing Machine

With 6-colour equipment, end delivery. Compact and simple design, smooth running, easily accessible, prints both sides of web, delivers in sheets or strips, fitted with adjustable Numbering Heads and Perforators. Output, Tramway Tickets 250,000 per hour. Sheets of tickets or labels 7,000 to 9,000 per hour.

Duplicate Rotary Counter Check Book Machine.

ONE REEL.

Fitted with funnel folder, tapeless delivery. Constructed to print from 1 to 6 colours, numbers and perforates in any position and delivers folded or flat sheets. Output, 1,500 Duplicate Cash Books, numbered and perforated, of 100 leaves each, per hour. This machine can only be supplied outside Europe.



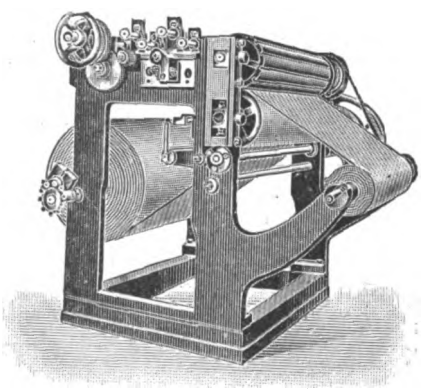


ILLUSTRATION OF

Triplicate Rotary Check Book Machine.

TWO REELS.

Printing from 1 to 6 colours, recommended for Cash Books, Restaurant Books and Drapers' Check Books. Delivering 1,500 triplicate books, printed, numbered and perforated, in any position of 100 leaves each per hour. These outputs can be increased, but it depends entirely upon the cylinder circumference. This machine can only be supplied to users outside Europe.

Rotary Printing Machine

FOR SPECIAL WORK.

Illustration of one-colour machine. Can be constructed to print up to 3 colours, fitted with a rewinder or adjustable cut-off, delivering flat sheets. Speed when re-winding 6,000 to 8,000 yards per hour. Output, when delivering flat sheets, 6,000 to 7,500 per hour.

The Glasgow Printers.

Considerable friction has existed for some months past between the Glasgow employing printers and their workmen, and matters have now reached such a crisis that, at a meeting of the employers held last week, it was decided to intimate to the men's organisations that unless a friendly conference on the question of the rules was arranged for by January 4th, 1913, or the proposed new rules were withdrawn, the employers in Glasgow would give notice in the following week to the members of the Glasgow Typographical Society employed by them that their services would be dispensed with a fortnight thereafter. The following statement, showing the attitude of the Scottish Alliance of Masters in the Printing and Kindred Trades, has been prepared:—

"It is now reported to the Alliance that a crisis has been reached at Glasgow, and that the Glasgow Typographical Society has intimated to the Glasgow Master Printers' Association its intention of proceeding to put the proposed new 1912 rules into practice forthwith.

"When the Glasgow Masters' Association met the representatives of the Glasgow Typographical Society in conference, the latter made it clear that they were not free to alter the rules chiefly objected to by the employers, because they were bound to adopt and put into practice without modification the governing rules of the Scottish Typographical Association. They added, however, that as this was a national matter, the best course would be for the Scottish Alliance to meet the Scottish Typographical Association and settle the matter on a national basis. The Scottish Alliance of Masters in the printing and kindred trades approached the Scottish Typographical Association with the view of having the proposed new rules discussed and an amicable settlement arrived at, but they have hitherto declined to meet the Alliance as representatives of the employers on this subject.

"In accordance with the suggestion of the secretary and Conference Committee of the Glasgow Typographical Society, the executive of the Glasgow Master Printers' Association put into print a reasoned statement, very carefully drawn up, embodying notes on each of the new rules, pointing out the objections to some of them, and making various suggestions. In no single case was one of these suggestions entertained, nor was any reply attempted to any of the objections raised. The only reply made to the statement was an insistence that the new rules must be adopted by the employers in Glasgow without alteration.

"At the conference between the Glasgow masters and the Glasgow employees' representatives it was distinctly stated by the latter that the proposed new rules would not apply to the whole of Scotland, and that if they had not been presented in Edinburgh they would be there presented. It is understood that the Edinburgh branches of the employees are now taking steps in this direction.

"The employers have made it clear that some of the new rules are quite unworkable, and would tend to the serious disadvantage of both employer and employed.

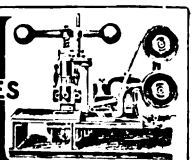
"In the course of the correspondence on the new rules between the Glasgow Masters' Association and the Glasgow Typographical Society the latter intimated to the employers their withdrawal from the agreement of October 30th, 1907, which means that they claim the right to make new rules affecting working conditions as between employers and employed without any consultation with the employers. This matter has been considered by the Masters' Association of Glasgow and Edinburgh, and these absolutely decline to recognise any new rules affecting mutual interests which have not been mutually considered.

"The employers have been desirous of meeting the executive of the Scottish Typographical Association with the view of arriving at mutually agreeable rules, and the Master Printers' Associations of Glasgow and Edinburgh are still willing that the Scottish Alliance of Masters should arrange for a conference on their behalf for the purpose of discussing and securing a settlement of the rules which may be mutually agreeable to them and to the Glasgow and Edinburgh branches of the employees, provided this can be brought about without undue delay. This appears to be the only way to prevent a definite rupture, which would obviously be to the disadvantage both of the members of the Scottish Typographical Association and the members of the Master Printers' Associations.

"Meantime, until such a mutual arrangement has been arrived at, the Master Printers' Associations of Glasgow and Edinburgh recognise only those rules hitherto existing in their establishments, and any attempt to put into force the new 1912 rules in either city will be resisted by the combined employers of both cities."

AMERICAN Imports and Exports of Paper, etc.

The imports of paper, etc., into the United States, and exports therefrom, during the periods mentioned, were of the following values:—



Imports.

October—	1911.	1912.

A WRITER in the *Daily Chronicle* says that:—"Collecting printers' proof sheets ought to be a pretty profitable hobby when the marginal notes and corrections have been made by famous authors, but yet it does not seem to be pursued to any particular extent. A contributor to 'N. and Q.,' who has Cardinal Newman, Andrew Lang, Edward FitzGerald, and other notable markers of proofs in his collection, has been struck by the deferential politeness of latter-day authors towards the professional proof-readers as compared with the contemptuous rudeness of the old-timers. This is the sort of thing that these were wont to scribble on the margin: 'What the deuce could possess you to insert the direction for marking 'Henry' in capitals?'"

Some Useful Rotary Machines.

An interesting class of rotary printing machines built for letterpress printing in one or more colours, on one or both sides of the paper, have been brought to our notice by Messrs. H. Nedden and Co., 11-12, Finsbury-square, London, E.C. They may be had in fixed size or as an all-size machine. With the fixed size machine the length of the sheet remains always the same, whilst the width of the sheet depends on the width of the reel of paper used, which may be varied. With the all-size machine, not only the width but also the length of the sheet may be varied from the maximum to about half the maximum length of the sheet. The paper comes off a reel and can either be delivered in sheets or re-reeled, or both methods of delivery may be combined in both the fixed size and the all-size machine. The printing is done from curved plates, and the ink distribution is excellent. These machines are suitable for printing practically any kind of paper, from tissue paper to thin cardboard, as used for folding boxes. The output of the machines is from about 4,500 to 8,000 sheets per hour, and depends on the kind of paper used, the quality of printing required, and also the method of delivery and size of the sheets. Very little power is required for driving the machines, and a hand drive is provided which can be used when making ready and starting to work, a great convenience to the machine-minder and an important contribution towards the economical working of the machines. These machines can be built to meet special requirements, and we recommend those of our readers who are interested to communicate with the above-named firm, who will supply them with all further particulars they may require.

The same firm also handle a useful rotary ticket printing machine for tram tickets and admission tickets. In this the tickets can be delivered in blocks, numbered 1 to 100 or 1 to 1,000, or in reels, numbered consecutively. A series number or initial may also be attached, which changes with every block or reel. When the tickets are re-reeled the strip is perforated so that the single tickets can easily be torn off. The size of the tickets may be varied in length and width, but must, in one direction, always be a division of the circumference of the cylinders. The size of the cylinders is therefore made according to the size of the tickets and in accordance with the required output of the machine. The speed of this machine is enormous, and even on a small machine 75,000 tickets per hour can be produced. Further particulars of this, as of the other machines, will be given on application to Messrs. Nedden and Co. at the above address.

THE "Year Book of Photography and Reproduction Methods" for 1912 contains an interesting summary of the past year's work, and has articles on the newer methods and inventions in the arts it deals with, as well as a full list of the year's German patents in connection therewith. The book is a thick one of over 800 pages, and contains a number of specimens in half-tone and colour reproduced by various methods. The publisher is Mr. Wilhelm Knapp, Verlagsbuchhandlung, Halle a/S. The text is of course in German, and the price is eight marks (8s.).

The Haddon-Caxton Typefoundry.

The progressive policy of this up-to-date typefoundry in introducing new faces of type is again exemplified by the issue of a quarto booklet of eight pages showing a new series of types that has been introduced under the title of the "Healey," in sizes ranging from 8-point to 72-point. The "Healey" is of a new and attractive design, and it possesses a distinctive character that should render it an acquisition to the printer who desires to keep up to the mark in the matter of display work, as the delicate character and clearness of the face render it most suitable for the best class of jobbing display. Like all other faces made at the Haddon-Caxton Foundry it is cast on the time and labour-saving system—point line, point set on point body, which gives practically automatic justification in all sizes. The new face is an excellent one and is well worth the attention of printers.

It may be interesting to note here that sixteen years since the Caxton Typefoundry was established by Mr. Walter Haddon, and despite a trying struggle to make headway on its new principles against existing prejudices and monopolies its success has been constant and complete. In the early days of its existence many unscrupulous statements were made as to its products, but it has outlived all these, and to-day its products have a world-wide reputation and are in universal use in the printing trade. The foundry in itself is of great extent and with its kindred workshops covers several acres of ground, the workers labouring under ideal conditions, with plenty of light, space and air. Several hundreds of workmen are employed and their number is constantly increasing as the business progresses. The Haddon Platen Machines are well-known to printers, and the "Art Caxton" and "Safety Platen" are extremely popular, not only in this country, but abroad, and even in the United States where the high tariffs almost prevent the introduction of any British machinery the Haddon machines are selling freely. As instancing this we understand that the American agent recently cabled for immediate shipment of 4 Model C, 1 Model D, 2 Haddon Safeties, 1 Caxtonette, and the following day a further cable for 2 Model B. The duty payable on this order was £470; this amount the American printer has to pay in addition to the regular selling price. This is a hard fact, and conclusively proves that the progressive American printer appreciates these platen machines very highly indeed.

Printers interested in type, material or machinery should communicate with the firm either at the Caxton Foundry, Market Harborough, or the London offices, Salisbury-square, Fleet-street, E.C.

HERBERT FRY'S ROYAL GUIDE TO THE LONDON CHARITIES, now in its 49th edition, has just been published to remind us of the many urgent claims of charity, and to guide the benevolent well-to-do to those London charities which will most appeal to their interests. The editor, Mr. John Lane, tells us that during the past year the charitable institutions of London have been taxed to the utmost of their resources in combating the terrible poverty and destitution at the dock-side during the dock strike, and indirectly through the coal-miners' strike in the beginning of the year. The guide shows in alphabetical order the name, date of foundation, address, objects, annual income, chief officials, etc, of the London charities, according to their latest reports, together with an appendix of special announcements of the principal Metropolitan hospitals and charitable institutions. It is published at eighteenpence by Messrs. Chatto and Windus, 111, St. Martin's-lane, London.

AT the annual meeting of the Tract and Colportage Society of Scotland, the Rev. William Muir, Glasgow, said that he was often amazed at the kind of books he saw lying about in houses that were supposed to stand for what was healthy and wholesome; books that not merely "the young person," who was so much on the conscience and heart of their grandfathers, but "the old person" as well, ought never to be allowed to read with pleasure and never could read with profit. There were those who would bar their doors against the unclean man or the infidel, and nevertheless who allowed books that could propagate uncleanness and untruth inside the sacred circle.

THE GOOD TONE OF DENTS BLOCKS IS UNRIVALLED

The successful adaptation of the three colour process for commercial purposes is one of the greatest triumphs of modern art of printing. Everyone connected with the craft is interested with the subject, the present degree of accuracy and [illegible] attained is the result of thirty years of experiments of a highly [illegible] involving the most subtle principles concerning the nature of colour [illegible] the action of light.

It is a never-ending source of wonder to those unacquainted with the process that practically all the colours of the rainbow can be obtained from three impressions on an ordinary printing press. To the business man, used to lithography, where from five to twelve impressions were required to get really good colour effects, the three-colour process seems a kind of modern wizardry, and to the artist who has long suffered from the efforts of the lithographer in transferring his drawing to stone the new direct photographic process seems like the dawn of the millennium.

The [illegible] adaptability [illegible] its results are always striking to the eye. The public whose vision wanders over [illegible] page of black-and-white cuts [illegible] is instantly attracted and held by the emphasis of a colour reproduction and the enormously greater force and sense of reality with which it renders its subject. In this respect and [illegible] favourably [illegible] process [illegible] commercial [illegible] standard.

The concern with merchandise to sell must [illegible] attractive [illegible] attention to [illegible] that it must hold that attention [illegible] Truthful [illegible] portrayal of its wares is therefore essential. What can carry more weight than the photographic reproduction on the printed page of [illegible] their [illegible] manner in catalogues, the use of the process is extending with marvellous rapidity.

The untold good that is being done by the process in bringing faithful copies of beautiful paintings within the reach of even the smallest purse and humblest home [illegible] as a whole to a higher plane of artistic [illegible]

"BOOKS THAT COUNT": A DICTIONARY OF STANDARD BOOKS. Edited by W. Forbes Gray. Pp. xx + 158 + lviii. Cr. 8vo. A. and C. Black, 1912. 5s. net.

At the present day the plethora of books on the principal departments of knowledge is such that general readers and young students are confronted with the great difficulty of obtaining the titles and prices of reliable books on any particular subject, and some information regarding their scope. For advanced students, specialists, and librarians there are numerous special bibliographies and such general guides to the best literature as Nelson's "Standard Books," and Sonnenschein's "Best Books" (to which the compiler of the work under notice is indebted) but hitherto there has been no reference work on comprehensive lines in similar form, although one does not forget such useful guides to study as J. M. Robertson's "Courses of Study," and "A Student's Library," edited by H. Bisseker.

"Books that Count" has been compiled with the view of meeting this need. Its scope is indicated in the Preface: "'Books that Count' takes note only of books (1) that are in English (together with outstanding foreign books, of which good translations exist); (2) that present concisely, clearly, and authoritatively the general aspects of the subject with which they deal; and (3) that are thoroughly modern in aim and outlook, easily accessible, and purchasable at a moderate price."

Its survey includes about 5,500 books, and each entry gives the following particulars: author, title, size, number of pages, date of publication, publisher's name and price, followed by a concise note, expository rather than critical, which describes the scope of the work and its distinctive features. The entries are classified under the following 14 main headings, each of which is subdivided: Biography, Education, Fine Arts, Geography and Travel, History, Literature, Medicine, Music, Philology, Philosophy, Religion, Science, Sociology, Sports and Pastimes. The book being comprehensive in scope, we naturally looked for a list of books dealing with the industries connected with bookmaking, with which we are directly concerned, and to our amazement we found that not only does the book not contain such a list, but it does not contain a section on Technology! Surely students of technical subjects require as much guidance as other students. If it is necessary to give a list of works on science, it is equally important to give a list of books on applied science, or technology. It is true that there is Greenwood's "Classified Guide to Technical and Commercial Books," but during the eight years that have elapsed since it was published a great number of the books have become out of date or have been superseded, and consequently the book has ceased to be a modern *guide*. It is only fair to state, however, that a few books which really come under the category of Technology have been included in the work in somewhat unexpected places. For example, in this work "Motors and Motoring" is a sub-division of "Sports and Pastimes," and it includes H. J. Spooner's book on "Motors and Motoring," which is purely a technical treatise.

After a careful examination of the books which are listed under the many and varied subjects which have been selected (agriculture, business methods, bookkeeping and shorthand, and fiction have also been excluded) we are convinced that the compiler has achieved his object of giving a judicious selection of books at a moderate price which are of, or which approximate to, standard value. The difficulties one encounters in the preparation of a work of this kind are enormous, and as no two compilers would prepare an identical list it is not our intention to enumerate important books which might have been included; and it is in no spirit of carping criticism that we make a few comments. All schemes of book classification are more or less arbitrary, and we will not therefore quarrel with the one adopted, but as they are not easily comprehended by young students without a subject-index we think that an alphabetical subject-index would have been of much greater value to the users of the book than the present title index, although it is so arranged that it is partly a subject-index.

It is not easy to ascertain the latest editions and dates of books, notwithstanding the reference works which are available, and one needs to use the British Museum freely, unless one applies to the publishers direct. From the preface it is obvious that the compiler worked in Edinburgh, and this probably accounts for old editions being described in some cases. For example, in the geology section Sir Charles Lyell's "Elements of Geology," edited by J. W. Judd, 1896, is recommended instead of a revised and enlarged edition by the same author, entitled "The Student's Lyell," published in 1911. In the section on "Drawing, Decoration, etc.," Lewis F. Day's "The Application of Ornament," 1888, which is out of print, is included, instead of his "Ornament and its Application," 1904, which covers the ground of the earlier book and also includes other matter. Further, this work is a sequel to the author's "Pattern Design, which should either have been included or referred to in a note. A similar remark applies to two other books in this section: Walter Crane's "Bases of Design" should have been followed by its companion volume, "Line and Form," and G. W. Rhead's "Modern Practical Design," should have have been preceded by his "Principles of Design."

The compiler evidently spared no pains to make his work authoritative, for he consulted nearly two hundred bibliographies by specialists, and received help from numerous experts. He has produced a work which redounds to his credit, and which will be of invaluable assistance to all who consult it. We hope that a second edition will soon be required, and that advantage will then be taken of the opportunity of adding a section devoted to technology. A few years ago the Library Association published an annual "Class List of Best Books," which had to be discontinued because the work involved was too great to be undertaken voluntarily. Would it not be possible for the compiler and publisher of "Books that Count" to collaborate with the Library Association in the production of annual supplements?

G. A. S.

EPITOME OF NEW PATENTS.

Copyright Compilation for the BRITISH AND COLONIAL PRINTER AND STATIONER. Further information concerning the following Patents may be obtained by Subscribers upon application to the Editor. Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be Endorsed "PATENT DEPARTMENT," Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London. Telegrams:—"STONHILL, London."

The Editor does not necessarily endorse the statements contained in the following abstract of specifications, which are condensed from official documents. He holds himself responsible only for the omissions and explanation which is considered desirable in regard to certain of the Patents.

11,529 (1910).—**Improvements in and relating to the Preparation of Photo-Mechanical Printing Surfaces and Printing.**—CHARLES W. SAALBURG (America). Accepted May 9th, 1911.

Relates to the production of an intaglio printing surface which shall include half-tone and whole tone subjects, with a background of the whole tone subject clear or free from screen effects. The intaglio printing surface is produced by the use of a combination wet and dry plate, positive and discriminate etching.

4,818 (1910).—**Improvements In Type Composing and Casting Machines.**—FRITZ CARL LUCKE D'AIX (America). Accepted February 27th, 1911.

A type composing and casting machine for rapidly and economically producing all kinds of characters or letters (single type), rules or borders (single type or lines), individual decorative work, special signs or faces, words, sentences or whole lines. The machine casts different type faces from a single point to 36-point, and also casts lines of different thicknesses and lengths without necessitating the changing or substitution of any part or parts of the machine. It quickly and automatically adjusts the different thicknesses or lengths of line, from a single type to eight-inch line. The primary feature of the invention is a rotary matrix holder operated by hand, and so constructed that it may remain in a given position as long as desired, whilst the other parts of the machine continue to be operated automatically, thereby enabling the operator to duplicate as often as he wishes the same type character or line of type from the same matrix or composed line of matrices respectively. The novel form of matrix holder also permits the operator, while the machine is casting the type or type line, to set in the holder another matrix or line of matrices and manually shift the same in an instant to the casting position.

12,048 (1910).—**Improvements in Sheet Delivery Apparatus for Printing Machines.**—GEORGE MANN AND CO. and ARTHUR B. EVANS (England). Accepted March 9th, 1911.

To economise space is the chief advantage sought in this invention. The sheet is stripped in the usual manner from the printing cylinder on to the bands, tapes or the like which, as to the end nearest the cylinder, are fastened to a spring roller or the like, or are weighted and pass over pulleys, or are otherwise arranged so that tension is continuously exerted on them at this end, whilst at the end furthest from the cylinder they are attached to a reciprocating part such as a bar travelling over the delivery board. The sheets are deposited on the delivery boards as the bar is withdrawn, and the bands or the like are kept taut throughout their motion by the tension applied at the ends near the cylinder. The whole mechanism takes very little more room than once the length of the sheet, with a consequent saving in ground space for the machine to which it is attached.

18,816 (1910).—**Improvements in Delivery Apparatus for Printing Machines.**—DAVID WILSON (South Africa). Accepted May 18th, 1911.

Relates to a long travel delivery attachment devised with the object of overcoming the difficulties usually experienced by printers when working on "art," or other highly finished paper, matter likely to carry a heavy body of ink, and which in the ordinary course would necessitate interleaving with clean sheets. With the aid of this attachment to an ordinary printing machine, it is claimed that interleaving becomes unnecessary, whilst there is an entire absence of "set off." The attachment, the framework of which may be constructed of wood, iron, steel or other suitable material, consists of a series of spindles (either wood or metal), with runners on which are run tapes, cords, rubber bands, cloth sheet or calico blanket, or other suitable materials capable of carrying the sheets of paper being operated upon. It is so arranged that the sheet is delivered straight from the printing press on to the travelling tapes or sheets, and is thereby sent on a travel of, say, thirty-six feet, exposing the sheet to the atmosphere, and the printed surface of each sheet is kept face up all the time.

26,901 (1910).—**Improvements in Printers' Galleys for use with the Mono or other Typecasting Machines.**—ALFRED STOCKALL and ALFRED H. STOCKALL (England). Accepted May 11th, 1911.

The printers' galley, according to this invention, is provided with means to allow the type, as it is cast, to be passed in at either end of the galley, so that with such machines as cast the type commencing at the end of the matter required and working to the beginning, the type may be passed in through that end of the galley which is necessary to arrange the type in the correct order for being dealt with in the usual manner, and preventing the necessity of transferring it to another galley.

27,629 (1910).—**Improvements in and Relating to Folding and Delivery Apparatus for Printing and like Machines.**—R. HOE AND CO. (America). Accepted May 4th, 1911.

For high speed rotary web printing machines the advantages incident to a straight line or direct run of the webs have not been obtained where transverse folding mechanisms were employed. So this invention has for its object to produce transverse folds in a plurality of webs which are being run side by side, the folding device for each web being so located that the webs may be run direct, that is, in a straight line, without sidewise deflection, through the printing machine and into the folder.

A PROPOSAL has been made in New York City to erect a modern lofty building containing every known improvement in construction for the exclusive accommodation of the printing and book manufacturing trades and allied industries, in close proximity to the Pennsylvania railroad terminal, freight piers, car lines and subway extension. The building will afford approximately 50,000 square feet per floor, and the number of floors will depend on space arranged for in advance. The proposed location will permit of very reasonable rentals consistent with amount of floor space occupied. It is desired that the building be occupied by representative concerns in the printing, binding and allied trades. Publishers, printers, photo-engravers, electrotypers, paper dealers, paper and wood box-makers, tppe founders, supply houses to the trade and all manufacturers producing or selling trade products will find unusual facilities for the promotion of their sales and the general upbuilding of their organisations in the combination of all products under one roof. The J. F. Tapley Co., book manufacturers, at 537, West Thirty-seventh street, believing that a building tenated by one standard house representing each of the allied trades would be a very desirable thing, has been sending out a circular to the allied trades in New York, with the idea of obtaining figures as to the number of houses that would be interested in one building.

FLAT BED PRESSES

Manufactured by the Miehle Printing Press and Mfg. Co., of Chicago,

Who are the largest Manufacturers of Two-Revolution Presses in the World.

SINGLE COLOUR PRESSES.

No. of Press.	Size of Bed.	Type matter covered by four form rollers.	Guaranteed Practical Speed per hour.
0000000	51 × 74	45½ × 70	1600
000000	51 × 68	45½ × 64	1650
00000 Special	46 × 68	41 × 64	1700
00000	46 × 65	41 × 61	1700
0000	46 × 62	41 × 58	1700
00	43 × 56	38 × 52	1800
1	39 × 53	34½ × 49	1900
2	35 × 50	30½ × 46	2000
3	33 × 46	28 × 42	2100
4	29 × 41	24 × 37	2200

TWO-COLOUR PRESSES.

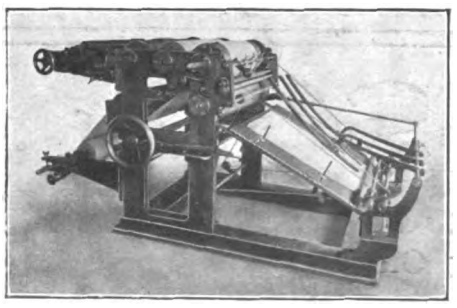
No. of Press.	Size of Bed.	Type matter covered by four form rollers.	Guaranteed Practical Speed per hour.
00000	52 × 65	46 × 60	1500
000	45 × 62	40 × 58	1600
0	42⅞ × 56	36½ × 51	1700

After Practical Experience of one of these Machines Messrs. Tillotson and Son, of Bolton, have recently had a Second Two-Colour Press installed in their Works.

PERFECTING PRESSES.

MADE IN THREE SIZES—QUAD DEMY, QUAD ROYAL, and EIGHT CROWN.

No. of Press.	Type matter covered by four form rollers.	Guaranteed Practical Speed per hour.	Horse Power.
00000	42½ × 64	1600	12
00	38 × 52	1800	9
1	35 × 49	1900	8



In the case of each machine, the width between bearers is sufficient to allow for two lays on of the full-size half-sheet.

Preparing Paper for Printing.

An invention that relates to means for locally glazing the surface of paper where it is to receive the impression of illustration blocks, patented by Mr. L. Hirsch, consists in applying powdered chalk, etc., on to an adhesive previously applied by blocks similar in outline to the illustration blocks, and finally calendering by heated metal rollers. The apparatus, as applied to a rotary machine, comprises a roller 10 of the same diameter as the printing cylinders and provided with copies 11 of the illustration blocks, which may be gelatine photo-reliefs, electrotypes, casts in india rubber, or a flat sheet with a coating of adhesive corresponding to the blocks. The roller 10 is supplied with adhesive material consisting, for example, of baryta, glue and water, or of clay, rice, starch and water from a duct 12 by rollers 13, 14, 15, 16. The duct 12 may be divided to contain different adhesives, in which case the roller 13 is made of sections of different material. After having

received an impression from the blocks 11, the web passes around the impression cylinder 17 in front of a revolving powdering or spraying device 22 also of the same diameter as the printing cylinder. The cylinder 22 is perforated and is mounted on an interior chamber 23 supplied at one end with powdered chalk, china clay, etc., from a hopper 24. The powder, etc., is kept in agitation by air blasts from a perforated spiral pipe 25. The jets of air for conveying the powder on to the paper, issue from pipes 21 inset into a pipe 26 which can be adjusted relatively to the powder nozzles 20 by screws 27. The perforated chamber 22 is covered with a sheet of paper having parts removed corresponding to the design. The nozzles that are not required for the particular design may be plugged. The powder, etc., that is arrested in the chamber 22 is withdrawn by a fan. The web thence passes to two calendering rollers 30, consisting of separate discs 31, adjustably mounted on the shaft 34, and provided with dovetail recesses 32 for receiving steel blocks 33. The shaft 34 is made hollow for steam heating, and is furnished at intervals with orifices 37 which communicate with the hollow spokes 38 of each of the discs 31. The steam may be cut off from separate spokes by cocks 39. Discs 36 at the end prevent the dovetail blocks from withdrawing, and collars 35 determine the spacing of the discs on the shaft. After having been calendered, the web passes to the printing sets 2, 6, the latter of which is furnished with mechanism 40 for wiping the impression surface. The coated side of the web with the illustrations is dried by an electrically driven fan 41.

The Preservation of Paper.*

By JOHN NORRIS.

Much has been said recently by librarians about the inferiority of the news print paper which goes into bound files of the libraries for the purposes of reference and historical preservation. An examination of the places of storage in the libraries and of the conditions of storage convinces me that while the ordinary news print paper may not be in any respect suitable for purposes of preservation, the methods of handling those papers when bound are conducive to deterioration. This criticism applies not only to libraries but to newspaper offices, and substantially to all places where newspaper files are stored. In many of the libraries the files are subjected to treatment which deprives the paper of its required moisture. The libraries dry out the newspapers by keeping them in rooms with an average temperature of 70 degrees, which is bound in the course of time to cause deterioration. The artificial heat renders the paper extremely brittle, and makes it crumble like isinglass when handled. Excessive dampness is also disadvantageous.

How Improvement may be Obtained.

Improvement in the preservation of these historical records may be obtained:—

1st: By using a printing paper that will endure indefinitely.

2nd: By binding with materials that do not attract minute organisms.

3rd: By storing under conditions (a) that do not deprive the paper of all its moisture; (b) or subject it to excessive dampness; (c) or subject it to chemical action produced by sunshine or gas or artificial heat or similar agencies or deterioration; (d) or propagate insects or other growth.

In gathering information that relates to the preservation of the printed paper, I have, at the request of newspaper publishers, inquired about the storage and preservation of news print rolls which I will also touch upon in this compilation.

The matter of paper preservation has attracted atention for centuries. Pliny says the ancients preserved their paper and books from moths by washing them with cedar or citron oil. In 1773 the Royal Society of Sciences, at Gottingen, offered a premium for the answers to questions relating to insects found in records and books. The answers accepted at that time indicated that five insects were destructive, and that six appeared to be doubtful. They recommended that bookbinders use glue mixed with alum in place of paste. The ravages of insects vary according to latitude. The cigarette beetle has been described as the most destructive raider upon books. A publication entitled "Bookworms of Fact and Fancy," gives a list of insects and includes:—

The bed bug, found in wood papers;
White ants, found in clay fillers;
Roaches, after oils and fats in parchments;
Beetles, in skin bindings;
Spring tails and Silver Fish in dry and warm locations;
Centipedes and scorpions, which prey upon the insects found in libraries.

These live promoters of paper deterioration may work considerable damage in warm latitudes, but in the important libraries which are located in the more northerly latitudes, I believe their damage is negligible.

Composition of News Print Paper.

News print paper is made by the mixture of approximately 75 per cent. of mechanical wood pulp and 25 per cent. of sulphite wood pulp with a slight addition of clay and rosin. The agencies leading to decay, according to my limited observation and study, are:

Artificial heat.
Gas combustion.
Sunshine.
Oxidation.
Excess of mineral substances.
Excessive dampness.
Carelessness in bleaching and inferior materials in binding.

Mechanical pulp will deteriorate rapidly when exposed to air or light. R. W. Sindall, an English authority, says many of the books printed on wood pulp paper between 1870 and 1880 are in a hopeless condition. With lower grade papers containing mechanical pulp the degradation of colour and fibre is inevitable. Clayton Beadle points out that paper which is brittle, when very dry, becomes stronger and more pliant with a certain amount of moisture. With more moisture it loses its power of "felting." There is a point where the maximum strength is obtained. Professor Herzberg, of the German Testing Institute, is credited with the statement that paper containing 3 to 5 per cent. of moisture is at its strongest. News print paper will absorb close to 10 per cent. of its weight in moisture. Most of this paper when manufactured contains about 5 per cent. of moisture or 100 pounds per ton of paper. It is liable to absorb 80 pounds additional of water per ton of paper in transit from mill to newspaper office. The additional weight of the paper when delivered has puzzled many newspaper publishers who almost invariably found that their rolls weighed more than the weight indicated at mill. A recent litigation in England disclosed the fact that jobbers had bought a less weight of paper than the customer had demanded, the jobbers relying upon the absorption of moisture in transit to make up the deficiency.

English librarians report that the ordinary novel printed on light, spongy paper has a life about 40 issues. In other words, it will be unfit for further use and not even worth rebinding after circulation among 40 readers.

The American Chemical Society appointed a committee in 1908 to find a paper more suitable for the records of the Society. It sought to ascertain the most durable, strongest, lightest, thinnest, most opaque, and cleanest paper having a surface not injurious to the eyesight that it was possible to procure for the money available. The specifications adopted by that Society were:—

Rag, 75 per cent.
Bleached chemical wood or equivalent thereto, 25 per cent.
Ash (china clay), 5 per cent.
Weight (26 by 38,500)—42 pounds.

*Paper submitted to a committee of the American Library Association, by John Norris, Chairman of the Committee on Paper of the American Newspaper Association.

Digitized by Google

Strength (Mullen) 15 pounds.
Folding number (Schopper) if practicable, 10 pounds.
Sizing, three-quarter rosin—no starch.
Finish, uniform machine, same both sides.
Colour, uniform, natural, paper must be well washed to remove soluble salts and bleaching materials.

The paper cost approximately 6½ cents per pound.

Complaints of Librarians.

At a conference of librarians in 1909 at Bretton Woods, N. H., Frank P. Hill, librarian of the Brooklyn Public Library, read a paper on "The Deterioration of Newspaper Paper," wherein he narrated the results of an examination of the bound copies of Manhattan and Brooklyn newspapers filed in Brooklyn Library. He said: "In many instances papers published within the last forty years had begun to discolour and crumble to such an extent that it would hardly pay to bind those which had been folded for any length of time. Further investigation showed that practically all of these newspapers were printed on cheap wood pulp paper, which carries with it the seeds of early decay, and that the life of a periodical printed on this inferior stock is not likely to be more than 50 years." The librarian sent out circulars to publishers asking whether a better grade of paper was being used for running off extra copies for their own files and what, if any, means had been taken to preserve the files in their offices. The answers showed that no special paper was used and that no means were taken to preserve those in the worst condition. Inquiries were sent to paper manufacturers with no more satisfactory results. Mr. Hill had not then found any newspaper that printed extra copies on a better grade of paper, but subsequent inquiry has disclosed that the *Red Wing Republican*, of Red Wing, Minnesota, prints fifteen copies daily from which number it supplies paper to the Minnesota Historical Society and the Congressional Library, at Washington. It binds some for its own use and places them in vaults for reference. Its secretary and manager, Mr. Jens K. Grondahl, says a fair grade of book paper is used. The paper has not obtained any scientific test. Mr. Hill's paper described the use of a liquid mixture in the German Governmental Paper Testing Institute of Berlin, by the use of which it was aimed to indefinitely preserve wood pulp papers and make them fit to read for centuries to come. The method was to dip the sheets one by one into a "cellit" solution and then hang them up to dry, or to spread them on large meshed nets. Mr. Hill suggested that it might be to the interest of publishers and librarians if a few copies of each issue of the newspapers should be printed on paper which had been treated with this chemical in the roll.

At a recent meeting of the committee of the American Library Association, Mr. Cedric Chivers, a bookbinder of Brooklyn, spoke of the successful experiments he had made with the German product "Cellit," by painting the edges of bound volumes with it. He was of the opinion that paper so treated would last 50 or 75 years and that the treatment could be repeated with the same result. The expense of treating the volume page by page might deter most librarians and publishers from attempting that method of preservation. He pointed out the necessity for binding the newspapers as quickly as possible so that they might not long be exposed to the air.

United States Government Specification.

In 1904, Secretary Wilson of the Department of Agriculture, authorised the Bureau of Chemistry to investigate the subject of suitable papers for Government purposes. The investigation covered about 5,000 samples of paper and resulted in the issue of two circulars by the Bureau of Chemistry. Subsequently the Joint Committee of Congress on Printing appointed a Commission to pass upon this matter. Its report was adopted December 18th, 1911, and now controls all Government supplies of paper and printing and binding materials. In the following month, a public bidding was held. The standard specification for printing paper that would "endure indefinitely" was as follows:

Weight, 25 by 40, 500; 50 pound basis (24 by 38-45).
Thickness shall not exceed ·0035 inch.
Strength shall not be less than 18 points.
Stock shall not be less than 75 per cent. rag; the remainder may be bleached chemical wood, free from unbleached or ground wood pulp.
Ash shall not exceed 5 per cent.
Size—The total rosin shall not exceed 2 per cent.

This quality of paper is comparatively cheap, costing 4½ cents per pound or twice as much as the International Paper Co. quoted as its newsprint price for the year 1912. The list of bidders and of the mills at which the paper would be made was:—

	Cents per pound.
American Writing Paper Co. ...	
Lots 22 b and 23 b	4.35
Lots 24 b and 25 b	4.55
C. H. Clinton Paper Co., of Phila., supplied by Nashua River Paper Corporation	4.5
Lewis Hoffenmaier, supplied from Bryant Paper Co....	5.1
C. W. Rantoul Co., of New York, supplied from Tidewater Paper Mills	4.99
King Paper Co., of Kalamazoo ...	5.5
R. P. Andrews Paper Co., supplied by West Virginia Pulp and Paper Co.	7.0
Bryant Paper Co.	5 1
Champion Coated Paper Co. ...	4.75

The award was made to the American Writing Paper Co., for 280 tons at 4.35 cents per pound and to C. H. Clinton Paper Co. of Philadelphia, at 4½ cents per pound for 76 tons. The Government Commission, in recommending the quality of paper said:

Government Commission Report on Special Paper.

"The use of this paper should be limited to copies of those permanent publications intended for Government libraries or Government use, or, at most, be limited to the copies placed in the depository and university libraries of the country. This is intended as the permanent printing paper for the service, and while its use will not be extensive, it will serve a very important purpose. The important historical documents of the Government and its original scientific contributions should be printed on permanent paper. It is also desirable that such publications as the Statutes at Large should be printed upon this grade of paper."

Mr. Veitch, of the Bureau of Chemistry, who was a member of a Government Commission on Paper Specifications, and who has given much research to these matters, says there is need for two sets of papers, one for ordinary handling and immediate accessibility, and one for storing away for future reference. It should be practically inaccessible. He writes: "No paper which is subject to a great amount of handling and use can prove absolutely permanent. Even the best paper, if handled, will deteriorate and go to pieces and if handled constantly would last but a few years. If handled very little, it would last for several hundred years, and if the volumes were opened but several times a year and were stored in a suitable place, they would undoubtedly last for many hundreds of years. In other words, the problem is one largely of use and storage.

"The sheets should never be folded. They should be kept in binders and not folded repeatedly backward and forward upon themselves."

The Bureau of Chemistry and the Bureau of Standards at Washington concur in the matter of ink. They say:

"Very little difficulty would be experienced with the ordinary printer's ink. The black inks consist essentially of carbon, which is very permanent, and therefore very little anxiety need be felt for any publication printed with black ink."

How the Congressional Library Cares for Old Newspaper Files.

In the Congressional Library at Washington, special efforts are made to preserve eighteenth century files. The volumes are sealed in dust proof cases. They are bound with buckram and finished with materials recommended by the best authorities. The books lie flat with air spacing every six inches for ventilation. Channel iron ribs are used in the stacks. Air that has been washed or screened to remove dust is forced through the stacks and then exhausted. The temperature is kept uniform the year round. Flour paste boiled with alum is used for binding. Protecting sheets of paper are inserted between every double page. A thin tough linen ledger paper is used for guards. The only possible criticism that might be offered toward the perfection of these provisions for preservation is the occasional sunshine in the storage room. The volumes thus protected cost $10.00 each for binding. The ordinary binding of the current newspaper volumes in the Congressional Library costs $2.00 per volume. The deleterious effects of the products of gas combustion are avoided in the Congressional Library because electricity is used for illumination when artificial lighting is necessary. No records are kept of the humidity of the atmosphere. The cleanliness of the entire establishment is its insurance against animal organisms.

In the New York Public Library, the newspaper files are stored upright, in well ventilated stacks with some protection against dust by the screening of the air. The thermostat in the public file room was fixed in August at 68 degrees. The files in the North room and in stacks rest on steel ribbed shelving. No attempt is made to regulate the humidity of the storage place. Gas is not used in the building.

Four large steam pipes pass through the room of the Montague Branch of the Brooklyn Public Library, containing the old New York *Herald* files. There is no sunshine there, but the main hall where most of the newspaper files are kept is flooded with sunshine. Some of the files lie flat and some are upright. The ordinary effort is made to preserve uniform temperature by heating in cool weather, but there is no special regulation of temperature, or humidity, or ventilation, or exclusion of dust.

The Philadelphia Public Library stores its newspaper files flat in the cellar. It permits the access of very little sunshine. There is some ventilation and some opportunity for variations of humidity due to changes in the atmosphere. Gas throws off its deleterious products of combustion in this room. Steam heated pipes pass through the cellar. The newspapers are bound in buckram.

May I suggest to your Committee that it gather information from the various libraries and historical societies upon a blank corresponding substantially to the following:

Data Relating to Storage of Newspaper Files in Public Libraries.

No Profit in Printing Newspapers on Special Paper.

Conceding the failure of the newspapers up to this time to do that which is more or less of an obligation upon them, it should be borne in mind that until recently very little data has been available for ascertaining a standard quality of printing paper that would endure indefinitely under proper storage. From time to time, the subject has been taken up by newspapers. Several canvasses have been made of the possible revenue to be obtained from such an issue. Apparently the expenses would far exceed the probable revenue. The purchases would be restricted to the larger public libraries, some college libraries, and some historical societies. I doubt if subscriptions could be obtained for one hundred copies of such a publication. It seems like a dream as a commercial proposition, though some newspaper genius may accomplish such a result some day. A rich institution or newspaper publisher or philanthropist like Mr. Carnegie, who has enthusiasm for the accurate historical guidance of future generations, might endow such an effort and make it possible. In any event, it lacks the attractiveness of direct profit. The mere cost of the paper would be a bagatelle. One hundred copies of an ordinary daily newspaper upon the terms and specifications of the Government's contract would hardly exceed $2.50 per diem, but the cost of preparing the plates and rolls to meet the varying conditions would carry the total cost to a figure that very few publishers would care to incur as a permanent obligation.

Storage of Newspaper Rolls.

Some newspaper publishers have asked me to gather for them information that will enable them to store news print paper rolls under such conditions that will avoid deterioration. The experience in recent years has tended to the belief that paper stored by manufacturers in warehouses near the place of consumption has become so brittle within three months that it interfered with prompt printing of the paper by reason of breaks in the web and increased waste. This brittleness is attributed to the artificial heat or absence of moisture in the warehouses.

100,000 Tons of Print Paper on Hand.

The print paper manufacturers of the United States carry nearly 100,000 tons of news print paper, of which the supply at the mill averages—

40,000 tons, or 9 days' supply for all newspapers of the country ...	40,000
6 days' supply in transit, equalling	27,000
7 days' supply in places of consumption, equalling	31,500
Total	98,500

This total of approximately 100,000 tons of paper represents a selling value of about $3,500,000. Up to date there is no evidence of any general effort either by manufacturers or by consumers to standardise the method of storage or to improve conditions. Obviously it would be to their mutual advantage to encourage and promote every such effort.

The International Paper Co. stores over 1,500 tons of paper in the loft of the big shed at Pier 39, North River, New York. The place is not heated in any way, and it is subject to all the variations of temperature and humidity which are incidental to the free play of the air on the river front. Its officers say they can store paper rolls indefinitely in that loft (as much as three years), and deliver the rolls to newspaper consumers in good condition. Their only trouble in storing paper is due to one extra handling, which is, however, less than cartage and storage in a warehouse. Some of the paper is stored in a warehouse in Franklin-street, New York, in order that the company may not have all of its eggs in one basket. The Chicago *Daily News* stores 1,000 tons of news print paper as a reserve. Eighteen months ago, during the pendency of a paper strike, it used 600 tons of paper that had been stored for five years in a cellar that was open to the free play of the atmosphere. The rolls were set upright on strips that permitted ventilation under and on every side. The windows had never been closed in all that period. It is reported that when the stored paper was put upon the presses it ran better than fresh paper.

New York City uses 750 tons of news print paper per diem. The total tonnage stored in this city is not readily ascertainable. The Great Northern Paper Co. carries between 8,500 and 9,000 tons at Pier 42, North River, to supply the needs of its customers. The International Paper Co. now has approximately 3,500 tons in storage in its loft and on cars in the city. In Kansas City the *Star* carries 2,000 tons of paper. In Brooklyn the *Eagle* carries a month's supply.

Experience of International Paper Co. in Storing Paper.

Mr. A. E. Wright, Vice-President of the International Paper Co., was asked for suggestions for storing paper in the new building of the *New York Times*. He answered as follows:—

"Our experience has taught us that paper stored in a room of fairly even temperature of from 30 to 40 degrees, with a free circulation of air at all times, is best suited for the storage of news paper.

"As you no doubt know, the warmer the air the higher percentage of moisture it carries, therefore we suggest a temperature of from 30 to 40 degrees. When necessary to get as low a temperature as this during the summer months we would suggest some sort of a refrigerating device, through which the air would pass before entering the store room. It is well to avoid as far as possible excessive temperature and moisture conditions, and allow for as free a circulation of air as possible.

"We suggest the storing of paper on a ventilated platform fully three inches from the floor; this will allow circulation across the bottom of the rolls.

"As to the effect of light upon paper, we do not think that this has much bearing as long as the wrappers are left on the rolls. We should say that the most satisfactory place for paper storage would be a basement with windows for ventilation on all four sides, and the paper stored on a platform such as recommended above.

"We feel sure from our experience in storing large quantities of paper in roll form that if our suggestions are followed out as outlined above very little, if any, change in the character of the paper will be found after it has been stored for a considerable period."

It should be stated that no one has ever attempted to adopt refrigeration as a method of preserving stored paper rolls.

Vertical or Horizontal Position for Rolls.

Another phase of this matter of storing rolls is the question of carrying rolls in a horizontal or vertical position. Practically all the paper companies and newspapers store the roll vertically because it seems to require less space. The *New York Times*, in planning its new annexe, has aimed to store over 1,000 tons of paper, and to preserve the horizontal position of the roll to avoid the waste and labour incidental to up-ending each roll and subsequent throwing of the roll to a horizontal position. In the Government printing office five men have been observed helping to change the position of a roll.

Up to this time no effort has been made to collate the data relating either to the storage of newsprint paper rolls or the preservation of the printed paper. In the common interest some definite steps should be taken to improve conditions.

Tabular and Other Work.

Tabular and figure work is perhaps the most difficult class of printing to sell at a profit, says a writer in the *Printing Art*, and to produce to the satisfaction of the customer, of the many varied jobs which come to the printer's grist. Many master printers, and often good ones, fear to quote prices on this kind of work because of the many hazards which attend its production, and it is often a difficult matter to find the most economical method of handling the work, except by experiment, which is expensive.

The safest plan in handling orders for complicated work, particularly that involving figures or much rule, is, of course, to secure the order without quoting a price; and this may often be done by presenting the matter in the right light to the buyer. I know of a large printing house which does a great deal of railroad tariff printing, but never quotes a price on a job, whether it is large or small. This house is able to protect itself against possible loss in this way, because the salesman who handles these orders has the absolute confidence of the purchasing agents of the railroads. He never abuses this confidence, and by giving good service in the way of accuracy and deliveries, has been able to hold this very desirable business for years in the face of stern competition. This is undoubtedly the best way to handle intricate printing to ensure a profit. But other printers and salesmen do not occupy the enviable position of the man referred to. They can approximate the same result in a greater or less degree, however, by showing the customer that their house can give the kind of service wanted, and if you have an absolute cost-finding system it will be good policy to explain something of its workings to the prospect, telling him that your system shows the exact cost of producing every job, and that you wish to base the price on the completed job on the absolute cost of production plus a reasonable percentage of profit, such as would be considered fair and just in any other business. If you can convince the purchaser that you know what your costs really are, and that you intend to be entirely fair in pricing the work, you can usually secure the job either without making a price or by quoting merely an approximate price.

Samples of similar work that you have done, showing type, rule work, etc., will be of the greatest help in securing contracts for complicated printing. Seeing is believing to the buyer, and a well-printed job, similar to his own, will appeal strongly to any man.

On a job that seems different from anything you have samples of, it is often advisable to set up a page showing just how the work will look, and if it is to be in book form, the sample will be more favourable if you make up a dummy of blank pages, with one or two printed pages, thus giving a fairly accurate idea of the entire job. The work of composing this sample page will also be a help to you in making an estimate, if one is required, for your machine operators or hand compositors can give you a fairly accurate idea of the time required to finish the job from their work on this one page. Good judgment dictates that all work of this character should be taken up with the heads of departments, and often with the workmen themselves, in arriving at the time that will be required for the proposed job. My experience has been, however, that an estimate of time made by a foreman or compositor is more apt to run under than over the actual time that will be made. This applies particularly to tabular and figure work where the make-up and handling after the type is set or the slugs cast will often exceed the allowance made. And the tendency of all workmen is to make a good showing of speed in an estimate, even if they cannot always do so on the time sheet.

The printer who is alert to take advantage of everything that can aid him, will remember in soliciting tabular work, that where a job is a reprint, the printed pages of the copy can sometimes be photo-engraved and the job printed from the zinc plates much cheaper than the type can be set. If the job will lend itself to this method, make your

TELEGRAMS: "LITHO, LONDON."

TELEPHONE: HOLBORN 381.

Digitized by Google

price on this basis, which will usually give you the work. When you have secured the contract, explain to the customer that you intend to produce it by photographing the old job. Be frank with him, explaining that you saw how this could be done, and that this is the reason you were able to quote so low a price. In most cases he will compliment your enterprise, and allow you to produce his job in this way without getting new bids from the printers who may have estimated to set all the type. I have seen an insurance rate book produced by this method with entirely satisfactory results, when the house that got the work would have lost it if the estimate had been made on the basis of set type.

When you have secured a tabular or figure job, impress upon the foremen that the work requires more than ordinary care and attention to prevent errors, and let the proof-readers and copyholders come in for a little admonition to avoid errors. Confer with your men as to the best, quickest, and cheapest way of composing the job. If you have more than one kind of machine, be sure that the one that can handle this particular job the best is selected. Time and money will also be saved by having as few men as possible work on the job. These few will then become so familiar with the style before it is completed, that they will make much better time than more men would do who might only work upon the job a short time. In submitting proofs to the customer, see that these are free from errors, and perfectly legible. Submit a revise proof of all pages where errors are marked, and insist that every page have a clean O. K. from your customer before printing. It is to your own interest and his to do this, and may prevent serious loss on your part.

Experience shows that it is good policy for the printer to keep any intricate job standing a little longer than usual after it has been printed, for work of this kind often has to be reprinted through errors of the purchaser or from changed conditions and the printer will not hesitate to profit by having the forms standing. The record of an appeal in a case where a commercial body sought to have certain freight rates lowered, with which I was familiar, was recently reprinted in part three times, and the printer made a handsome profit each time through having the forms standing. Even if you inform your customer that you are keeping a form standing, you can secure his good will and favour and make a charge for so doing if you do not wish to charge for the composition a second time. I do not favour informing a patron just when a form is to be distributed, however, as the profit from standing matter is properly one of the perquisites of the business and offsets to some extent the hazards of the game, which are often costly.

In handling railroad time tables, whether for employees' use or for the information of the public, the forms should always be kept standing, for the changes of time which call for a reissue are often so slight as to affect only two or three trains, and the job of issuing a new time card is practically a pick-up. Of course, the railroads understand this, but are willing to pay for keeping the tables in type.

There is also much matter that may be picked up in handling railroad freight tariffs, where time is always an important essential.

Accuracy is important in all jobs in which figures are used, and I have found that in almost every town one printing house has a reputation for accuracy, among business men, which gives that house a distinct advantage over others on work which is intricate or difficult. Careful foremen and good proof-readers are therefore an asset to every printer, aside from the actual value of their daily work, aad careful attention to details should be encouraged in every department of the plant.

The matter of equipment is also important in handling tabular work, and if you are soliciting such jobs you should be equipped with plenty of brass rule in labour-saving lengths, a plentiful supply of leads and slugs in all ordinary lengths, and your linotypes or other machines for composing should have fractional characters and other signs most used in the work you wish to handle. More time is lost in tabular work from lack of the proper material than most proprietors of plants suppose, particularly if they have not had practical experience in the composing-room themselves.

In conclusion, the handling of the class of printing referred to is much like other printing, only more so, meaning that more than ordinary care and attention must be brought to bear upon every department connected with the job than would ordinarily be required for the more common work.

WORK AT THE
French School of Papermaking.

During the academic year 1911-1912, the French School of Papermaking at Grenoble, made some interesting experiments in the chemical treatment of raw materials of a fibrous character, for the purpose of determining the method of treatment adapted to these materials, in order to extract the fibrous cellulose and the proportion of this cellulose which they contain.

These experiments were conducted with the aid of the complete paper manufacturing outfit possessed by the School of Papermaking. Digesters with a capacity of 400 and 500 pounds of dry pulp facilitated alkaline or acid treatment under pressure. Steamers, purifiers, sand traps, stuff grinders; washers, bleachers, grinding mills, purifiers; paper machine, equipped with suspended papermaking table, and capable of turning out trimmed paper 30 inches wide and composed of three pairs of presses, five driers and finishers; eight roll calender, arranged for heating, etc. Among the raw materials handled, we shall refer only to the most important, and to those furnished to the school in sufficient quantity to allow of the manufacture of paper with the cellulose obtained.

Vine shoots. Extraction of the cellulose; the yield; production of brown and bleached cellulose; manufacture of paper with the cellulose obtained.

Baobab wood. Extraction of the cellulose; the yield; study of the various methods of extraction; bleaching of the cellulose.

At the request of interested parties, the laboratory has conducted experiments in extraction with sea water.

Various samples of paper have been manufactured with baobab wood cellulose.

Egyptian rice straw. Chemical extraction of the cellulose; its yield, bleaching and transformation into paper.

Treatment of rice straw with the object of producing straw paper, known as butchers' paper.

Finally, the laboratory of the school conducted the following analyses and experiments:—

Stretching tests: determination of the composition of the pulp, qualitative and quantitative; proportion of mechanical wood pulp; proportion of wool contained in papers intended for calender rolls; determination and analyses of the loadings of paper; analyses of resinous soap; analyses of coal—ashes—volatile substances, coke, calorific value; investigation and proportion of jute fibres contained in hempen rope; analyses of starch.

THE PRINTING ART.
An Illustrated Monthly Magazine of the Art of Printing and of the Allied Arts Issued by The University Press, Cambridge, Mass., U.S.A.
THE PRINTING ART is the most beautifully printed periodical in America. It is entirely different from the other printing magazines, in that it does not go into the technical details of the crafts it represents, but gives **actual examples** which are of service to the publisher, printer, advertising man and book lover. It is full of suggestion for Typography, design, colour of ink and selection of paper stock, and will be found invaluable by those desiring to improve the quality of their work. PRICE 21/- per year. Single copy 2/-. Send this amount for sample copy to—

Messrs. R. Hoe and Co.'s Dinner.

The staff annual dinner of Messrs. R. Hoe and Co., Ltd., held the other Saturday at Anderton's Hotel, Fleet-street, was an interesting event. Between forty and fifty guests were present. The Hon. Dudley Carleton (director) occupied the chair, and was supported by Messrs. W. T. Hampshire (vice-chairman), G. F. Read (general manager), N. T. Robb (director), and the principal members of the staff.

The toasts of "The King," proposed by the chairman, and "The Company," proposed by Mr. J. G. Blunden, having been duly honoured, the latter was responded to by Mr. G. F. Read, who, in the course of his remarks, said: On other occasions a great deal has been said about the past, and we have good reason to congratulate ourselves on what has been done in bygone days; but the future has even greater possibilities. The business of building printing presses has arrived at a point where an entirely new field of operations is opened out before it. The large and speedy newspaper presses which formerly excited the wonder and admiration of the public have now ceased to be regarded as extraordinary; by us who are engaged in the making of them they are considered very ordinary matters to deal with. But developments are taking place in the printing business which make the production of the newspaper of to-day, with fine illustrations, the accomplishment of an artist as well as the work of an engineer. Photography, chemistry, and electricity are now combined with the mechanism of the printing machine. Whereas a few years ago the requirement was for presses capable of doing ordinary type printing, there is an increasing demand by newspaper publishers as well as the public for the production of fine art illustrations in the daily editions, and not only must machines now be provided that will produce a vast quantity of copies, but each copy must be an art production. As a company we are giving careful attention to these developments, and are in a position to supply the machines for this demand. I think you young men should be glad that you are engaged in a business where such possibilities are open to you.

In a few well-chosen words, the health of the chairman was proposed by Mr. E. T. Morris, as well as the united healths of Messrs. Robb, Smith, and Mills, and were received with musical honours.

Under the direction of Mr. J. Barnes, the following excellent programme was rendered during the evening by members of the staff, Mr. Hamilton acting as accompanist: Songs—Messrs. J. Barnes, E. Jones, H. Read, A. Wadeson, W. E. Field; humorous songs—Messrs. J. Smith, C. A. Bartlett, T. Davison, Hamilton; recitations—Mr. W. T. Hampshire; cornet solos—Mr. F. Blake.

A vote of thanks was accorded the committee, Messrs. H. Hayward and J. Smith, the hon. secretary, Mr. J. A. M. Jenkins, and the musical director, Mr. J. Barnes, and a very enjoyable evening concluded with the singing of "Auld Lang Syne."

THE COPYRIGHT ACT. — At the Salford Police Court, the other day, before the Stipendiary Magistrate, a man was charged with selling, on December 19th, three dozen copies of a pantomime song-book, containing certain infringing copies of songs of which Messrs. Francis, Day and Hunter, were the copyright owners, that firm being the prosecutors. After hearing evidence the Stipendiary Magistrate said he was satisfied that the defendant had broken the law knowingly. He would impose a fine of 5s. in respect of each of the three dozen copies sold, and costs. The defendant said he could not pay that amount (£9 and costs). The magistrate said he must be committed for a month.

WHEN stereotype plates are bent, says an American journal, they may be straightened without fear of breaking them by holding one end firmly against the surface of the imposing stone and lifting the opposite end, letting it "slap" back. After a little practice plates can be made as good as new by this method.

ALWAYS READY TO WORK.

Digitized by Google

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Last week I gave my New Year's best swishes to the printer who is unwise enough to work too hard; especially to the man who systematically works on Sundays as well as on weekdays.

o o o

Now to think of another type of man. Some of our New Year's swishes must go to those who won't work enough. Let there be no mistake about it, there are not going to be in the future any soft jobs in printerdom except for a few in the high places of the trade.

o o o

Printing is not exempt from the general trend. That trend is towards large fortunes for a very few, and towards only a modest competence for the great body of employers; so modest that it will not be greatly higher than the sum drawn in wages by the better paid employees.

o o o

The advantage of being an employer will tend to be rather in the comparative fixity of position than in the actual profit figures.

o o o

The course of industry in general manifests a marked trend towards concentration in few hands—towards monopoly indeed. It is less obvious in printerdom than in some crafts; still those who are at all behind the scenes note how this large printing house and that are always on the buy; or on the absorb. The names of firms taken over may not be altered, but the controlling personalities vary for all that.

o o o

One might enlarge on this. As to how our free import system for all its abundant free competition yet permits the formation of monopolies, and as to how a protective system fairly incubates them. But enough to express a conviction that the thousands of printers of the future are not going to maintain with ease and for long a habit of life very greatly more luxurious than that of their best paid workers.

o o o

I believe than sounds awful; but it is really not nearly so bad as it at first looks. How dreadful it is, depends largely upon the wisdom of the individual. It is amazing how large and varied a life some manage to live with but scant seeming income. I am not envisaging a narrower life for the average master printer. Nary a bit of it; let him determine to have more leisure or more pleasure, and he'll get it. Let him "cultivate not only the cornfields but the pleasure grounds as well."

o o o

Is the suggestion of smaller income and richer life so illogical after all? Have not many of us been missing the ends of life in over-anxiety as to the means of life.

o o o

We commonly find what we look for. A resolve, a new year's resolve, to have more points of pleasant contact with men and things, is the sort of resolve that would tend to fulfil itself.

o o o

Swishes then—best swishes for whoever would be a modern Man-with-the-muck-rake refusing to lift his eyes to see pleasures that are his for the taking. Swishes for the man living in a corner of his counting house, instead of living (to quote Morlais Jones once more) in the constant realisation of the whole sweep of his existence.

o o o

Swishes—best swishes—for the new year, for Mr. Faintheart and Mr. Doubtful, and Mr. Sure-of-the-Worst. The great need of the time is more faith.

o o o

The cynic may deride this. I have no use for the cynic. He is the meanest and shallowest of God's creatures, And the most helpless.

o o o

I say the great need is more faith. No doubt we have generally ceased to fear or admire a Monster Policeman, somewhere in the Unknown, once conceived of as the guardian, or gaoler of the Universe.

o o o

The astronomer alone has done much to kill that conception. The effort to realise thirty thousand suns each with a planetary system like our own, makes the policeman conception tend to vanish. My son comes in from his University and tells me the stars we see are simply such as they were 2,000 years ago. It has taken that time for light from them to reach us; though it travels at 186,000 miles a second. Some of the stars we see may not be there at all; they may have dissolved as Mars is likely soon to dissolve in one collision with a planet which is down on its astronomer's time table.

o o o

But how inconclusive after all are these indications. What if we are the only humans in the whole great 30,000-sun system? And what if our terms and conditions of thinking and being are due to be changed? What if space and time themselves are destined to become words with changed meaning?

o o o

What if after all we humans are greater than we have dared to suppose? And potentially happier, if we will but let our lives be as happy as they may? What if the supreme force is after all really as beneficent as we have long been saying, but perhaps have not been really believing. What if beneficence is supreme, involving in strictest logic that nothing is too good to be true; that whatever is not true must be untrue for some other reason than that.

o o o

I will venture a little later to embody the few lines I sent round as my own New Year's greeting. I turned to Franklin for a suggestion. Born the fifteenth child in a poor man's home, presumably one of the unwanted youngsters of the world, hard worked by his father, bullied by his brother, infamously tricked by the first politician he as a youth ever encountered, he might have become a splendid cynic, or a most excusable failure and futility. He was neither. As to cynicism, he said, none are so ready as knaves to believe an accusation of knavery. He was slow to condemn.

o o o

Rather he resembled a contemporary old sage who declared "I am ready now to call a man a good man, on easier terms than formerly."

o o o

Or shall I say he resembled the working chief of a very large British printery with whom I have often conversed and often in his own home. "I feel," he told me, "that I am doing some real good in the world, while I who have worked my way up to become a director am controlling a large body of men, selling their product for a fair profit, and seeing to it that the conditions of their working lives are as healthful and as pleasureable as the conditions of the trade admit." He delighted in the cricket which he saw his fellows playing just outside the works the firm had built as far from the smoke of the neighbouring city as might be.

o o o

Now my friend is not wholly unused to labour friction. He has not been ready to concede everything at the first asking. A harder fighter when sure of the rightness of his position I can hardly imagine. He actually writes me this Christmas expressing some misgiving as to the effect of some concessions asked for, but he adds, "However, I hope with my increasing age I shall not become uncompromising; and during the time I have the power to control men that I shall not lose my sense of proportion; and that the Almighty will give me power to see when I am no longer able to guide others."

o o o

As I have said I fastened for a text for my New Year's greeting on Franklin's serene reflections in his old age that the world is growing wiser, and wiser," and this poor enough verse was my season's greeting":—

No dream of youth, but his reflection sage,
Who won wise-hearted through an evil age.
The worst of men he found not wholly dross,
The worst of things he found not wholly loss.
Held life a sacred thing from sacred source,
And goodwill infinite, the final force.
Saw wisdom clearing other eyes to see
That these things are and that these things must be.
The ways and wiles of men too well he knew
Yet nothing deemed too splendid to be true.
Else, Goodness were not regnant, thro' and thro'

At New Year may we hear an old man's voice
Behind us, heartening, bidding us rejoice,
And keep the goodwill spirit ever green
On New Years' Days and all the days between.

o o o

Harking back to my printer friend's letter. He desired that he might still see things in their true proportions. Knowing him well and respecting him deeply, I think he does see things in their true proportions. Among these things is always the question of health.

o o o

What a beastly place many a printery was a few years ago. What a stinking hole. That is very largely altered, because of education, and because of Factory Acts, and because of the immensely improved morale of journeymen printers. The old snuffy "boozy" comp and machine minder is becoming extinct.

o o o

Yet, even so, the young children of our wage workers die nearly three times as fast as do the children of their employers. The tests per 10,000 reveal this inequality. It involves that their children who do not die yet suffer in health, A high death rate means a low health rate among the living.

o o o

A wage working printer may do foolish things at time and may make impossible demands; and may have all sorts of faults. But at least he has a right to give his serious thought to such an inequality as this. I think he has no right not to do so.

o o o

These and like considerations cannot but be present to the mind of any who are like the large minded and large hearted master printer, the writer of the letter just referred to, and who want to maintain their sense of the true proportion of things.

o o o

And there are many masters and men of whom that affirmation can be made. "The world is growing wiser and wiser."

FRANK COLEBROOK.

IN connection with the removal of the plant and machinery required for the production of the *Journal of Commerce* from the old premises in Victoria-street, Liverpool, to that paper's specially-constructed premises in James-street, the Victory Web Printing Machinery Co., of Liverpool, have just achieved a unique feat of engineering. The company in question are the makers of the machinery which prints the *Journal of Commerce*, and the exigencies of production necessitated the removal of one machine during the week end. The machine in question weighs 14 tons, and consists of some two to three thousand parts. Some idea of the task may be gained when regard is had to the weight of the machine and number of pieces involved in the whole, combined with the fact that it had to be dismantled, lowered from the top of a five-storeyed building, put into carts, conveyed a quarter of a mile away, and re-erected and employed in producing Monday's issue, *i.e.*, to be ready by midnight of the Sunday. The company took delivery of the machinery shortly after one o'clock a.m. last Saturday, and by eleven o'clock p.m. of the Sunday the machine was sufficiently re-erected as to permit of its printing the *Journal of Commerce*. The achievement was extremely creditable alike to the Victory Co.—whose machines are so well and favourably known throughout the whole newspaper world—and to the engineering staff of the paper.

LAST week there were seized on the premises of a Leeds printer 7,000 copies of pirated songs. At the Leeds Police-court the printer, who said he was ignorant of the copyright law, was fined a penny per copy (£29 3s. 4d. in all), and the magistrates also made an order for the confiscation of the plates.

TRADE NOTES.

A STRIKE of compositors in about twenty printing offices of Amsterdam has broken out, the men demanding a new standard of wages. Two newspapers were yesterday unable to appear. An extension of the strike to other establishments is probable.

TENDERS WANTED.—The Durham Corporation requires tenders for a supply of printing and stationery for one or three years. Particulars from Mr. F. Marshall, Town Clerk, Durham. The Hendon Urban District Council requires tenders for the execution of printing work and supply of stationery. Mr. S. Slater Grimley, Council Offices, Hendon, N.W., will supply particulars.

ON the suggestion of Councillor Gemmell, the Committee on Cleansing have removed the mud-box in front of the Ramshorn church, Glasgow, and have laid a plain granite slab marked with a cross and the initials R.F.: A.F. Till the citizens erect a more appropriate memorial this simple stone will serve to mark the resting-place of the brothers Robert and Andrew Foulis, the famous Glasgow printers.

THE Brandon (Canada) shorthand writers have formed a club for practice and discussion on matters pertaining to the guild. As Brandon has now several hundred stenographers, the club has good prospects. It is proposed early in the new year to celebrate the centennial of Sir Isaac Pitman, one of the originators of the modern shorthand system. Mr. A. M. Ross, of the Public Stenographers' Co., is president.

AT a meeting of the Newcastle-upon-Tyne and District Master Printers and Allied Trades' Association, held on Monday night, it was unanimously agreed that as from January 1st, 1913, all prices be raised owing to the increase of wages, shorter working hours, and the extra cost of material. The advance in prices is supported by the Federation of Master Printers and Allied Trades of the United Kingdom of Great Britain and Ireland, and has been pressed by the Executive upon the whole trade throughout the country.

FOR supply of stationery, etc., for three years, for the Corporation of York, the following tenders have been accepted:—Printing minutes, Yorkshire Printing Co., Ltd.; printing abstract of accounts, B. Johnson and Co., Ltd.; printing annual reports, T. Wood, York; printing registration of voters and election forms, etc. (schedule B), *Yorkshire Herald* Co., Ltd.; printing for surveyor's department (schedule C), T. Wood; lithography, Goodall and Suddick, Ltd., Leeds; stationery, Chapman and Wilson, York; books, *Yorkshire Herald* Co., Ltd.

AT the annual meeting of the Edinburgh and East of Scotland District of the Newspaper Press Fund, it was reported that there had been an increase of 171 in the membership, that the total invested funds amounted to £64,281, and that during the past year over £5 000 had been awarded in grants and pensions. The membership of the branch is 30. Mr. Robert Wilson was re-elected chairman, and the following gentlemen were appointed members of committee:—Mr. Andrew Aitken, Mr. Alexander Fernie, Mr. David M'Kail, Mr. R. J. Wyper, and Mr. James Edmond (secretary).

SCOTCH PRINTERS' DISPUTE.—A conference has been arranged between the Master Printers' Association and the Scottish Typographical Society with reference to the dispute which has arisen in consequence of the adoption by the men's organisation of new rules which will affect the working conditions in the book and jobbing shops of Glasgow and Edinburgh. The employers threatened to lock out the men if a conference was not arranged to consider the proposed regulations. At the conference, which will be held next week, representatives of the Edinburgh and Glasgow Branches of the Typographical Society will attend, in addition to the members of the Scottish Executive.

BY the death of the Duke of Abercorn, reported in last Saturday's daily papers, printers and journalists lose a kind friend and sympathiser. His Grace was always glad to see an assembly of printers or journalists at any of his residences or country seats, and he always made them welcome. For reporters he had a partial feeling. One of the craft writes that if the Duke was in a large city and he wanted to have a look round it, he invariably proceeded to the nearest newspaper and borrowed a junior reporter to act as escort to him. Somehow his Grace found reporters more interesting for such a tour, particularly if slums were to be visited. Baronscourt Castle has been the scene of many pleasant gatherings of printers and journalists.

ANNOUNCEMENT is made of the purchase of the Durham *Sun*, one of the leading daily papers at Durham, North Carolina, by Samuel J. Flickinger, who was formerly engaged in the management of the Dayton *Herald*.

MR. J. W. STEEL, the Commercial Editor and Quayside reporter of the *Newcastle Chronicle*, who has been personally identified with the Newcastle Exchange for over 30 years, has retired from those positions, although he will still contribute to the *Chronicle* occasional articles on subjects on which he is recognised as a specialist. Mr. Steel has been presented with a purse of gold in recognition of his services to the Exchange, and with a revolving book-case and other articles by his colleagues on the staff of the *Chronicle*.

MESSRS. GORDON AND GOTCH, the well-known advertising contractors and publication agents, are commemorating, with the advent of 1913, sixty years' progress and development of their business, by the issue of a neat booklet containing views of their business premises in London and the various cities of the Australian Commonwealth. Their claim that during the last decade their business has nearly quadrupled bears testimony to the esteem in which their efforts are held by a wide circle of clients. The booklet is nicely got up, and bears the title: "After sixty years."

NEWSPAPERS IN A WEATHERCOCK.—An interesting discovery was made the other day when the weathercock on the steeple at Stirling, damaged during a recent storm, was being repaired. On being examined, the weathercock was found to contain four old newspapers, viz.:—The *Glasgow Chronicle* of Tuesday, June 6th, 1816; the *Stirling Journal and Advertiser*, 1821; the *Gibraltar Chronicle and Commercial Intelligence*, Wednesday, September 18th, 1844; and the *Stirling Journal and Advertiser*, October, 1844. The newspapers have been dried and again deposited in the weathercock, along with a statement of the circumstances of their present disturbance.

A YOUNG man named Alfred Critchley, of Camp-street, Deansgate, was summoned on Friday, before the Manchester Stipendiary Magistrate, for selling infringing copies of copyright works. Mr. Hockin, who appeared for the prosecution, said the prosecutors were Messrs. Francis, Day and Hunter, music publishers, London. The actual offence with which the defendant was charged was that of selling on December 19th three dozen copies of a pantomime songbook containing certain infringing copies of songs, of which Francis, Day and Hunter were the copyright owners. After evidence, the defendant was fined £10 and costs, or two months' imprisonment.

LECTURES ON PRINTING.—A syllabus of a course of six lectures has been arranged jointly by the Governors of the St. Bride Foundation and the Council of the Institute of Printers and Kindred Trades, on "The History and Progress of the Arts of Printing and Bookmaking," to be delivered in the Large Hall of the St. Bride Foundation Institute, by Mr. R. A. Peddie, Librarian of the St. Bride Foundation Typographical Library, on Monday evenings at 7.30 p.m., as follows:—On January 13th: The invention of printing and its spread during the 15th century; the printed book, its appearance, decoration and illustration, 1454-1500; the early printing press and rate of production; spread to the smaller towns. January 20th: Printing in the 16th century; great printers; sizes of books; improvements in the printing press. January 27th: The 17th century; decline of craftsmanship; illustration in France; growth of the pamphlet; the first newspaper; the printing press further improved. February 3rd: The 18th century; the rise of the publisher; the revival of fine printing—Baskerville, Bodoni, Didot, etc.; the slow growth of the newspaper; Bewick and wood engraving; book sizes. February 10th: The 19th century; development of printing from a handicraft to an industry; degradation of type faces, 1800-1840; revival of old style printing; newspaper printing; from the hand press to the rotary machine; illustrations; the triumph of photographic process work. February 17th: To-day; period of rapid development; artistic side somewhat neglected; type faces of the 20th century; the new methods of illustration; paper; the book of the immediate future. Admission will be free by ticket, to be obtained by sending stamped addressed envelope to the Clerk to the Governors, St. Bride Foundation, Bride-lane, Fleet-street, E.C.

THE December issue of our German contemporary, the *Deutscher-buch-und Steindrucker*, is a charming issue, beautifully got up and illustrated with many examples of colour work by various processes, half-tone, photogravure, line, and other methods. The matter is of great interest to printers, and we only regret that its being printed in the German language deprives the average British printer of the pleasure and profit that is to be derived from its perusal. Herr Morgenstern is to be congratulated on the getting out of such a fine production.

THE first issue of the *Musical Standard* this year is published at a penny, which is to be the price of the magazine in future. The paper was established in 1862, and has attained to its jubilee issue.

LORD NORTHCLIFFE presided on Saturday evening last at a dinner in Dublin to Mr. R. J. Mecredy, the well-known Irish cyclist, journalist, and pioneer of road locomotion, in celebration of his silver wedding. Mr. Mecredy was the pioneer worker of the *Irish Cyclist*, and established the *Motor News*.

ON Saturday evening there was a gathering of London and district journalists and their ladies at the Salisbury Hotel on the occasion of a New Year gathering of the Central London Branch of the National Union of Journalists. Mr. James O'Donovan, chairman of the branch, presided. There was an excellent concert at which several notable artistes assisted and an enjoyable evening was spent.

AN international convention of advertising men and business men interested in the extension of trade through publicity will be held in Baltimore, Maryland, U.S.A., from June 8th to 13th next, under the auspices of the Associated Advertising Clubs of America. This will be the ninth annual convention of this body, which has affiliations in Canada and England, and desires to extend its affiliations to all countries of the world. Those desiring information with respect to representation at the convention are invited to address the chairman of Foreign Representation, Mr Herbert Sheridan, Baltimore, Maryland. U.S.A.

IN accordance with an instruction from the Glamorganshire County Council, the Small Holdings Committee, with Mr. Blandy Jenkins (chairman of the County Council) and Alderman Richard Lewis (vice-chairman of the Council), on Monday, considered a letter from the South Wales and Monmouthshire branch of the National Union of Journalists, in which complaint was made that a member of the Union had been insulted by one of the county officials, and that letters from the Union on the matter had been ignored by the committee. After discussing the matter, Mr. Smith, the offending official, stated that he fully and freely wished to repeat that he had no intention to affront the journalist offended in any way. He also regretted that he had not replied to the letters addressed to him. He would take an opportunity of communicating this statement to the National Union of Journalists.

THE third of the course of lectures arranged by the Glasgow and West of Scotland District of the Institute of Journalists was delivered on Saturday evening, the lecturer being Mr. John Duncan, of the *Sphere*, whose subject was "The Illustrated Newspaper—Past, Present, and Future." Mr. Duncan sketched the evolution of newspaper illustration from its early and humble origin in the Elizabethan ballad sheets through the various stages of its slow, uncertain growth down to its full and rapid development in the pages of the press of our day. Examples were shown on the screen of the rough woodcuts of the early "broadside" period, followed by a selection from the later and richer period after the revival of the craft by Thomas Bewick. Much interest was evinced in the subjects depicting the principal engagements of the Crimean War, also incidents from the Franco-German and later wars, given with the permission of the *Illustrated London News* and the *Graphic*.

AN automatic envelope feeder for typewriters has been introduced by the Cashman and Denison Manufacturing Co. of New York. It may be used on any standard typewriter and is instantly adjustable to any size envelope. When not in use addressing envelopes, it is merely turned back out of the way, and need never be removed from the machine. The envelopes are placed in position in the holder, and are not touched until ready to take from the typewriter. The operator moves the carriage to the right with one hand, in order to begin the new line, and removes the addressed envelope with the other. As this is done, a new envelope is automatically placed ready for the type and not an extra motion has been made. In a recent test two stenographers of equal ability were given a duplicate list of names to address. The one using the automatic feeder required only one-third the time of the other.

ODD-SIZED cuts make a lot of trouble, says the *Publishers' Guide*, especially in a country office handling foreign advertisements. Single column cuts will run from 10 to 12½ ems and double column from 24 ems to full width. In

Digitized by Google

he case of a cut that has to be handled frequently or of a series that has to be "wooded out" each time, this becomes a nuisance, but it can easily be obviated. A good way is to get all the cuts together and tack reglets on the sides to fill them out to the full column or double column width, making them even 13 or 26 picas. After they are once fixed in this manner they are good for all time, and when the schedule is completed and cuts ready to return, the reglets can be easily removed and saved for the next series.

THE death has occurred at his residence in Clontarf of Mr. J. M. Gillies, for many years manager of the *Freeman's Journal*. Mr. Gillies started life as a reporter on the *Aberdeen Journal*. Thence he went to London, and acquired considerable financial and business experience, subsequently becoming head of the commercial department of the *Freeman* London office. After he had spent two years in this capacity, he was appointed in 1878 manager of the *Freeman* in Dublin. Some years ago he resigned the position to take up a similar one on the *Daily Express*. After a short time he became identified with the work of the Department of Agriculture, and later still started a business of his own, largely in connection with developments of modern engineering.

THERE has passed away another old and well-known Newcastle printer in the person of Mr. John Moad, aged 67. Mr. Moad was a native of South Shields, but commenced as a journeyman on the *Northern Daily Express*, afterwards being engaged on the *Daily Telegraph*, both of which were Newcastle papers, long ago defunct. He then joined the staff of the *Daily Chronicle*, where he remained many years, when he transferred his services to the *Leader*, and latterly he had been a member of the *Mail* staff. He succumbed to an attack of pneumonia, after having been absent from his duties less than a fortnight. The esteem in which Mr. Moad was held was testified by the large number of colleagues, fellow-craftsmen, and friends who joined the cortege from his residence to Saltwell Cemetery, Gateshead, where he was interred, on Saturday afternoon last.

THE death took place on Sunday of Mr. Arthur Francis, editor of the *Lancashire Daily Post* and the *Preston Guardian*, in his forty-third year. Mr. Francis was twice chairman of the North and East Lancashire District of the Institute of Journalists, and was also on the committee of the Newspaper Press Fund.

THE death is announced of Mr. John Humble, who carried on business as a stationer for twenty-one years at Annfield Plain, in the county of Durham. He was one of the oldest Wesleyan local preachers in the North of England.

Practical Hints on Printing Inks.

Mr. Eugene St. John, writing in the *American Pressman*, says that:—"Cover inks, the dense, opaque, full-bodied sort, have been developed during the past decade to a high degree of excellence, made necessary by the numerous lines of art cover papers in vogue. By means of the modern cover inks work is now done with a single impression that was formerly done only with two printings.

"A cover ink for use on coloured covers must be opaque in order that the ground may not show through the impression, and this means that the varnish or vehicle must contain all the colour (pigment) that it can carry. As most of the art covers have a rough or cockle finish, cover inks must be ground in a very heavy varnish. This combination of heavy varnish and an abundance of pigment results in an ink that is dense and concentrated.

"Since cover inks dry principally by oxidation, that is, on the surface of the paper, and not by absorption, they are fast driers. Should it be necessary to hasten the drying of cover inks, one ounce of paste drier to the pound of ink should be added. Then if the work after printing is carried into a drying-room, or otherwise exposed to heat, the impression will be found dry enough in one hour to go under the cutter.

"These fast-drying inks will dry hard on the plate and rollers in a few minutes, so it is advisable to either wash up when a stop is necessary, or mix some anti-drying compound with the ink, such as lard, vaseline, or petroleum cup grease. This greasy ink should be sheeted off before continuing run, as cover inks are best run without reducer.

"Cover inks are close to perfection, but a thorough make-ready is necessary to secure a clean, well-covered impression. All heavy lines and other heavy parts of the form must have extra impression.

"Linen cloth book covers are a good test of the covering quality of an ink, and cover ink alone works clean and strong on these covers, all other inks failing to cover smooth and appearing greasy.

"It must not be understood, however, that cover inks are to be used on all cover papers—far from it. The nature and finish of the cover paper is a guide to the choice of the ink that is suited to it. On all hard, rough, cockle finish papers cover ink is best; also on any cover stock with a finish similar to that of hard bond, linen or ledger stock. For plain s. and s. c. cover, laid smooth and laid antique and the like, a good job ink answers perfectly. For all enamelled or coated paper covers half-tone ink is entirely satisfactory.

"Cover inks answer all requirements as an embossing ink. If a letterhead, for instance, on hard bond paper, to be embossed, is printed in cover ink, it will look better than if printed in job ink.

"Cover ink makes an ideal stiffener and shortener for other inks with less body and covering power. Added to other half-tone, job or bond ink, cover ink works a great improvement. For this purpose it is far superior to either paste or varnish shortener. If we add some No. 5 litho varnish to a tint that refuses to lift and work clean on rough paper like ledger we get the tint to lift, but we have weakened the colour. A better way would be to make the tint from cover ink and then we could maintain the colour and still get a sharp, clean impression.

"When a tint job on ledger or bond paper comes along the average pressman mixes mixing white, coloured job ink and japan drier, perhaps adding some oo litho varnish. The result is a tint that looks greasy and mottled on hard paper and takes a long while to dry. Instead a combination of mixing white, cover ink and paste drier would work clean and sharp and dry over night or sooner. The trouble of tints working greasy or mottled is not confined to hard papers, but is often encountered when printing on softer papers like coated stock. Whether the tint has been mixed with mixing white, laketine, gloss white, mixing magnesia or any other similar preparation, if the impression appears mottled or greasy cover ink of the proper colour will correct this. For all tint work on all sorts of paper a paste drier is preferable to a liquid one, as it causes the tint to lay smooth and allows other colours to be printed on it clearly.

"While a good blue black job or bond ink answers very well for the general run of commercial printing it will be found that cover black works better on bond, hard linen and ledger papers, genuine parchment, vellum, celluloid, tin and other hard surfaces.

"The next time you print a heavy letterhead or other form on hard bond paper substitute cover black for your customary bond black and notice the improvement.

"In running varnish tints over an impression the best varnish or gloss tints are mixed from cover ink, gloss paste and paste drier. Try this combination instead of gloss varnish, job ink and japan drier and notice the difference. Not only will the gloss be smoother, but there will be little danger of the sheets sticking together if the make-ready and supply of gloss paste from fountain are right.

"All press-rooms are not equipped with a supply of cover inks and when forms must be printed on hard, rough papers for which cover inks are required, it is necessary to improve the covering power of the bond or job inks on hand. These makeshift mixtures are not equal to cover inks, but some improvement may be made by judicious combinations. A mixture of bond black and concentrated blue job ink, with a little No. 5 or No. 6 litho varnish and a little magnesia carbonate makes a fair cover black. If this mixture does not work clean enough No. 7 or No. 8 varnish may be substituted for the No. 5 or No. 6 varnish. Only paste drier should be used when fast drying is desired. A combination of English vermilion with geranium lake and a little of the above varnish and magnesia makes a fair cover red. If permanency is desired madder lake should be substituted for geranium lake. For cover blue concentrated blue with magnesia and heavy varnish may be used. A golden or lemon yellow job ink of good body makes a fair cover yellow if shortened with magnesia and heavy varnish. Cover green may be mixed from concentrated blue and lemon yellow."

Modern Journalism.

In the new Pulitzer School of Journalism, in Yale University, the director, Mr. Talbot Williams, delivered a lecture on Journalism, in which he said:—"Journalism has become the organised social consciousness of the community as a whole. The press as a whole has become one of those organs, like the bench and bar, the medical calling and boards of health, the body of teachers from the primary school to the university, the network of religious organisation through which society both knows its needs, makes up its myriad mind and finally acts. Where the State needs these to complete its will, it adopts them as its own. Where they can act apart, as the church, the State protects but leaves them free. The problem of journalism today is how this relation with a great public need shall be maintained under the stress of material profits. Such material temptation once warped the action of bench and bar, of physician and clergyman. These callings rose above this stress in our English-speaking folk by education, by the growth of professional consciousness and penalties for unprofessional conduct. The Press, through the education of the journalist, will enter on the same evolution and serve the State, as has been true of the journalist from the beginning, with a larger sacrifice and a lesser material reward."

Special Prepaid Advertisements.

IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us by the first post on Wednesday to insure insertion the following day.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS

(3 Insertions: TWO SHILLINGS),

and Fourpence for each additional Eight Words. Minimum Charge, One Shilling.

BUSINESSES FOR SALE or WANTED, MACHINERY WANTED or FOR SALE, SALES BY AUCTION, TENDERS, PUBLIC APPOINTMENTS, MISCELLANEOUS—One Penny per Word.

ADVERTISERS, by paying an extra fee of Sixpence, can have the replies addressed to the "British and Colonial Printer and Stationer" Office under a number, and such replies will then be forwarded post free.

PAYMENTS must be made in advance, except where the Advertiser has a running account, in which case the cost can be debited thereto.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C.

Situations Vacant.

A British Cost Congress.

A UNIFORM costing system for the British printer seems to be nearing realisation. The Federation of Master Printers and Allied Trades of the United Kingdom has devoted a great deal of time to the question during the past year, and one member of the Committee appointed to deal with the matter has made a study of the system adopted in the United States, having been present at the recent Costs Congress at Chicago. A Cost Congress has been arranged to be held in London. The date is not yet fixed, but it is expected to be late in February. It will be remembered that the above Committee issued its first recommendations last October, and after most careful consideration and investigation it has prepared a system which it claims to be as scientifically accurate as possible. At the same time it has been made as simple as possible so that it may be cheap to operate, and so elastic that it will suit alike the smallest and the largest businesses. This system is to be explained at the coming Congress and the details discussed. It is to be hoped that the trade will be fully represented, and will not come away from the meeting without unanimously approving of a system for universal adoption. There is just a danger, we think, that the small printer may believe that his concern is so small that he can keep in touch with every part of his business and can readily estimate his costs without worrying about establishing a special system He is quite wrong, and will be led into all manner of fatal errors, as Mr. Robert S. Denham, one of the American pioneers of printers' costs, has pointed out. He is inclined, says Mr. Denham, to think that he has a much smaller "overhead" than the big fellow, and, consequently, must have a lower cost. While, as a matter of truth, when his small budget of expense has been divided by the number of his chargeable hours, the average hour cost is usually found to be greater. The matter appeals as seriously to him as to his bigger colleagues, and he will do well to master its principles.

* * *

The Brothers Foulis.

A FEW weeks ago the bi-centenary of the birth of Andrew Foulis, the younger of the two brothers who made Glasgow famous for fine printing and for art, was taken advantage of by a writer in the *Glasgow Herald* to call attention to the fact that the remains of that pioneer of our craft was being trodden under the feet of the public, and that, to add insult to the injury, a street mud-box had been erected over the honoured head of her famous printer and that of his brother Robert, who is supposed to lie in the same grave. Andrew Foulis was laid to rest in the older part of the Ramshorn kirkyard, at that time an open spot, but now in the heart of the busy city. But in 1825 the grandson of John Foulis sold their grave to the Magistrates of Glasgow for the widening of Ingram-street. The conditions were that no one else should be buried there, that the lair was not to be sold, gifted, or exchanged, and that no sewer or pipe for gas or water was to be laid therein. Since then the hurrying steps of countless citizens have echoed o'er the head of Andrew, none knowing or caring for the man that lay below their feet. "His grave," says the writer referred to, "is under the pavement in front of the present church, a little to the east of the top of Candleriggs. Gas or water may not pass there, but an iron box is above him, and into it are shot the dust and ashes of the street, and the dung of horses. 'Dust to dust,' says the preacher, 'ashes to ashes,' but surely not such ashes as these. Can Glasgow not find another place for her mud-box than over the honoured head of her famous printer? Is it too much to ask that Glasgow should move the mud-box to another place and commemorate the name and fame of one of her greatest sons in some more fitting way?" The appeal thus made has been successful, the mud-box has been removed, and a neat slab of stone has been let into the pavement bearing the initials of the brothers, with the dates of their interment, and now the Glasgow citizens when passing along Ingram-street on their business or pleasure will know the spot where reposes the dust of two men of their city who did their part in helping to build up its present greatness.

Photogravure Illustrations.

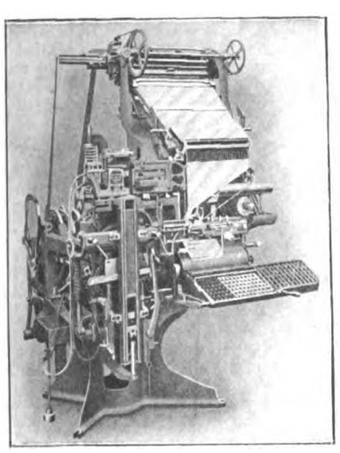
DURING the past year or so considerable developments have taken place in machines and appliances for the production of photogravure illustrations at a high rate of speed in order that they might be used in conjunction with printed matter in newspaper or magazine form. The success of the Mertens rotary method, which we have at various times noticed, has led to further developments and the *Illustrated London News* is now illustrating its pages with excellent photogravure pictures that are far and away better than anything that could be produced from half-tone blocks. This week our contemporary, *Photography and Focus*, has with great enterprise adopted the new process and appears with its full-page illustrations printed by it. The result is most successful, the artistic appearance of the pictures being much enhanced and the high-lights and shadows giving much better contrast that any half-tone renderings could do. The pictures were printed at the rate of 3,000 per hour, two-on, thus giving an actual output of 6,000 per hour, a marvellous product when the excellence of the work is taken into consideration. Our contemporary is to be congratulated on being the first photographic paper to adopt the new method.

* * *

The Father of Phonography.

SATURDAY last was the Centenary of the birth of Sir Isaac Pitman, who, in the course

Digitized by Google



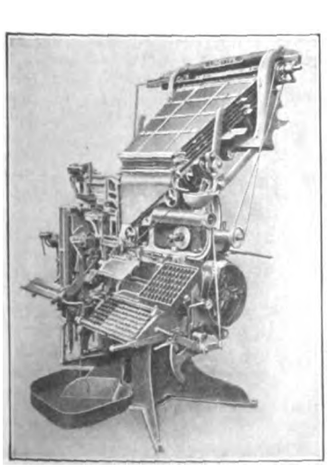
of his long life, did more to further the practice of phonography than perhaps any other man who has invented or devised a system of shorthand. There were various systems of shorthand in existence long before Isaac Pitman gave his mind to the study of the subject, but they were hard to acquire and practice, but Pitman's efforts brought accuracy and simplicity into an art that had hitherto been obscure and difficult. His publications, lectures, classes, and above all, his tremendous energy and enthusiasm made his system a success, and to-day Pitman's system of shorthand is in universal use. In Britain it is everywhere taught; it is practised in Africa, where the English language has penetrated; in India votaries of the art are found from Colombo to the Himalayas; in Australia phonography has been taught and practised as long as in the old country. Across the Atlantic we find the method held in high esteem, both in Canada and the United States, and universally employed; in South America it is in general use in Spanish adaptations, and in fact wherever business men or journalists are found there also will the system perfected by Isaac Pitman be found in practice.

* * *

Publishers Flourish.

WITH the close of the year men in the paper trade become retrospective; indeed, it is a period for reflecting and estimating, and apparently the publishers in London are doing likewise, judging by the statements that have been made within the past week on the success of their trade. It appears that the publishing trade does not always share in general prosperity, as a good deal depends on the mood the public are in for reading. The demand, however, for books, magazines and weekly papers has been most exceptional in 1912. There has been an enormous demand for cheap literature and, consequently, cheap paper, whilst on the other hand there was quite a boom in the trade of expensive books for which high grade paper is required. Many of the publishers say that the volume of business has greatly exceeded their expectations and, that being so, we may naturally assume that the paper manufacturers during the past twelve months have benefited considerably by the expansion and activity of the publishing trade.

ACCORDING to *Kemp's Mercantile Gazette* there were no failures recorded in the printing and stationery trades of England and Wales during the week ending Friday, January 3rd; the number registered in the corresponding week of 1912 was two.



THE

Linotype System

the complete and self-contained system of type composition—

BOOK, JOBBING, and NEWS.

BEYOND the saving in cost of composition with this system, there are profits accruing from the ease of make-up, low cost of standing matter, the duplication of small or large jobs to print two or more up, of greater satisfaction to customers because of the clean and sharp type face, elimination of heavy bills for body and display type, a wide range of new borders, rules, dashes, and ornaments produced at the mere cost of metal, and numerous other advantages. The Linotype of to-day is a better machine than ever; it has many improvements of special interest to users of earlier models.

Write for full particulars and educate yourself to these advantages.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Jan. 8th, 1913.

SINCE New Year's Day there has been an abundance of credit in Lombard-street, thanks to the millions recently borrowed from the Bank of England. Large sums as they fell due for repayment have been liquidated with comfort. There has been a good demand for credit, but rates remain easy. When the market has repaid all its debt to the Bank there is every probability of money becoming dear, and this has a hardening effect on discount rates, which experienced a sharp rally yesterday. Starting the week with a large export of gold to Brazil, several subsequent purchases of bar gold have turned what would have been an efflux into a net influx to date of £107,000. Stock markets began the year with a cheerful tone, but the Peace Conference soon created anxiety, and its suspension now has caused dealers to adopt a cautious waiting attitude. Consols were marked lower yesterday. Quotations are $75\frac{1}{8}$ to $75\frac{3}{8}$ for money, and $75\frac{1}{4}$ to $75\frac{3}{8}$ for the account.

The miscellaneous industrial market opened the year in an encouraging fashion, and business has continued on a very satisfactory scale, the improved tone recently in evidence being maintained. In the section relating to paper and print there have been movements both ways. Last week Raphael Tuck and Sons Ord. rose $\frac{1}{32}$ to $1\frac{3}{8}$—$1\frac{7}{16}$, but dropped it yesterday. On Monday, George Newnes rose $\frac{1}{32}$, to $\frac{33}{32}$—$\frac{35}{32}$, which they have maintained. Amalgamated Press Pref. fell $\frac{1}{32}$ to $1\frac{31}{32}$—$1\frac{31}{32}$, but the Ord. have gained $\frac{1}{16}$ to $6\frac{15}{16}$—$6\frac{19}{16}$. Associated Newspapers Pref. have given way 3d. to 20s. 6d.—21s., and Cassell and Co. have fallen $\frac{1}{4}$ to $4\frac{3}{4}$—$5\frac{1}{4}$. Business has been done during the past week in Amalgamated Press Pref. at 21s.; in Associated Newspapers Pref. at 20s. 6d. and 21s.; in *Financial News* Pref. at 15s. 3d.xd. and 15s.xd.; in Ilford Pref. at 17s. 6d.; in International Linotype at $78\frac{3}{4}$; in Lanston Monotype Corporation at 10s. 9d.xd.; in Linotype and Machinery A Deb. at 64xd. and $60\frac{1}{2}$xd., and in B Deb. at 46 and 50xd.; in Mansell, Hunt, Catty and Co., Ord. at 43s. 9d.; in George Newnes Pref. at 15s. 6d. and 15s. 9d.xd.; in C. Arthur Pearson Pref. at 7os.; in Spicer Bros. Pref. at $9\frac{15}{16}$; in Raphael Tuck and Sons Ord. at 18s. $1\frac{1}{2}$d., 19s. $4\frac{1}{2}$d., and 20s. $7\frac{1}{2}$d.; in Waterlow and Sons Pref. Ord. at $12\frac{1}{4}$ and 12, and in the Def. Ord. at $26\frac{1}{4}$xd. and b.; in Weldons Pref. at 19s. 9d. and 20s.xd.; and in Wyman and Sons Pref. at 15s. 3d.

DIVIDENDS AND REPORTS.

PRINTING MACHINERY CO., LTD.—The annual general meeting of the Printing Machinery Co., Ltd., was held last week at Winchester House, E.C. The chairman, in moving the adoption of the report and accounts, referred to the matters in dispute with Linotype and Machinery, Ltd., and gave particulars of the litigation in connection therewith. Some alterations in the articles of association were discussed, and a resolution proposed on which a poll was demanded. This will be taken at Winchester House on the 21st inst.

THE "GENTLEWOMAN."—The accounts of the *Gentlewoman*, Ltd., for the year ended July 31st last, after making allowance for depreciation and doubtful debts of £5,199, and including £641 brought forward, show an available balance of £5,840. After deducting the 5 per cent. dividend paid on the preference shares on September 29th and December 25th, 1911, March 25th and June 24th, 1912, amounting to £4,000, directors' fees £400, auditors' fees £79, and £1,000 placed to reserve (making £14,000), there remains a balance of £361. The proposal passed unanimously by the shareholders in June, 1912, for a reduction in the ordinary share capital has received the sanction of the Court.

THE BURY PAPERMAKING CO., LTD.—The directors' report for the half-year ended November 30th states there is a gross profit on the trading account of £10,086 17s. 11d. After charging that account with interest, depreciation, etc., this half-year, amounting together to £3,540 1s. 9d., there is left a credit balance of £6,546 16s. 2d., as the net result of the half-year's working. To this amount must be added the balance from last half-year, amounting to £8,286 5s. 2d., which then leaves a disposable balance of £14,833 1s. 4d. The directors recommend the payment of a dividend of 10 per cent. per annum on the 10 per cent. preference, 10 per cent. per annum on the 6 per cent. preference and 10 per cent. per annum on the ordinary shares, plus a bonus of $2\frac{1}{2}$ per cent. per annum on the 6 per cent. preference and ordinary shares, amounting together to £3,297 4s., carrying the balance of £11,535 17s. 4d. to next half-year's account. The report states that £2,257 10s., representing calls paid in advance, and £9,309 9s. 2d., representing $4\frac{1}{2}$ per cent. loans, have been repaid with interest during the half-year.

NEW COMPANY.

PAPER BAGS, LTD.—According to the filed prospectus, the capital of this company is £45,000, in 30,000 preference shares of £1 each and 60,000 deferred shares of 5s. each. 26,000 preference offered at par. Directors—E. B. Meldrum, 31, Newcastle-drive, The Park, Nottingham; J. Black, 9-15, Oxford-street, W.; H. A. Barnett, 5, Pembroke-crescent, Hove; J. W. Bainbridge, Fenchurch-street, E.C.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

NATIONAL LABOUR PRESS, LTD.—Particulars of £20,000 debentures, created by resolutions of December 30th, 1909, and November 12th, 1912, and secured by trust deeds dated February 1st, 1910, May 10th, 1911, and November 12th, 1912, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the amount of the present issue being £10,000. Property charged—the company's undertaking and property, present and future, including uncalled capital, and leasehold property. Trustees—J. Keir Hardie, M.P., Crummort, N.B., and E. Whitley, Liverpool.

COMPANY NOTICES.

ART JOURNAL, Ltd.
(In Voluntary Liquidation).

Notice is given, that a meeting of the company will be held at London, on February 10th, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

AUTO WRITER, Ltd.

At a meeting of the company, held at London, on December 31st, 1912, the following resolution was passed:—"That the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up, and that it therefore be wound up voluntarily, and that Mr. Charles Field, of the firm of Messrs. Franklin, Wild and Co., Broad-

street-avenue, E.C., be appointed liquidator for the purposes of the said winding-up." Notice is given that a meeting of the creditors of the company will be held at 22-28, Broad-street-avenue, E.C., on January 16th.

SOUTHWOOD SMITH and CO., Ltd.

At a meeting of the company, held at London, on December 16th, 1912, the following resolution was passed; and at a subsequent meeting on December 31st, was duly confirmed:—"That having regard to the agreement entered into by this company for the sale of its undertaking and property to Odhams, Ltd., the terms of which agreement were ratified by the general meeting of this company held on July 12th, 1912, it is desirable to wind up this company, and accordingly that this company be wound up voluntarily; and that Mr. Ernest Smith, of 93-94, Long-acre, W.C., be appointed the liquidator for the purpose of such winding-up."

CHRONICLE CO., Ltd.

At a meeting of the company, held at Reading, on December 28th, the following resolution was passed:—"That the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily; and that Arthur G. West, of 51, Market-place, Reading, be appointed liquidator for the purposes of such winding-up." Notice is given that a meeting of the creditors of the company will be held at Reading, on January 16th.

ELECTRICAL ADVERTISING CO., Ltd.

At a meeting of the company, held at London on December 27th, the following resolution was passed:—"That it has been proved to the satisfaction of this meeting that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily in accordance with the Companies (Consolidation) Act, 1908; and that Mr. Nathaniel C. Meredith, of 13-14, Abchurch-lane, London, E.C., be appointed liquidator for the purposes of such winding-up."

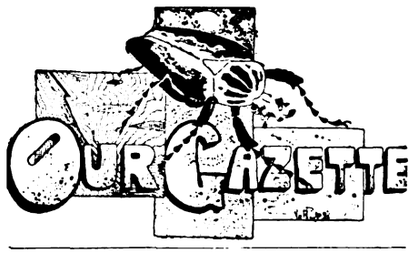
BIRMINGHAM ADVERTISING TABLET Co., Limited and Reduced.

Notice is given, that a petition presented to the County Court of Staffordshire, holden at West Bromwich, on December 13th, 1912, for confirming a resolution reducing the capital of the above named company from £10,000 to £6,334 10s., is directed to be heard before the said Court on January 14th.

REGISTER ADVERTISERS, Ltd.

At a meeting of the company, held at Liverpool, on December 17th, the following resolution was passed, viz.: "That it has been proved to the satisfaction of the company that it cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up same, and accordingly that the company be wound up voluntarily, and that Mr. Fredk. H. Thornton, of 51, North John-street, Liverpool, be appointed liquidator for the purpose of such winding-up."

RAILWAY GUIDES Co., Lim.



(Old Company.) (In Voluntary Liquidation.)

Notice is given, that a meeting of the company will be held at Westminster, S.W., on January 27th, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

JONES and EVANS, Booksellers, Ltd.

At a meeting of the company, held at London, on November 4th, the following resolution was passed; and at a subsequent meeting on November 20th was duly confirmed:—"That the company be wound up voluntarily under the provisions of the Companies (Consolidation) Act, 1908, and any statutory modification thereof, and that Mr. Arthur P. Ford, of 4b, Frederick's-place, Old Jewry, E.C., be hereby appointed liquidator for the purpose of winding up."

A well-known master printer says:—"When we installed our cost system we lost many jobs and some customers—supposedly good ones, too—but if we couldn't hold our customers doing their work at a profit to us, we were willing to look around for others, which we did, and our business is far healthier to-day than it has ever been, and yet, we are doing no greater volume of business."

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

HYMANS, L. L., and E., trading as Hymans and Co., 69, Hatton-garden, London, E.C., dealers in leather, parchment, vellum, and bookbinders' sundries. The business will in future be carried on by E. Hymans. December 31st.

DISTRIBUTION OF ASSETS.

IN THE MATTER OF A DEED OF ASSIGNMENT for the benefit of creditors, dated October 22nd, and executed by J. C. Reed, trading as John Reed, 11, Temple-chambers, Temple-avenue, London, E.C., bookseller and publisher. Claims by January 24th to H. J. Burgess, 14, St. Mary-axe, the trustee.

THE BANKRUPTCY ACTS, 1883 AND 1890.

ADJUDICATION.

HARRINGTON, F. C. A., 11, Market-street, Eastleigh, Hants, stationer. Date of order December 30th.

NOTICE OF INTENDED DIVIDEND.

RICHARDS, S. E., Hockley Mills, Goose Gate, Nottingham, printer. Trustee, E. W. Humphreys, official receiver, 4, Castle-place, Nottingham. Released October 3rd.

THE COMPANIES ACTS, 1890 AND 1908.

FIRST MEETINGS.

THE WORCESTER AND DISTRICT BILLPOSTING AND ADVERTISING CO., LTD., 19, New-street, and 9, Lowesmoor, Worcester. First meeting of creditors January 14th, noon, and of contributories, same day, 12.30 p.m., both at the Official Receiver's Offices, 11, Copenhagen-street, Worcester.

First Aid for Printers.

In sending us a little booklet descriptive of their "Tabloid" First Aid appliances, Messrs. Burroughs, Welcome and Co. point out that "in spite of the stringency of the law and the many excellent rules which are made by employers in regard to the use of printing machinery, there remain, admittedly, some risks which it is impossible to eliminate. A moment of carelessness or forgetfulness when in charge of a printing machine may result in a crushed hand. Sometimes a blow with a mallet, when locking up a form, is responsible for a damaged knuckle, or the cutting edge of the trimmer may descend upon the fingers of the worker who is adjusting the paper in the cutting machine. Boys and youths often receive cuts from the sharp edges of the paper itself when carrying it to and from the machine. The linotype operator and the monotype caster may be subjected to a spurt of molten metal, inflicting more or less serious burns. In all such cases, and for the burns and scalds met with occasionally in the process of stereotyping, and acid burns in electrotyping, first aid treatment is essential. Any delay in the administration of relief not only causes much unnecessary suffering, but also adds to the risk of some permanent injury arising through the accident. Every modern printing works should, therefore, be well equipped with appliances for dealing with emergencies of this kind."

The booklet referred to gives particulars of the firm's series of "Tabloid" First Aid outfits, which range in price from 2s. to £25, and are adapted for every requirement, either of the individual or of large numbers of employees. Messrs. Burroughs, Welcome and Co. will give every information to those interested in these equipments.

Printers' Managers and Overseers ASSOCIATION.

LONDON CENTRE.

The first monthly general meeting of the New Year was held on Tuesday evening at the Old Bell, Holborn, E.C., and in accordance with custom was devoted to music and social intercourse. A capital Smoking Concert programme had been arranged by the new President and Vice-President, Messrs. C. J. Gray and T. A. Catling, and was appreciately listened to by a large gathering.

Previous to the concert the minutes of the December meeting were read and passed, and the following nominations for membership were confirmed:—Mr. T. Bartlett (The London and Norwich Press, Norwich—composing), Mr. A. L. Gray (Messrs. Suffolk and Watts Ltd.—composing), and Mr. T. G. Hudson (Messrs. Suffolk and Watts, Ltd.—general overseer).

The smoking concert commenced with a pianoforte solo, "Temptation Rag," by Miss Catling, who rendered valuable service during the evening as pianoforte accompanist. The following artistes contributed to an enjoyable entertainment:—Songs—Miss Dorothy Ealen, "You—just you," "Susie Green," "Joshua," and "Bill"; Miss Winifred Allan, "Bird of Love Divine" and "Beyond the Dawn"; Mr. Edbrook, "Reuben Randall" and "Zummersetshire"; Mr. Catling, jun., "I hear you calling"; Mr. A. J. Smith, "Glorious Devon" and "Land of Hope and Glory"; Mr. James Craig, "Gone," "I asked for—"; Miss Dorothy Ealen and Mr. James Craig, "On the Stage"; Mr. Vincent O'Reilly, "The Old Black Mare," "The Old Side Car," "The Young Carabineer," "Father O'Flynn," "Paddy's Perplexity," and "Molly Brannigan"; Mr. Norman Payne, "Jonathan Jay" and "Parson Brown." Mr. George Kern recited Lowell's "Courtin'."

Encores were numerous, Mr. Vincent O'Reilly, Miss Dorothy Ealen, and Mr. James Craig being especially popular, the first-named giving capital renderings of delightful Irish ditties and old Irish folk songs, and the two latter exciting much merriment in each of their turns. The proceedings throughout were characterised by much cordiality and *bonhomie*, and this, along with the crowded attendance, makes a promising beginning of the New Year. A vote of thanks to the artistes and to Messrs. Gray and Catling for the excellent entertainment provided, was unanimously carried, on the motion of Mr. F. W. Seeley, and the evening closed with the singing of "Auld Lang Syne" and "God Save the King."

An American exchange says that "the end and aim of business are comprised in service to the customer on which there shall be a profit sufficient for the expenditure of time and energy involved. A rare but most valuable quality in the make-up of a printer is that which enables him to refuse to accept an order. Some printers never refuse, and the future will be bright for them only as they are lucky."

THE LIFE OF SIR ISAAC PITMAN (Inventor of Phonography). By Alfred Baker, F.J.I. Centenary Edition. Demy 8vo. x. + 392 pp. Price 2s. 6d. net. London: Sir Isaac Pitman and Sons, Ltd., 1, Amen corner, E.C.

The year 1913 witnesses the centenary of the birth of Isaac Pitman, a man of many interests and activities, but best known as the inventor of the most widely used system of shorthand—Phonography. It is fitting therefore that the present new edition of the most complete life that has been written should be published just now. Coming of West country stock, Isaac Pitman was educated at a small day school in his native town of Trowbridge. He left school at thirteen and began his business career as a clerk in a counting house. Some six years later he became a school teacher under the British School system, so assiduously had he devoted his spare time to studies. He acquired the art of shorthand, according to the system of Samuel Taylor, and subsequently taught it in the private school he was then conducting. In this ground the germ was cultivated which blossomed forth into the tree of Phonography. It is curious, however, what a trivial circumstance led Isaac Pitman to become a shorthand inventor. Wishing for a more concise and less expensive treatise on the Taylor system than the existing one, he prepared a small instruction book which he submitted in manuscript to his friend, Samuel Bagster, of Biblical fame. He agreed to undertake its publication, but first submitted the manuscript to a professional reporter for his opinion, who gave the sage advice that if Mr. Pitman would compile a new system he would be more likely to succeed in popularising shorthand. He at once started on the enterprise with characteristic enthusiasm, and from thence began a successful life's work which has left an indelible mark on his age. All this is told in interesting detail in the pages of the Life, along with his other enterprise—Phonotypy—which has not attained a like success, though he gave a great impetus to the interest in simplified spelling. Events are traced down to the honour of knighthood conferred on Mr. Isaac Pitman by Queen Victoria in 1894, and his subsequent retirement after an uninterrupted period of 57 years' work in connection with his invention of Phonography and of 52 years' editorship of the *Phonetic Journal*. Sir Isaac Pitman died on January 22nd, 1897, in his 85th year, and his body was cremated at Woking. The book closes with a number of useful appendixes, relating to the evolution and bibliography of Phonography, and throughout the pages are many interesting plates and illustrations elucidating the work, including as a frontispiece a capital gravure portrait of Sir Isaac Pitman, from the one by A. S. Cope, A.R.A., in the National Portrait Gallery.

"WILLING'S PRESS GUIDE, 1913."—All that is essential in a guide to the Press of the United Kingdom in a handy form and at a low price is contained in this well-known guide, and advertisers' directory and handbook, now in its fortieth annual issue. There is an alphabetical list of the newspapers and periodicals issued in the United Kingdom, with the year of establishment, when published, price, and publisher's name and address. Alterations, titular changes and amalgamations are chronicled in other lists, as is also the existing newspapers and periodicals of the 17th and 18th centuries, which is of much historical interest. They are conveniently arranged in chronological order. Besides this there is a list of telegraphic news and reporting agencies, lists of the principal colonial and foreign journals, and a variety of general information. It is published at 1s., bound in stiff boards, and is demy 8vo. in size.

"PRINTOLOGY," the house organ of the Regan Printing House, Chicago, in its current issue keeps up its high character as an example of good printing and neat arrangement of matter. The contents are particularly interesting to printers, and it may be news to our readers that Mr. Jas. L. Regan, the head of the extensive and progressive house that bears his name, is a native of London, who made his first acquaintance with paper and ink in the establishment of Messrs. Cassell, Petter and Galpin. Mr. Regan went to the United States in the later 60's, and since then has thriven so well that he has now from 500 to 800 people on his pay roll. The publication of "Printology" should do much to enhance the reputation of the House of Regan, as it is sent to every portion of the globe where printing is produced.

THE January issue of the *Royal Magazine* appears in a charming cover design by Elwin Neame, and is filled with good matter in the shape of clever stories, poems, interesting articles, etc., while the illustrations are, as usual, of a high class and well printed.

THE January *Magpie* contains nine complete stories, all readable and interesting, and is a capital three-pennyworth of fiction. The proprietors again offer a prize of £20 for the best short story sent in before the 25th inst.

THE varied and attractive New Year number of the *Windsor Magazine* worthily maintains the record of importance and value of the preceding Christmas issue, for within its cover appear stories and articles by authors so famous as Halliwell Sutcliffe, whose charming series, "The Open Road," is continued with a second complete episode; Justus Miles Forman, who tells the story of the loss and recovery of the second of "The Six Rubies," S. Macnaughtan, who contributes a most attractive story of the Christmas and New Year season; Fred M. White, who is responsible for a thrilling story of the Klondike, and the lamented Robert Barr, whose genial talent is represented in its most attractive vein, in the further exhilarating adventures of Young Lord Stranleigh in his American career. Mr. H. G. Wells, tells the story of a typical battle as fought with toy soldiers, along the lines of his previous article on "Little Wars," which attracted much attention in the preceding Christmas Number. An article on New Year Customs, ancient and modern, is full of quaint and curious facts connected with the ceremonies of the season, many of which are illustrated.

Claim by a Layer-On.

In the City of London Court, on Monday, before Judge Lumley Smith, K.C., George Crook, a printer's layer-on, of 44, Garisford-street, Bermondsey, claimed compensation under the Workmen's Compensation Act against his former employers, the Electrician Printing and Publishing Co., Ltd., Salisbury-court, Fleet-street, E.C., for the loss of the top of one of his fingers in an accident while working on one of their machines. Mr. Sanderson appeared for the plaintiff, and Mr. Harold Morris for the defendants. Crook was 16 years of age, and had worked for the defendants as layer-on, his wages latterly being 11s. a week and overtime amounting to several shillings a week. While working on his machine his hand was caught, and the top of one of his fingers had to be amputated, another being permanently stiffened. Crook went back after the injuries were healed at the same wages. Then it was alleged a dispute arose about overtime and he was discharged. He now claimed 11s. a week until the time of the trial, as he was now earning 12s. a week elsewhere. Crook said he would have been apprenticed if he had not been discharged. His overtime was reduced from 5d. to 4d. an hour. It was untrue that he used bad language, nor did he lose time regularly. Defendants' works manager said that when they took the plaintiff back, they gave him his old position and wages. He was only sent away because of his bad language and loss of time. The overtime was reduced because of an anomaly in the proportion to the wages. Plaintiff was quite well now. Mr. Morris said that the defendants had done everything they could for the plaintiff. They had offered him £30 in full settlement but he wanted £150. The employers had only to bear half the burden under the Act. Judge Lumley Smith, K.C., thought that the boy was sufficiently restored to be regarded as well. He gave the plaintiff a suspensory award of 1s. a week, so that if at any time he could not earn his present wages, he could then come for a substantial award. He gave the plaintiff no costs.

THE late Mr. Henry Simpson, for some time editor of the *Iron and Coal Trades Review*, has left estate valued at £943, with net personalty £898.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Shorthand by Machine.

Under the above title our contemporary, the *American Stationer*, describes a new shorthand writing machine that has made its appearance in the United States, which, if it lives up to its early performances should be a wonder, as at a contest in New York operators on two of the machines wrote at the rate of *592 words per minute*. The *American Stationer* describes the apparatus as follows:—

"The Stenotype is a simple little machine with a keyboard like that of a typewriter, but containing only twenty-two keys. The basis of its operation and recording is phonetic spelling. Unlike the typewriter, however, which requires a separate stroke for each letter, the Stenotype prints a chord of several letters at each stroke, on the average a word at each stroke instead of the six strokes required on the average by a typewriter.

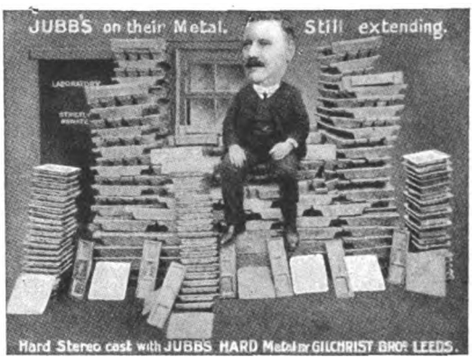
"This is accomplished by the peculiar system of dividing the keys. Seven of them, at the left of the keyboard, are used as initial consonants, and as there are only fourteen possible initial consonants, the other seven are supplied by arbitrary combinations of these seven keys, it being easily feasible to strike two letters with one finger. The right side of the keyboard contains ten final consonants, and the remaining eight final consonants possible in English speech are supplied by arbitrary combinations of some of these ten. In the centre of the keyboard are four vowel keys—A, E, O, U—I being supplied by a combination.

"These twenty-two keys and their combinations cover any possible combination of sounds, and with the addition of some 150 standard abbreviations constitute the sole system or code necessary for the operator of the Stenotype to master. Numbers are recorded simply by using an asterisk in combination with various letters.

"The advantages of the new system over ordinary stenography were declared to be: That it is easier to master (the operators in the contest referred to were said to have studied it only seven and eight months, respectively); that it was absolutely free from the puzzling uncertainties and inaccuracies of a shorthand system of straight and curved lines, recording as it does in *plain, typewritten letters of the alphabet;* that the record so written by any operator can be read by any other operator with equal ease; that in addition to accuracy and legibility it permits of a speed utterly beyond the limitations of all shorthand systems heretofore in use."

Trade with Newfoundland.

The *Board of Trade Journal*, in a return for the year ending June 30th, 1912, of the trade of Newfoundland, states that the total amount of stationery, printed music, advertising and other printed matter imported was $148,558, of which $35,772 was from the United Kingdom; $70,082 from Canada; and $41,854 from the United States. During the same period the books, annuals and magazines imported were from the United Kingdom to the value of $68,382; from Canada, $4,170; from the United States, $339,250. In the matter of printing materials, presses, type, etc., the imports from the United Kingdom were $4,217; from Canada, $14,239, and from the United States $23,241. The fact that United Kingdom trade with Newfoundland has made relatively slow progress in recent years, as compared with that of Canada and the United States, must be ascribed largely to the advantages of geographical situation enjoyed by the latter countries, and the resulting better facilities for the transport of their products to the Newfoundland market. There would, however, appear to be considerable scope for the increase of the United Kingdom share of the trade in several important articles.



THE Christmas number of the *Theosophical Path*, the official organ of the Theosophical movement, published at Point Loma, California, which is just to hand, is a fine issue full of readable articles, and illustrated with half-tone pictures of great interest.

Some Calendars for 1913.

IN a batch of samples of gummed papers, leather papers, fancy coloured papers and other specialities of Messrs. Samuel Jones and Co., Bridewell-place, E.C., is enclosed a calendar that takes the form of a measuring rule twelve inches in length, giving English and Continental measurements, the other side of the slip having a calendar for the twelve-months of 1913; quite a useful little desk or pocket article.

THE calendar sent out to the trade by Messrs. Mason and Mason, Ltd., printing ink manufacturers, has a bold design in blue and green, in the upper portion of which the firm's announcement appears in white letters, while the dates, which occupy the centre of the lower portion of the card are printed in chocolate on brown tinted paper. Attractive in appearance, it should act as a reminder during the year of the firm's specialties.

A NEAT pocket diary, bearing the well-known L. and M. mark on the front cover, comes to us from Messrs. Linotype and Machinery Ltd. It consists of a diary giving a week to a page, a note book, and a section having tables for giving out of paper, sizes of types, values, and other information, the whole bound in soft-grained leather with back loop pencil and strap clasp. The diary contains an accident policy for £1,000, and should be much appreciated by those lucky enough to be the recipients of copies.

THE Northern Press and Engineering Co., Ltd., issues a calendar consisting of twelve monthly tear-off sheets (16 by 10½ inches) each of which, on the upper part, has a half-tone illustration of one of the firm's many types of rotary machines or other appliances for printers, and at the foot of the sheet the dates are printed in clear bold figures in chocolate ink. The paper used is of excellent quality with a finish that shows up the illustrations and matter in an admirable manner. A complete calendar for the year appears on the last sheet.

"THE Rising Generation" is the title of the coloured picture that has been selected to adorn the calendar of Messrs. Coates Bros. and Co., Ltd., manufacturers of printing inks and fine colours, Abbey Mills, West Ham, and 8, Salisbury-court, E.C. It represents a stable yard, of the Georgian period, in which two gentlemen are showing their interest in a family of puppies that a lad is showing them. The picture is a good example of colour work, and is set in a dark tint mount, at the top and bottom of which appears the lettering of the firm's advertisement. The dates are on daily tear-off sheets, each sheet having a quotation from Shakespeare.

MESSRS. DARLING AND SON, LTD., Dashwood House, New Broad-street, E.C., are sending out a very pleasing calendar for 1913. It is both artistic and serviceable. Artistic in the charming little oval photogravure mounted in the centre depicting a pretty domestic scene, and the ornamental designing on the stout white bevelled edge card forming the mount; and serviceable in the boldness of the date block, a week appearing on each tear-off in large white figures on a chocolate ground, yet without undue prominence, as well as in the neat and effective way in which the addresses of the firm are included in the general design.

TO SERVE as a reminder to their customers throughout the coming year, Messrs. Blades, East and Blades, the well-known printers of 23, Abchurch-lane, E.C., issue quite a batch of calendars. One of these is a desk blotting pad (18 by 15 inches), the upper portion of which is arranged to form a diary for the year, giving a week's spaces to each opening, and plenty of room for memoranda, etc. The pad is neatly bound with grained leatherette, and is of a most useful character. A monthly tear-off calendar, a daily date case and a pocket diary accompany the pad, each article being excellent of its kind, and well finished, all of them being useful in the business office.

MESSRS. THOMAS AND GREEN, LTD., 196, Upper Thames-street, E.C., are issuing to their customers early in the New Year a calendar that is both artistically effective and practically useful. It is in the form of a drop calendar, the top leaf of which bears a pleasing architectural design, on the tinted face of which are the words, in large white letters, "Coil Papers" and the title of the firm, whilst in smaller letters appear the address, the Mill Nos., and the intimation that they were awarded a Gold Medal at the International Exhibition, Brussels, 1910. On a semi-circular panel in the centre is a symbolical figure design in colours. Underneath are samples of variously tinted papers that are always kept in web and can be supplied in any size. Let in the middle is a monthly tear-off calendar for 1913. The calendar is designed to show the wide range of tints in which Messrs. Thomas and Green stock their bank and bond papers, and also calls attention to the other varieties of paper they stock. Enclosed with this we have received specimens which show the remarkable adaptability of the firm's papers for embossing.

THE calendar issued by the *Belfast Evening Telegraph* is a neat production having a coloured view of "Belfast in 1858" on the top portion of the card, and the dates on tear-off sheets at the foot. A very neat, clear specimen of colour printing.

THE calendar of the Actiengesellschaft für Schriftgiessereé und Maschinbau, Offenbach, a/M., takes the form of a 50-page booklet, giving diary and memoranda spaces, tables for printers' use, and illustrations and specimens of machines, types, etc., as manufactured by the firm. The book is neatly printed, with page borders in green.

A BOLD and striking calendar is that issued by Messrs. H. Williams and Co., Red Lion Works, Warner-street, Clerkenwell, E.C., in which the firm announce their business of electro, stereo and photo-engravers', machinery, etc. On a card 18 by 12 inches the upper part is occupied by the firm's advertisement and a picture of stereotypers at work, the dates being in bold figures in red and black on monthly tear-off sheets on the lower portion. The card has a dark brown surface on which the lettering shows up well.

MR. ROBERT H. RUDDOCK, printers' valuer and auctioneer, 71, Fleet-street, E.C., is sending out to his clients a very handsome quarto diary and engagement book for desk use. It has memorandum spaces for every day in the week and for every hour in the day, while a cut edge index allows of rapidly turning up any given date. The book is finely bound in red leatherette, with marbled end-papers, and is titled on the front cover, "Engagements, 1913," Mr. Ruddock's business announcement appearing in quite unobtrusive lettering in the bottom corner.

MESSRS. G. B. PARAVIA AND CO., the well-known Italian firm of colour printers of Turin, Rome, Milan, Florence, and Naples, always issue a very artistic calendar produced in the highest form of the colour printer's art, and this year they have worthily maintained that reputation. A large view of a domestic scene in a cottage interior is beautifully reproduced in colours and is attached to a cut-out mount of an orange hue. A tear-off calendar is secured to the left-hand corner, and silk ribbon at the top for hanging up the calendar. The firm also issue a neat little booklet calendar in Italian, which contains an alphabetical list of the saints.

SINCE Messrs. John Haddon and Co.'s specimen book of types, borders and rules was issued in 1909 several alterations have been made from time to time in prices, discounts, weights of founts, etc., and in order to simplify matters when customers are making purchases, the firm has issued an entirely new price list which may be inserted in the specimen book instead of the old one.

A Textile Effect in Printing.

According to an invention that has been patented by Mr. W. Berry, a method of printing to produce textile and like effects on fashion cards, picture post cards, leaflets, posters, etc., consists in printing on one or more parts or on the whole of the picture, representation, or surface with an adhesive, depositing thereon black, white, or coloured flock or other fibrous material, and printing with line, tone, or other blocks to produce the desired pattern. The surface may be printed in black, white, or colour prior to the application of the adhesive and flock. The adhesive, which suitably consists of a mixture of varnish and flake white, may be coloured in some cases in a complementary colour to the flock, and the flock is suitably applied by rollers, or by dusting-on, or by means of a blast. The blocks for the various printings are prepared from a photograph of the article to be reproduced, the negative being used to obtain prints on sensitised zinc plates prepared by treating the bright plates with chloride of antimony to blacken them and then with bichromate. The plates are then inked up with a mixture of lithographic transfer ink and turpentine, and developed first in water and then in a weak acid, and the ink deposit is finally washed off with turpentine. From these plates the printing blocks are prepared, for example, a key block bearing the whole representation for the ground print, one or more blocks for the flat colour printing, one or more for the adhesive, and one or more for the final printing on the flock.

France's Coated Paper Industry.

The mills of the *Societé anonyme des anciens Etablissements* (Grillet and Feau) represent the latest development of coated paper manufacture in France. They are situated in Courbevoie, a western suburb of Paris, and it appears that M. Feau has made coated paper since 1865, when it was used for envelopes, champagne labels, etc. At this period the workman armed with a huge brush of soft silk "laid on" the coat of "colour," which he afterwards smoothed down by the use of a second brush. It took an apprentice some time to learn the knack of it, but there was little hurry half-a-century ago, the supply equalling the demand, and the champagne labels were highly admired as being able to support the contact of liquid without deterioration. They were sold at £5 5s. per 250 lbs. The present price in France is about half the five guineas. It was in 1880 that the first coating machine made its appearance in France. It was used for paper intended for chromo lithographic printing. M. Feau bought one and was well satisfied with the results. He has now 14, in addition to 25 calenders. The paper coating industry in France represents a turnover of £40,000 a year, and employs some 400 to 500 hands.

Institute of Printers and Kindred TRADES.

Annual Juvenile Party.

In the course of a twelvemonth many meetings are held representative of every class of the printing community. There are meetings of printing employers, of printers' managers and overseers, of the journeymen, and of the apprentices, but there is also an annual gathering of printers' children fresh from the printers' nursery, and, of course, it is the most most important—at all events, it would be impossible to convince one of the children that it was not. They keep its memory green in the back of their little minds the whole year round, occasionally trotting out a reference, until the date for holding it approaches, when it is the main topic of discussion in the nursery and elsewhere—mostly elsewhere. To say that they thoroughly enjoy themselves is to put it too mildly; they give themselves up entirely to the spirit of the occasion, and enter into the many amusements and enjoyments so thoughtfully provided for them with an hilarity and natural freedom from restraint that only children know how to exercise.

Last Thursday, 2nd inst., the St. Bride Foundation was *en fête* with Chinese lanterns, fancy paper and floral decorations, evergreens and pot plants, in celebration of the seventh annual Juvenile Party, and at four o'clock Santa Claus was there in all his traditional raiment to welcome the youthful guests as they arrived. The next proceeding was to refresh the little ones after their journey with a tea and lay a substantial foundation for the strenuous programme in front of them. Tea over, Santa Claus presented each child with bonbons, and they all assembled in the Large Hall for a flashlight photograph to be taken of them. This was taken by the *Daily Mirror*, who brought Baby Jumbo to the party, a baby elephant who, although only four years old, has been presented to royalty, and has toured all the principal English seaside towns collecting money for a good cause. Needless to say what a source of delight he was to the children, who crowded round him. He was the only child present who misbehaved itself. On his nurse's back being turned a moment, when standing in one of the corridors, he put his trunk under some fancy paper covering a large plant pot, and dragged out a lot of the mould over the floor, for which he was soundly smacked until he grunted.

A variety entertainment commenced in the Large Hall at 5 o'clock, the programme having been specially arranged to please children, including "Clown Dano," who contributed a mixture of conjuring, ventriloquism, music, funny tales, songs, etc.; "Flossie," an educated dog, and the always popular living marionettes ("Edgar Curtis, the Lilliputian Impressionist").

The leading attraction to the children, however, is the monstrous Christmas tree that is provided each year, laden with numerous valuable toys and sparkling from floor to ceiling of the lofty Hall with fairy lights. The Lord Mayor (Ald. Sir David Burnett) and the Lady Mayoress had consented to present the gifts, but at the last minute he was called away to Eastbourne where his son had been taken ill. Mr. Alderman and Sheriff Cooper and Mrs. Cooper stepped into the breach to everyone's entire satisfaction. Ald. Sir Wm. Purdie Treloar, Bart., was also present and made a delightfully humorous speech, as were also Ald. Sir John J. Baddeley, J.P., and Lady Baddeley, the Sheriff and Aldermen coming in their state robes. Mrs. Cooper presented the gifts to the children as they were taken from the tree. Afterwards a number of useful and valuable prizes were drawn for by Santa Claus and awarded to the holders of lucky numbers. The donors of the special prizes were Mrs. A. Watts, Mrs. G. E. Holloway, Messrs. W. H. Burchell, E. C. Langley, T. E. Naylor, Max Kraus, C. J. Drummond, G. Stokes, J. S. Morriss, E. R. Cook, H. D. Dickeson, T. H. Hewitt, A. Legg, A. Langley, E. J. Walker, G. H. Stockman, C. W. Iveson, W. Napier, R. B. Brett, T. W. George, H. C. Bolton, and F. A. Horle.

Quite a large number of children responded to the invitation extended by the Council of the Institute some weeks back for children of members to contribute to the entertainment programme, and the following programme was successfully carried out:—

Pianoforte Duet—
The Misses WINNIEFRED and KATHLEEN WOODMAN.
Song—
The Misses MARIAN and MARJORIE NAYLOR.
Violin Solos—
Master ARTHUR COX.
Songs at Piano—
Miss ELLA WINIFRED BURCHELL.
Violin Duet
Miss MARJORIE FAWCETT and Master STANLEY ANDREWS.
Recitation—
Miss MARJORIE NAYLOR.
Pianoforte Solo—
Miss DORIS WINIFRED GODDARD.
Song—
Miss DELA POINTER.
Recitation—
Miss MARIAN NAYLOR.
Recitation—
Miss DOROTHY DIX.
Pianoforte Solo—
Miss KATHLEEN WOODMAN.
Song—
Miss LORNA MADELINE BURCHELL.
Pianoforte Solo—
Master DENNIS IVESON.
Fan Dance—
Miss MARJORIE FAWCETT.
Pianoforte Solo—
Miss DOROTHY ANDREWS.
Violin Solo—
Master STANLEY ANDREWS.

Following the entertainment dancing was indulged in for a time, and a most enjoyable evening was brought to a close with the singing of "Auld Lang Syne."

The musical entertainment was under the direction of Mr. W. H. Burchell, joint hon. sec., and Santa Claus was impersonated with indefatigable energy by Mr. Job S. Morriss, who also subsequently acted as M.C. of the dancing. These gentlemen, together with Messrs. E. R. Cook, A. Watts, and R. B. Brett, who helped in the onerous task of decorating the Christmas tree, are to be congratulated on the very successful results of their unsparing exertions on the children's behalf.

Trade Journals as Advertising MEDIUM.

The Hon. Elbert H. Gary, chairman of the United States Steel Corporation, in the course of an address at the meeting of the American Iron and Steel Institute, recently, compared newspapers with trade journals in the following words:—"It is true that we sometimes read in the newspapers criticisms which are unfavourable, but which misrepresent the facts. As a rule, the newspapers are fair and considerate, and mean to publish the truth and to do the right thing; but, like all others who are compelled to rely upon information which is gathered from various sources, they are frequently imposed upon, and do an injustice to those who are affected, without intending to do so. We have been fortunate in having connected with our efforts editors of the principal trade journals, who have always been fair and accurate in their statements."

The journal is the best possible representative of the interests of the particular trade it covers. Its editors understand all the technique of the trade—its needs, limitations and possibilities, and through this special knowledge the trade paper wields in its field an influence equalled in scope and power by no other kind of publication. It works for the greatest benefit of its readers and advertisers, not only in their own trade, but among the public also, for in its sphere the trade paper is known to speak from a complete knowledge of all the facts concerned; from a fund of information and experience unknown to the newspapers or magazines read by the public generally.

To its advertisers the trade journal can offer the services of a corps of trained men, experts in the preparation of commercial or technical advertisements and reading notices, writers who make no mistakes, because they are so thoroughly familiar with their subject.

The feature of reading notices emphasizing the general or special offerings of manufacturers or jobbers cannot be overestimated as to its value in placing before the reader correct descriptions in terms understood by the trade. Such reading notices are an inseparable part of the service rendered to the advertiser and conjoin with personal efforts in the interests of publicity for him.

Circulars, booklets and similar publicity methods are not at all comparable with an attractive announcement in a trade paper, as they are regarded as biased personal statements, and weighed as such. The powerful influence of a conservative, reliable trade journal among the dealers must be acknowledged, and the advertiser receives the benefit of this influence. The care with which every number of a trade paper is scrutinised by its readers is continually being demonstrated. The misspelling of a name or other trifling error or omission is noted immediately by readers, and they lose no time in suggesting the necessary correction.—*Inland Stationer.*

THE death has occurred at Bury, of Mr. Alfred Barlow. A printer by trade, Mr. Barlow was at one time a foreman in the offices of the *Bury Times*. He was a member of the Manchester Branch of the Typographical Society, and was one of the founders of the Bury Branch of that organisation.

MR. A. LEINVEBER has patented a process for producing yarn from short fibres such as cellulose, wood pulp, paper pulp, asbestos, and similar material. The moist web of pulp from the flat sieve is divided into from two to four parallel strips, and wound to form strip rolls, and such strip rolls are divided by suitable mechanism, such as rotary cutting dics, into uniform narrow thread strips. The narrow thread strips are formed into preliminary yarn by rounding with the aid of twisting, condensing, or similar devices, and are finally spun and wound in conical layers to form hollow spools or cops, which allow of being unwound from inwards to outwards. In this way the moisture is maintained and the subsequent moistening for weaving rendered unnecessary. The preliminary yarn itself may be used without the subsequent spinning, and may be duplicated or twisted in multiple.

APPRENTICE

Instruction in the Philippine Islands

One of the most vexing questions confronting the photo-engraving industry to-day is that of apprentices. Viewed from any one of its many angles its importance is too evident to be denied. At the present time it is, perhaps, the real cause of more disputes between the employer and employee, than all the other disputed questions combined. As to its effect upon the future, those employers who devote time and thought to the study of the future needs of the industry are in despair as to the probable solution of this most important question.

According to an article in the *Printing Art*, the Bureau of Engraving in the Philippine Islands is under the direct supervision of Mr. John S. Leech, Director of Printing, and of the system of instruction adopted there he has the following to say: "It is not claimed that this is the last word in instructing apprentices in the trades mentioned, but as the apprentice question is one of the most important confronting employer and employee, it is submitted in the hope that intelligent discussion and criticism of the principles upon which it is based may be provoked to the end that a system may be evolved which will reflect the highest credit upon the industry.

"The craftsmen instructors of the Bureau of Printing are handicapped in a degree by various things not ordinarily encountered in American and European printing offices, as the personnel of the workmen consists of representatives of the many groups of Philippine peoples, whose dialects are as distinctive as English and German or French and Spanish, and because of the existence of the more or less class distinction characteristic of all Orientals."

Mr. Leech has issued a full list of the forms and charts used in connection with this system, copies of which can be obtained from him on request. We submit here an outline of the system as described by Mr. Leech.

"It is the aim of the Bureau of Printing system of apprenticeship to impart such instruction as will enable young men to acquire practical knowledge of the various branches of the printing trade and its auxiliary occupations. These are the trades of printer, pressman, bookbinder, photo-engraver, electrotyper, stereotyper, machinist, electrician and engineer.

"The apprenticeship covers a period of four years. During that time the apt student becomes familiar with each specialty of his trade. While it is not contended that a superior workman can be evolved from the crude material within that limited period, the object is to instill the fundamentals and to rely upon experience for perfection.

"The efficacy of the system here outlined has been demonstrated in the Bureau of Printing, notwithstanding the fact that the American craftsmen instructors are at times greatly handicapped by reason of the absence of a common language. Owing to the large representation of so many distinct dialectal divisions, students upon entrance are frequently unable to converse with each other, and at times the instructor is compelled to supplement his verbal orders by actual demonstrations. The policy of the director in making attendance at night school for instruction in English compulsory is gradually surmounting those drawbacks, and it may be stated that the four-year period of systematic instruction has proven adequate to turn out workmen having a knowledge of all specialties of their trades. It has been the aim of the director to turn out an artisan competent to undertake any class of work pertaining to his trade. The advantages of specialisation are realised, but it is believed that the best method of determining the branch in which the student will prove the most efficient is by requiring his apprenticeship instruction to include them all.

"A prerequisite to the success of any apprenticeship system is the employment of journeymen as instructors who are thoroughly skilled in their work. They must have not only unusual ability and the faculty of imparting their knowledge, but, more important, the disposition to impart that knowledge in the freest and fullest extent.

"The attitude of an instructor toward the apprentice is similar to that of a teacher and pupil in a school. The apprentice is given a certain task and shown the proper manner in which it should be performed, the instructor taking a personal interest in each apprentice. Every operation is carefully explained, so that the apprentice is never forced to acquire his knowledge through chance contact with other workmen. A competent instructor or supervisor should be able to classify and make allowances for the idiosyncrasies of the boy in his charge. He should also be competent to determine, at the expiration of the first class period of apprenticeship, whether his charge is fitted to continue at the trade to which he is assigned. The instructor should instill into the mind of the apprentice the benefits to be derived through exerting every effort toward securing the best results and never permit his charge to become a mere animated machine. Inability to comprehend mechanical details, continued indifference, failure to make an honest effort to take advantage of the craftsman's instructions, and perfunctory performance of listless 'time servers' are carefully noted, and the offenders promptly separated from the service to make room for worthy applicants.

"All of the specialties of each trade are distributed over seven periods, namely, six class periods of six months each, during which the student is designated as an 'apprentice,' and one year in which he is known as a 'junior craftsman.' In a strictly industrial school the routine of these specialties could be closely adhered to, but in a producing establishment, where there is often a lack of variety in work orders, certain specialties must necessarily be postponed until correlative work is available.

"Instruction relative to the operation of a machine is imparted by the immediate instructor, while the technical knowledge of the machine and its parts is acquired from the chief machinist. All power-driven machinery of the Bureau of Printing is inspected three times a year. Two of these inspections are made for the purpose of reporting on the condition in which machinery is cared for by the operator, and at the third inspection the machine is completely overhauled. The chief machinist in all cases renders a report as to his findings. If the report states that a machine is not properly cared for, the employee in charge of such equipment receives a letter of reprimand, which affects his efficiency record. For the information of all employees—apprentices, junior craftsmen, and craftsmen—a comprehensive list of technical terms and definitions, peculiar to the trade in question, is posted in a conspicuous place and is accessible at all times. With these definitions, instructions are also given relative to the performance of the more intricate operations of each trade. Each apprentice is orally examined by his foreman as to his knowledge of such terms and definitions, and none is promoted who does not possess information to the extent of securing a passable rating.

"Apprentices are rated semi-annually on quantity of work; quality of work, aptitude and adaptability; habits, character and conduct; and attendance and physical condition. This rating is required by the Government, but could be eliminated in a commercial establishment.

"Promotions from one class to another are made when the apprentice has qualified in all the specialties included in the incumbent class, and the recommendation of the foreman is accepted as proof of fitness, no examination being required; but the apprentice must have completed the full period of six months, as the class period is extended in an amount of time equal to that which may have been lost for any cause whatsoever.

"On the daily time slip of each division, after the name of each apprentice and each junior craftsman, there appear the specialties which have been completed or on which he is working. This information is carried so that the exact status of an apprentice may be ascertained without referring to the office records.

"Apprentices are classified for the purpose of imparting instruction systematically. A certain number of trade specialties are segregated and assigned to each class period. These periods are designated as Class 6, Class 5, Class 4, Class 3, Glass 2 and Class 1, the apprentice on entrance being assigned to the work of Class 6. The length of service required in each class period is six months, or a total of three years from the time an apprentice enters Class 6 until he graduates from Class 1 and becomes a junior craftsman.

"It has been demonstrated that changing the apprentice's classification, with a corresponding increase in compensation, confers a mark of distinction and gives him an incentive to maintain his interest in the work. As new kinds of work are introduced at the beginning of each class period, it may be readily surmised that an apprentice will exert his best efforts to master the specialties of his current class in order to advance to a welcome change from the monotony of a class-end period.

"Upon entrance, each apprentice is given a pamphlet containing the office rules. Infractions of the rules and cases of carelessness and insubordination are made the subjects of adverse reports in the form of letters of reprimand to the offending employees, who are given opportunity to make statements in their own behalf. Adverse reports are also made in cases of errors which are manifestly due to carelessness or inattention. These reports are filed, and when the employee's efficiency record is compiled a deduction is made for each. Letters of commendation are given to apprentices for meritorious work.

"The first class period of six months is considered ample in which to determine an apprentice's fitness for the trade to which he has been assigned. If he shows inaptitude, particularly with respect to mechanical details, he is advised to seek other fields of labour. Justice to the employee as well as to the employer demands frankness in a matter that influences the formative period of a boy's life. If an apprentice demonstrates aptitude during his first class period, but is unable to qualify for promotion within the prescribed period of six months, he is retained in the class until he has thoroughly mastered the specialties of that class period, the extension, however, in no case to exceed three months. If, after three months' extension, an apprentice fails to qualify for promotion, he is separated from the service.

"After an employee has assumed the duties of craftsman, additional responsibilities are placed upon him and every effort is made to inspire him with the confidence necessary to enable him to act in a minor executive capacity, such as assistant to the foreman or in charge of a group of workmen."

A BOOKLET of interest to all patentees has been issued by the Letters Patent Insurance Co., Ltd., of King's House, Kingsway, W.C. It explains how a manufacturer or patentee may make himself secure against the risks of infringement of a patent, and describes the advantages of securing one of the company's policies, by which almost every risk connected with patents, designs, or trademarks may be covered. The booklet is well worth a study by inventors.

THE UNIVERSITY OF LEEDS LECTURES.—The success which has attended the experiment initiated two or three years ago by the University of Leeds of holding courses of lectures dealing with technical subjects delivered by outside specialists, has encouraged further extension of the system. During the coming year the University has arranged for the delivery of the course of twenty lectures on the chemistry and technology of printing inks, oils, etc., on Mondays and Fridays at four o'clock p.m., commencing January 13th. To supplement the lectures a tutoral class will be held on Wednesdays, and a course of laboratory work has been arranged.

TO TRADE BOOKBINDERS, BOOKBINDERS' PLANT AND MATERIAL MANUFACTURERS AND DEALERS, PUBLISHERS, LIBRARIANS, AND OTHERS

INTERESTED IN THE BOOKBINDING INDUSTRY.

THE Publishers of the *BRITISH AND COLONIAL PRINTER AND STATIONER* have pleasure in announcing that an ILLUSTRATED MONTHLY SUPPLEMENT to that journal is now devoted to matter concerning the BOOKBINDING TRADES.

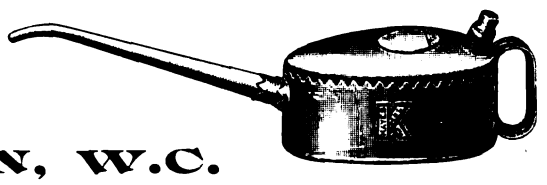
All branches of bookbinding are dealt with, from practical and technical standpoints, and the historical and artistic aspects of the industry also receive attention. Illustrations of hand-tooled bookbindings and publishers' cases which are remarkable for their artistic design, their historic interest, or their novel character are presented from time to time.

The BOOKBINDING SUPPLEMENT appeals to all those who are interested in bookbinding whether as a trade or as an art, as all phases of the subject receive their due share of attention in its columns.

The Editor will welcome any news of trade interest that may be sent him, and is prepared to consider original articles of a technical and practical character, with a view to their publication. Information concerning the working of the technical classes in bookbinding, and notices of meetings of trade unions and other bodies associated with the bookbinding industry, are also invited; arrangements can usually be made, if desired, to report the latter, as well as lectures, etc., for the BOOKBINDING SUPPLEMENT. Illustrations and particulars of new machinery and appliances, and information concerning new materials and methods for use in the trade, are likewise of interest. The publishers having no end to serve save the presentation of matter of value to the various branches of the trade, the pages of the BOOKBINDING SUPPLEMENT are open to all, employers and employed, unionists and non-unionists, for the free discussion of trade matters.

As far as READERS are concerned, copies of those issues of the *British and Colonial Printer and Stationer* that contain the BOOKBINDING SUPPLEMENT are supplied at the rate of 2/6 *(payable in advance)* for twelve numbers, including postage. (Foreign postage 6d. extra.) Single copies, 2d. each.

With regard to ADVERTISEMENTS, the bookbinding trade announcements are placed in a POSITION NEXT TO OR FACING READING MATTER in the BOOKBINDING SUPPLEMENT. ADVERTISING RATES sent on application. Arrangements have been made to circulate the journal in quarters likely to be most productive to advertisers of a return for their outlay, and no effort is spared to study the interests of advertisers and readers alike.



Orders for advertisements in and subscriptions to the BOOKBINDING SUPPLEMENT issues should be addressed to the publishers:—

Typical Modern American Binderies

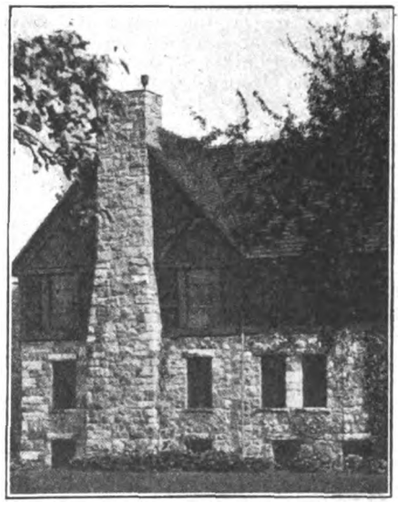
VIII.

The Roycroft Shop.

In our Bookbinding Numbers of November, 1910, and March, 1911, we had some remarks about the art industries establishment—known by the above title—of Mr. Elbert Hubbard, at East Aurora, in New York State, some 18 miles from Buffalo.

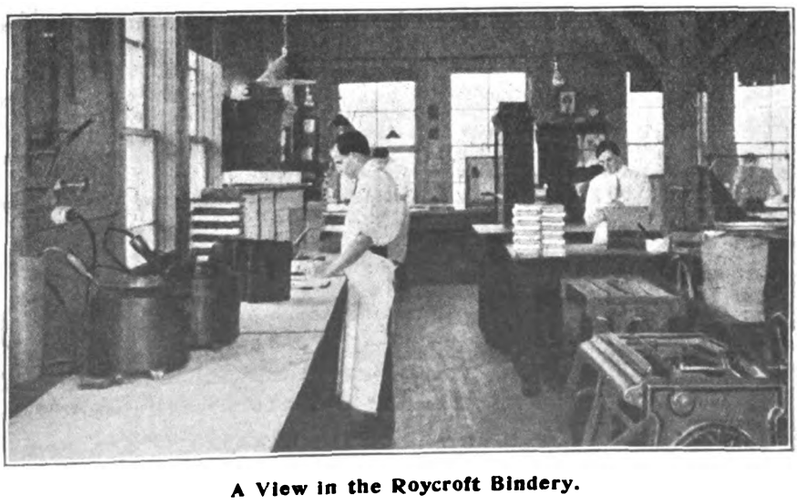
Although, in dealing with the place again, we do so under the caption of Typical American Binderies, the "Roycroft Shop" really constitutes a type of its own, as it may be considered as an essentially modern establishment conducted to a large extent on ancient lines, *i.e.*, the art of the handicraftsman is supplemented by modern mechanical aids.

Art furniture, jewellery and stained glass are among the products of the Roycroft Shop, but one of its most important departments is the Press, with which, of course, we are mostly concerned in this article. Mr. Hubbard, who is well past his half-century, has been many things in his time, from cattle drover to soap boiler—neither of which occupations provided much scope for the exercise of his artistic faculty—but appears to have found his proper vocation when, some years since, following a retirement from the soap business and a subsequent tour through Europe, he started a little paper in East Aurora, where he had settled down. One thing leads to another, and so in due time Fra Elbertus—to give him his Bohemian title—decided to turn art book printer, on the lines made famous by the late William Morris. At the start, at any rate, Hubbard was a genuine Morrissite, as he took an old cottage and bought a hand press—still in use for proving purposes, but as his new business grew, and his aspirations and needs with it, he soon found it desirable to throw off the shackles which a mere following of Morris would have imposed on him, and decided to put down modern plant and machinery. So in the Roycroft Shop of to-day there is not merely much artistic stone and half-timber work, but a tall chimney shaft soars aloft, naked and unashamed, and the press-rooms are filled with the most up-to-date American machinery, and lit by electricity from the Shop's own power plant. Thus, although most of the books produced are of the Kelmscott order, they are got out by quite modern methods. High-class catalogue work is one of the specialties.



The August number of the Boston *Graphic Arts* contained a long and elaborate illustrated account of the Printing Department of the Roycroft Shop, and from it we reproduce the following particulars, and illustrations of the bindery which accompany them. The first picture shows a part of the exterior, and serves to give an idea of the style and character of the buildings.

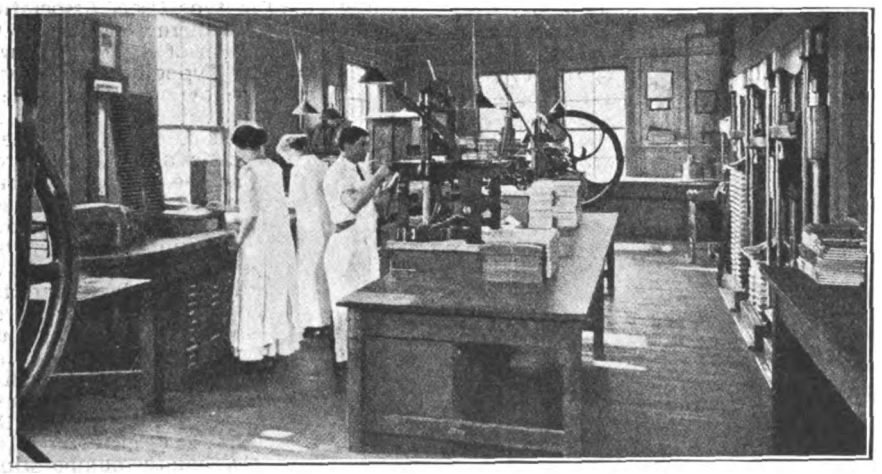
The equipment of the bookbindery is much more complete and elaborate than is usually the case in printing plants of similar capacity, there being three stamping presses, together with paper cutters and standing presses of the latest type, a Smyth sewing machine, and machines for paring and folding leather. The pamphlet bindery contains six folding machines of the newest type, all equipped with Cross automatic feeders; three Smyth pamphlet sewing machines, and an adequate complement of wire stitchers and bundling presses.



Notwithstanding this excellent mechanical equipment, by far the greater number of Roycroft books is bound entirely by hand, all the cover designs being originated by Roycroft workmen. A large stock of the costliest levants, pigskins, parchments and imported novelty calfskins is constantly maintained, and a corresponding stock of imported hand-made end-papers and cover-papers. Direct importations are made of hand-made book paper, the invoices for which run into thousands of dollars. Some of the richest and most costly bindings made in the United States are products of this Shop. Some are in hand-tooled and inlaid levant, and some in modelled leather. Souvenir bindings from this bindery have gone to many prominent personages in America and several to royalty

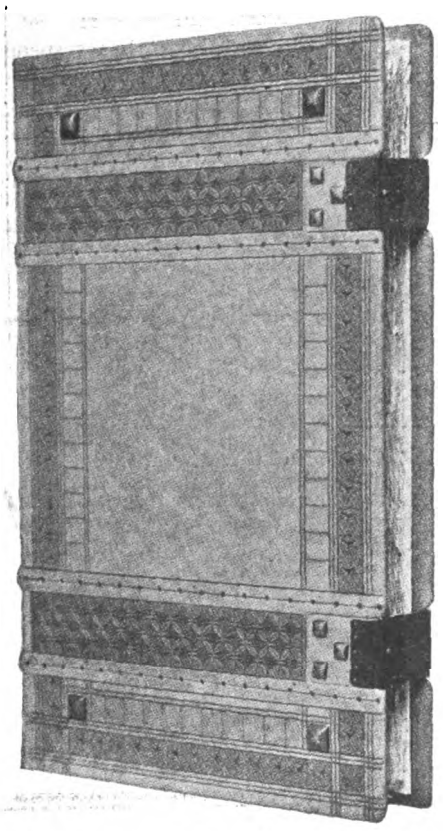
The Roycroft Bindery: Book Folding and Sewing, etc.

A Corner of the Bindery at the Roycroft Press.



A View in the Roycroft Bindery.

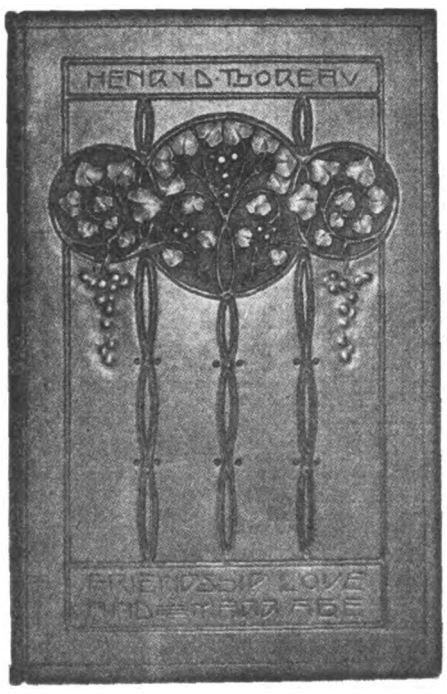
Digitized by Google



in Europe. The modelled leather department co-operates with the bindery in producing some of the individual bindings that have made Roycroft books famous.

Charles Youngers, the head binder, is a purely Roycroft product, having served his apprenticeship in the Roycroft Shop under some of the most skilful of modern binders, who have been with the Roycrofters from time to time. He is ably assisted by Lorenz Schwartz, who is a past master of hand-tooled and fine levant binding.

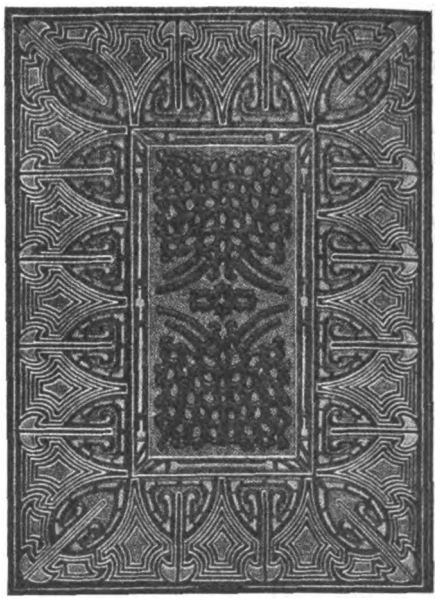
The most approved systems and mechanical equipment are installed throughout the place, and every night the floors and premises are made as clean as a well-kept kitchen.



The Roycroft Bindery : Stamping Machines and Standing Presses.

A Modern-Antique Binding by the Roycrofters.

Beautiful grounds and play spaces surround the Shop, and all measures for health are encouraged. A large farm is part of the institution: the employees maintain a brass band, baseball team and fire brigade, and there is always the excuse of a benefit dance for one or the other.



We illustrate three typical examples of binding executed by the Roycrofters. The tall volume with clasps is in full pigskin, the doublure is from an American Bible, whilst the third book is invested with one of the

A Modelled Leather Binding from the Roycroft Shop.

modelled leather covers for which the Roycroft Shop is famous. Not long since, Mr. Thos. Lawrence, a wealthy American book lover, ordered a set of Elbert Hubbard's "Complete Works," in forty royal 8vo volumes of 300 pages apiece, to be bound in modelled leather for his library, at a cost of over £40 each. The binding of ordinary sets costs a minimum of £2 per volume.

THE late Mr. Edward Hanson, of the firm of Messrs. Ballantyne, Hanson and Co., Edinburgh, the well-known printers and publishers, has left estate of the gross value of £2,611.

A Roycroft Doublure.

IMPROVEMENTS IN Rotary Printing Machines.

A recently published French patent, by Messrs. Thènard and Cie, relates to the simultaneous printing of engravings and text on rotary machines and new mechanical devices for this purpose. Engraved plates must often be placed on a different cylinder to that for the text, so that a special ink can be utilised and the engraved plates brought into contact with a special blanket cylinder. In many rotary machines for newspapers two plates are placed on the same cylinder, which is expensive in the case of engraved zinc or copper, and from the point of view of economy one is preferable. When there are two engraved plates for the same page one of them passes almost completely around a cylinder a half less in diameter, the missing part of this plate corresponding to the width of the margins and the text at the head and foot of the page. Thus to have only one engraved plate for two of text a cylinder can be used, for the engraved zinc or copper plate, half less in diameter than the text cylinders, and performing two revolutions, whilst the latter only make one. On the other hand, in the case of finely ruled engravings on copper it is advisable to prevent them coming into contact with the paper which, unless art paper, takes ink badly or involves great pressure. There is therefore an advantage in first printing from the engraved plate on a cylinder coated with rubber or other material suitable for transfer to paper. It is the combination of these elements, viz., special cylinder for engraved plates one-half less in diameter than the text cylinders (a transfer cylinder and text cylinder) which form the object of this new invention, and also a special device to bend the engraved plates and one for wiping them. The paper runs on two rolls and then between a blanket cylinder and the one coated with rubber or other material. When thus printed, the paper passes over four other rolls and then between the text cylinder and a blanket roll where it is printed directly on the same side. Then printing goes on as usual. The transfer cylinder is in contact with a cylinder upon which the engraved plate, the curve of which may exceed one half the circumference, is fixed. This plate can be slipped on the cylinder by aid of a special device. The transfer cylinder may be of the same diameter

as that for the engraved plate, or any multiple of this diameter, and it is half the diameter of the text cylinders. To avoid having to stop the machine to wash the plates, there is a roll, covered with felt or other very pliant material, and dipping into a basin containing petroleum or other suitable liquid, which comes into contact with the engraved plate after it has printed the transfer roll, and then two rolls wipe and dry the plate to begin work again.

History of Printing & Bookmaking.

The first of a course of six lectures on "The History and Progress of the Arts of Printing and Bookmaking," arranged jointly by the Governors of the St. Bride Foundation and the Council of the Institute of Printers and Kindred Trades, was given in the Large Hall of the Institute, on Monday evening, by Mr. R. A. Peddie, librarian of the St. Bride Foundation Typographical Library. There was a large attendance.

In introducing this first lecture, Mr. Peddie said he was proposing to treat the subject in rather a different way from the ordinary method of dealing with the history of printing during the fifteenth century. It had generally been dealt with by the enumeration of a large number of names of famous printers and a catalogue of the books they printed. He proposed to deal with the fifteenth century book from the point of view of the invention of movable type in the first place, then of the types that were used by the printers, the forms of the book, the introduction of the title-page, signatures, colophons, and all the other parts of the book, bringing the history up to the end of the fifteenth century and stating the position printing then occupied. He was dealing entirely with the printed book produced by movable types, and not the block books. Four towns claimed the invention of the art—in Germany, Holland, France and Italy respectively. Mayence, however, had the great documents connected with printing, though Haarlem, with great traditions behind it, runs it very close for the claim of the invention.

The lecture was illustrated by a number of interesting lantern slides, the first of these being an "Indulgence" printed at Mayence in 1454, the first printed document we know of possessing a date. An illustration of the Mazarin Bible, afterwards known as the Gutenberg Bible, and the 42-line Bible, from the number of lines in the page, was next shown, and also a mounted reproduction from a calendar attributed to the year 1448, and recently discovered. This took the history of printing back several years, remarked the lecturer, but there was considerable doubt about it, and its date could not yet be said to be proved. The type was that of the 42-line Bible. Then followed illustrations of a specimen of an unknown press in Holland dating somewhere between 1430 and 1450; an initial letter in the first page of a Psalter printed at Mayence by Fust and Schaeffer in 1457; a sheet of the first type specimen book ever published, printed by Erhard Ratdolt, at Augsburg, in 1486; a specimen of the first real Roman type ever used, of uncertain date, but certainly before 1470 and possibly as early as 1465, and first used in Strasburg; several examples of early book illustration, including one of the first books printed at Bamberg, dated 1461, the first specimen of book illustration by Pfister, who printed nine books, none of which are dated later than 1462, and by Gunther Zainer, 1470, who was the first to print books with illustrations as a regular thing. Colour printing in the fifteenth century having been referred to, and the book of St. Albans, dated 1486, which contains illustrations in colours, Mr. Peddie next dealt with the physical part of the book—the colophon; the first real title-page, attached to the Bull of Pius II. printed at Mayence in 1463; signatures, used first in 1472, and woodcut initials. The first efforts at music printing in Rome and in England having been touched upon, the lecturer concluded with some remarks on the rate of production in the fifteenth century. This amounted to 300 pulls per day, which, practically speaking, was the rate of the hand-press to-day. A solid thick paper was used, entirely composed of rags, and it was damped very considerably before printing, and there was a heavy dwell on the press in order to get the impression. With regard to the spread of printing in the fifteenth century, Mr. Peddie stated that the British Museum had 10,000 printed fifteenth century books, of which Germany accounted for 3,200, Italy 4,100, and the rest were divided amongst the other countries, so that Italy was at the head at present, but new German books were continually being found whilst new Italian books were not.

Mr. Peddie's next lecture, on Monday evening, January 20th, will deal with printing in the sixteenth century.

A Printing Trade Dispute.

Sir Albert K. Rollit, the sole arbitrator in the dispute in the printing trade, in which were concerned the Federation of Master Printers, the Linotype Users' Association, the Federation of Northern Newspaper Owners, and the Federation of Southern Newspaper Owners, and the Typographical Association, has made the following award:—He says: "Having received and considered an agreed statement of facts and also statements in writing by the parties and other documents, I held a sitting at the London Chamber of Commerce on December 6th, 1912, when the parties appeared before me, stated their respective cases, and supported them by personal and documentary evidence, and when I suggested conciliation in place of arbitration, for which purpose I offered an adjournment, this was declined. The following question formulated by the parties was ultimately submitted to me by them for my decision:—

"'Assuming the proportion of men to machines is maintained, are (or are not) the employers entitled to place one man in charge of more machines than the number stipulated in the agreement on rules dated May 6th, 1911 (page 6, machinemen's rules, Rule LX.)?'

"And having since the hearing carefully considered the statements and evidence of the parties, the documents handed to me, and the shorthand writers' notes of the proceedings, I find and decide that, according to my construction of the rule referred to, I must answer the question submitted to me in the affirmative, and I decide and award accordingly.

"This being an industrial difference I charge (as usual) no fee, and I award that the parties bear equally any other charges incurred by both or either of them, to be taxed, if necessary, by myself."

THE *Chicago Evening World* has suspended publication, owing to financial difficulties. The *World* was an outgrowth of the *Chicago Socialist*, which quit existence two days before the pressmen's strike in Chicago last summer. Blame for the sudden failure of the *World* is attributed to the pressmen's union, which placed the brunt of the newspaper strike upon the shoulders of the Socialist organ. There is a feeling among some of the Chicago labour organisations favouring the re-establishment of the paper.

Trade Notes.

TENDERS ARE WANTED by the South London District Branch I.O.O.F., M.U. Friendly Society for the printing required for the year ending February 28th, 1914. Particulars from the offices, 86, Walworth-road, S.E.

A BURY printer named Fred Thompson was admitted to the infirmary last week. While following his employment as a letterpress printer he received injuries to his right hand which necessitated the amputation of two fingers.

ACCORDING to *Kemp's Mercantile Gazette* there were no failures in the printing and stationery trades of England and Wales for the week ending Friday, January 10th; the number for the corresponding week in 1912 was five.

FOR the supply of stationery required for the various departments of the Wimbledon Council from January 1st, 1913, to December 31st, 1915, the tender of Mr. S. T. Green, 6-9, Albion-buildings, Aldersgate-street, E.C., has been accepted.

THE death is announced of Mr. Benjamin Taylor, of Glasgow. Mr. Taylor wrote for the *Glasgow Herald*, and contributed to other newspapers and to various weekly journals and monthly magazines, mainly on industrial and commercial subjects.

INSURANCE STAMPS.—The National Health Insurance Commission (England) give notice that health insurance stamps at 7d., 6d. and 4½d. can now be obtained in rolls of 600 stamps for use in stamp-affixing machines. Enquiries as to the arrangements for the sale of these rolls may be made at any head post office.

TENDERS are invited by the Egpytian Ministry of Finance for the supply and delivery of 160 oak filing sections and 52 oak index cabinets. Tenders will be received at the "Economat Central du Ministère des Finances," Cairo, up to noon on February 27th. A copy of the cahier des charges may be seen by British makers at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall-street, London, E.C.

PIRATED MUSIC.—At the Liverpool Police Court, on Friday, an old man, described as a printer, was fined 40s. and costs on each of three counts, or £6 16s. 6d. in all, for infringing the Act by selling copies of pirated pantomime songs and for having songs and printing plates in his possession. The defendant admitted the first two informations, but denied that he had plates on his premises. He had been selling pantomime songs since 1881, and was quite ignorant of the new Copyright Act.

AT the conference of the English Association at University College, Gower-street, W., on Saturday, Mr. Percy Simpson, in a paper dealing with the value of the plain text in literature lessons, said he believed that a powerful factor in the development of ignorance was the number of boys' magazines filled with short and exciting and amusing stories, carefully written down to the level of boy readers and often full of slang. A boy reads those without the slightest call on his intelligence or judgment. But when he quitted those shallows he was hopelessly out of his depth.

FOR AN INSURANCE BABY.—The Insurance Act benefits began last Sunday at midnight. Mr. Arthur Spurgeon, the general manager of Messrs. Cassell and Co., Ltd., proposes to celebrate the institution of this historic date by presenting a silver cup, with suitable inscription, to the first little Cassellite whose mother receives the maternity benefit provided by the Act, and whose father has been in the employ of the House of Cassell for twelve months prior to January 1st. The cup is now on view at La Belle Sauvage-yard.

THE annual report of the Newspaper Press Fund states that 177 new members have been elected during the year, and eighteen have been re-elected. Twenty-five have died, ten have resigned, and forty-five have been removed from the roll, which now comprises 2,357 members (a net increase of fifteen on the year), of whom 1,027 reside in London, 1,284 in the country, and forty-six abroad. One pensioner has died during the year, and six new pensions have been awarded. There are now forty-seven pensions being paid, eleven from the Campbell Clarke Fund, amounting to £330; four from the Sir John Willox Fund, amounting to £111; and thirty-two from the general fund, amounting to £1,070, making a total of £1,511. Twenty of the annuitants are members, and twenty-seven are widows of members. The grants and pensions disbursed during the year amounted to £5,196, the largest sum in the history of the fund. The sum of £4,000 has been received from the trustees of the late Sir John Willox on account of his bequest of £10,000 to the Newspaper Press Fund. The money has been invested.

THE death is announced of Mr. Richmond Seeley, of the publishing firm of Messrs. Seeley, Service, and Co. The deceased gentleman was in his 80th year.

A NEW morning paper is to appear in Montreal shortly. Montreal has but one English morning paper at present, the *Gazette*, which has enjoyed a monopoly for nearly half a century.

A FIRE broke out the other day on the premises of Messrs. White and Pike, Ltd., printers, Moor-street, Birmingham. The outbreak was on the fourth floor, used as a label-punching room, and was soon extinguished.

THE following tenders for the Police Department have been accepted by the Town Council of Aberdeen:—For printing, Messrs. G. Cornwall and Sons, Castle-street; for stationery, Messrs. L. Smith and Son, McCombie's-court.

THE Printers' Medical Aid and Sanatoria Association proposes adding to their sphere of usefulness by initiating First Aid Classes, and all members anxious to participate therein are requested to communicate with the Secretary, Mr. Arthur O'Connor, at the offices of the Association, 68, Fleet-street, E.C.

THE City of London Printers' Musical Society will give their fourth concert of the season at Andertons Hotel, Fleet-street, on Monday next, January 20th, in aid of the Printers' Pension, Almshouse and Orphan Corporation. A capital programme has been arranged, and Mr. Lendrum will take the chair at 7.30 prompt.

THE *Tunbridge Wells Advertiser* of Friday last showed considerable enterprise on the part of the proprietors, it having no less than a page-and-a-half of half-tone illustrations, consisting of fifty-eight full-length portraits of the children in fancy dress who attended the Children's Carnival in the Tunbridge Wells Pump Room, together with portraits of the Mayor and Mayoress. The portraits were well printed and made an excellent show. Many of the portraits were only taken on the previous day, and the care and effort necessary to secure such a good result must have been a strain on the staff of the paper who are to be congratulated on achieving such an excellent result.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

I am very glad to learn that the Manchester Bookbinders' dispute has been settled. Information comes to hand just as I am making up my week's instalment.

o o o

The employers concede an immediate advance of 2s. per week. A further increase is to be given upon settlement of working conditions and in any case after six months from present date.

o o o

It is so good to be able to record the restoration of peace that I am particularly glad to feel no obligation to offer any criticism. It may suffice to congratulate the parties upon the temper in which the controversy appears to have been handled, and perhaps to congratulate Mr. E. T. Thomlinson, Joint Secretary of the Master Printers' Association in particular. His thorough practical knowledge, attained through many years and once on a time through work-a-day experience in printing employment, and his knowledge of the habits of thought of both sides, constitute an asset of no mean value at these crises.

o o o

As to conference settlements in general, well, it's all very well to be a Nelson and to complain, as he once did, when about nine French ships had been captured, to the sad mistake his Admiral was making in talking about "our having done very well," and being disposed to let it go at that. Nelson wanted the lot.

Nelson was dealing with the enemy; and even so, it is just possible his Admiral was right; for he might conceivably have pressed a victory too far. Just as Rupert did who pursued the section of the Roundheads which he had defeated at Marston Moor, so much too far, that when he returned to the battle field he found that in his absence Cromwell had not simply beaten the other section of Cavaliers, but had won the whole field.

o o o

Even if that parallel is not exact, even if the Admiral could have taken more ships, without any such risk as Rupert ran, the question remains as to how far, within what exact definitions, the parties opposing in a trade dispute are to be called "enemies."

o o o

Their class interests are not identical to be sure; the man with only his labour to sell must sell it dearly, and the employer doesn't want to buy labour or any other commodity dearer than he need. That conflict of interest is a large part of what is called "the class war." In economic terminology the parties are economic enemies.

o o o

But we must be wary of being the slaves of phrases. While a the conflict of interest as thus set forth, is a fact, it is not the only fact germane to the matter. It is also a fact that there is a difference and a much appreciated difference between one employer and another. It is also a fact that before social or industrial developments, made us employers and employed, "great nature made us men." We have more in common than in difference.

o o o

The parties at a trade conference are not enemies, here and now, whose whole purpose is to do each other the utmost possible injury, as was naturally the purpose of the contending French and English fleets.

o o o

To say that either party in such a conference should press every point of advantage to the utmost limit, because of Nelson's reputed advice in matters of sea warfare, is to beg the whole question as to what is the exact relation in which the parties stand to each other.

o o o

While on this matter I note that Sir Albert Rollit has made his award in respect to the following question submitted to him, also at Manchester:—

o o o

"Assuming the proportion of men to machines is maintained, are (or are not) employers entitled to place one man in charge of more machines than the number stipulated in the agreement on rules dated May 6th, 1911 (page 6 machinemen's rules, Rule L 4)?"

o o o

Sir Albert Rollit answers the question in the affirmative.

o o o

I wonder if the new year will see vigorous action by some firm in the making of machines on the lines laid down by Mr. Fletcher, of Belfast. He would appear to have had the best fast flat-bed notion yet—with his four cylinders and his short stroke. I have heard the Fletcher modus spoken of with the very greatest respect by perhaps the most experienced newspaper engineer in the Metropolis.

o o o

At the same time I am inclined to make a prophecy, or perhaps two prophecies—one that the Fletcher plan will find favour with a machine maker on its high merits, and will be put on the market; the other a prophecy which may seem to run counter to the first one, but does not really do so;—namely, a prediction that we shall come soon to the day of the lighter rotary as preferable to the fast reel-fed flat-bed.

o o o

We shall soon see machines adapted to print from rotary stereos at, say, 6,000 per hour. They will be accompanied by stereo foundries also, of a less expensive kind than those we are most accustomed to. They will be meant to cast single sets of plates which will serve for the run in cases of a useful but not a large circulation.

Labour cogitations may be involved. A new condition of industry such as would be created by the incoming of the lighter and cheaper rotary into the the field, with it light stereo plant, might call for some new usage in trade unionism. In the interests of all parties—meeting perhaps around another table.

o o o

I see the *Daily Chronicle* has despatched an enquiry to Mr. Walter Hazell, among other public men. It describes him as chairman of the well-known firm of printers and as being "actively connected with social reform and philanthropic movements." That is undoubtedly true; the "active connection" has been much more than the signing of cheques or even attending boards of management. He has travelled largely, and even at a time of life when he might well have preferred his armchair or at least a leisurely strolling around his Buckinghamshire dairy farm. It seems no great while since we heard of him in Canada doing some work in connection with an Emigration Society, if my memory is correct.

o o o

The enquiry of the *Chronicle* concerns the National Insurance Act. The *apropos* was the coming of the Act into operation on January 15th. Mr. Hazell replies to the editor, "I believe the Act will be an immense boon. My firm and our employees work it without friction."

o o o

The lectures Mr. Peddie is delivering on Monday evenings at St. Bride Institute are of the very greatest interest and perhaps there is not another man living who could deliver them as he is doing. His knowledge of the books of the early printers is extraordinary, and he, of course, has all the wealth of the St. Bride collection to draw upon and wherewith to illustrate his matter.

o o o

By all means roll up in goodly muster next Monday and subsequent Monday at 7.30 and enjoy his apt and racy talk and slides, as much as the audience (including this deponent) did last Monday.

FRANK COLEBROOK.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

29,751 WADE, H., typewriting machines.
29,765 PAUL, A. V., and POLLARD, H., rotary printing machines.
29,791 ELLIOTT, R., and ELLIOTT AND CO. (OTLEY), LTD., stop-cylinder printing machines.
29,895 VICKERY, F. W., piling or laying machine.
29,907 PINCHES, H. H., reply envelopes.
29,947 R. HOE and CO., LTD., sheet-delivery mechanism.
29,980 DICKER, S. G. S., address plates.
30,087 WOLFF, M., printing ink.
30,082 STAUDE, E. G., machines for making envelopes or the like.
22 ROBINSON, H. L., device for containing, delivering, and moistening postage stamps and the like.

The Machinemen's Rules Dispute.

THERE has been another important dispute in the printing trade, affecting the whole of the country, but it has been dealt with in so sensible a manner that little has been heard of it in the outside circles of the trade until now, when the settlement is made public. The question in dispute turned on the interpretation of the Machinemen's Rules in regard to the proportion of men to be employed to machines. A difference arose last August between Messrs. Taylor, Garnett, Evans and Co., of Reddish, and the Manchester Branch of the Typographical Association, as to the interpretation of the words in the rule regulating the manning of the machines actually employed. It appears that the total number of men employed in the department concerned was in accordance with the rule, and the firm in question claimed to be at liberty, if they so required, and if the proportion of men to machines actually employed was in accordance with the first part of the rule, to place one man in charge of two two-revolution machines. The Typographical Association representatives objected that, under the rule, one man could not be required to take charge of two such machines. To appreciate the disputed point the rule should be read in its entirety. It is as follows:—

"JOBBING AND WEEKLY NEWS."

"The proportion of machinemen, including apprentices, to be one for each three platens, two single-cylinder machines, including two-revolution machines of pony size (*i.e.*, not exceeding double crown), and one for each two-revolution machine above pony size, two-colour machine, or perfecting machine. Subject to the above proportion being maintained, the house to regulate the manning of the machines to suit the requirements of the office. This proportion to be reckoned upon the number of machines actually employed."

The matter was discussed, but no agreement was arrived at, and it was referred to the Committee of Reference, a body composed of employers and members of the Typographical Association, formed some eighteen months ago, and fraught with much promise in the direction of peaceful settlements of trade disputes. This Committee met at Derby in September, to deal with the question of the machinemen's rules, but being unable to arrive at a unanimous decision, it was subsequently agreed to submit the matter to arbitration, it being referred to Sir Albert Rollit, as an arbitrator, each party agreeing to abide by his decision. That decision has now been given, as reported on another page, which in effect entitles employers to place one man in charge of more than the stipulated proportion of machines, assuming the agreed proportion of men to machines is maintained according to rule. Thus the proportion of men to machines in a printing office being otherwise correct, one man may be required, when necessary, to take charge of two two-revolution machines of any size.

* * *

Should Post Cards be Censored?

NOTWITHSTANDING the efforts of the police to suppress the sale of vulgar and indecent post cards a considerable traffic in them is carried on, and in the smaller shops in many of the side streets of London there are cards displayed that are openly indecent and sometimes of a grossly offensive character. The leading post card manufacturers have combined to stamp out the traffic to the best of their ability, but this class of card is still supplied from sources that seem to find a profit in the demand for it. Writing to the Press on this matter, the other day, Canon Rawnsley said that: "The vulgarity, semi-indecency, and blasphemous suggestiveness of many of these post cards are not only a scandal to the publishing firms, whether Continental or British, but they are a standing menace to the morality of our young people, are counteracting the efforts of our day and Sunday schools to uplift and refine the people, and are poisoning a sense of real humour at the fountain head." The Canon suggested a censorship of post cards on lines similar to that of cinematograph films, so that some restraint over the sale of improper post cards should be exercised. Sir Adolph Tuck, the head of the art publishing firm of Messrs. Raphael Tuck and Sons, expresses himself as in sympathy with Canon Rawnsley's proposal, but, he says, "this is purely a local question, and, as such, must be dealt with locally." Further, Sir Adolph said that "it was primarily a matter for the tradesmen themselves. What one did not stock the other would not, and the very fact of one dealer exhibiting objectionable cards would lead to others following suit, much as they probably disliked the idea from a personal point of view. Some sort of unity would soon eliminate the indecent picture card. Then, again, the machinery exists in every town for dealing with this kind of thing." It rested with the local authorities to take action when and where desirable in the interests of the public. Sir Adolph added that although a fair number of these post cards were imported, the majority were of British manufacture. If they were not exhibited they would not create a demand, and the question would solve itself automatically. Sir Adolph also thinks that the local police authorities are much to blame in the matter in not using the powers they already possess to deal with such publications. As to censorship, he says that a central censorship in London is not practicable, but that the idea of a local censorship is desirable from every point of view. Certain it is that some effort should be made to stop the sale of all post cards that have a degrading tendency.

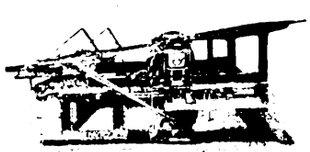
* * *

Educating the Boys.

SOME interesting matters were discussed at the Northern Educational Conference, held at

Digitized by Google

Nottingham the other day, among them being "The Educational Responsibility of the Employer." On this subject Sir William Mather said that the education given in the primary schools had not impressed employers with a very high regard for its general results. They had reason to complain of the want of aptitude and intelligence, application and interest displayed by a considerable majority of the boys and girls going to work direct from the elementary schools. The co-operation of employers and education authorities was obviously necessary. A compulsory law might possibly be enacted to enforce attendance at continuation classes, but that would probably excite much opposition and resentment. There was no influence so powerful in controlling the continuous education of youthful workers as that possessed by their employers. The employer should make it a condition incumbent on the parents as well as on the children themselves that the children must attend evening schools and take regular courses of instruction three or four times a week. He himself had had this system at work for many years with complete success. It was a rule that every boy coming to the firm at fifteen years of age—none was taken younger now—must attend evening classes three evenings a week. Each boy's record was kept. If negligent, he was warned; if incorrigible, he was discharged at any period of his apprenticeship or employment. Among the many hundreds of boys who had grown to manhood during a quarter of a century he had known none who resented these conditions, and very few who disregarded them, and, so far as he had been able to ascertain, not one had proved a discredit to his training. He commended the plan to other employers. The human factor was the greatest of all, and yet we seemed to regard its preparation and training in our industrial operations with less interest than we did the other elements. Employing printers should note these remarks as they apply equally well to the boys engaged in the printing trade, whose slipshod attainments are a source of continual worry to their foremen and employers.



THE ART REPRODUCTION CO., LTD., of 3 and 4, Plough-court, Fetter-lane, E.C., have just issued their usual catalogue of stock fashion blocks, for printers, of the spring and summer fashions for 1913. They include figures and millinery, waistcoats, boots and shoes, hosiery and sundries, umbrellas, etc., accurately designed and finely reproduced in half-tone.

"A year ago I had the privilege of studying the press-room reports of a well-known printing concern. I noticed that for 15,000 hours of press running time, they had 10,000 hours of make-ready time."

—From a Printer's Address.

If you are not a Miehle user, we suggest that you examine your job tickets and note the high proportion of time occupied in make-ready compared with the time spent in actual machining.

The Miehle reduces make-ready to the absolute minimum and raises the quality of the product. Ask users.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Jan. 15th, 1913.

THE market freed itself of its loan indebtedness last Wednesday by the payment of a large amount due at the Bank of England. The reduced supply of cash was augmented, however, by a large turnover of money in Lombard-street on Friday, and since then supplies have been ample for all requirements, though a good demand for credit has been maintained. Call loans have been obtainable at 3½ per cent. and seven-day loans at 3¾ per cent. Discount rates continue firm. Bar gold has been received at the Bank this week to an amount that nearly balances the exports, the result to date being a net influx of £19,000. With the anticipation in the middle of last week of a peaceful solution of the Balkan trouble, the tone of stock markets was good, but a growing feeling of unrest set in, culminating in the gloomiest prospects yesterday and general depression by war fears. There is a disposition to maintain a waiting attitude. Consols declined, and the quotations are now lower at 74⅞ to 75 for money, and 75 1/16 to 75 1/16 for the account.

The miscellaneous industrial market maintained its firmness last week, but dullness has since set in, though a fairly steady tone prevailed yesterday. Our list of printing, newspaper and publishing shares shows a few falls this week. Amalgamated Press Ord. are down 1/16 to 6½—6⅝; Associated Newspapers Ord. have fallen 6d. to 23s. 6d.—24s. 6d.; Eyre and Spottiswoode Deb. have given way 2 to 84—87; and Lanston Monotype Corporation have conceded 1/16 to ½—5/8. Business has been done during the past seven days in Amalgamated Press Pref. at 21s. 3d. and 21s.; in John Dickinson and Co. Deb. at acc. 100¾ and 101; in Ilford Pref. at 17s. 9d.; in Kelly's Directories Pref. at 10 3/32d.; in Edward Lloyd Pref. at 23s.; in George Newnes Pref. at 15s. 9d.xd.; in C. Arthur Pearson Pref. at 7os.; in Spicer Bros. Pref. at 9 1/16, 9 1/16 and 9¼; in *Standard* Newspapers Deb. at 83½xd.; in Raphael Tuck and Sons Ord. at 19s. 3d., 19s., 18s. 9d., 19s. and 19s. 6d.; in Waterlow and Sons Def. Ord. at 26½; in Weldons Pref. at 19s. 6d., and in the Ord. at 35s. and 33s.

DIVIDENDS AND REPORTS.

GARDEN CITY PRESS.—The Garden City Press, Ltd., at Letchworth was the first industry established at the Garden City, and in its report for 1912, which will be considered at the half-yearly meeting shortly to be held, reference is made to "our legitimate pride in the fact that we are contributing to the development of Garden City by the payment of wages to the extent of more than five thousand pounds sterling per year." The business done last year was £11,433, an increase of £2,531 on the previous year. The purchase of the original building and all payments on account of the construction of the new portions have been completed. New machinery is to be installed. The society's earnings, after paying interest on loans and writing off £374 for depreciation, were £1,904. From this were paid £202 as interest on share capital, and £1,684, this being the total value of the working members' work. About 90 employees is the average number of workers.

GEORGE ROUTLEDGE AND SONS, PUBLISHERS.—The report states that the accounts for the year show a net profit, including £274 brought forward, of £12,592. After providing for depreciation and debenture interest, the directors recommend a dividend of 7 per cent., leaving £186 to be carried forward. For 1910-11, 6 per cent. was paid, and for 1909-10, 5 per cent.

SMART SET PUBLISHING CO.—On Tuesday, in the Chancery Division, Mr. Justice Swinfen Eady confirmed the reduction of the capital of the Smart Set Publishing Co., Ltd. Counsel said the capital was £10,000, in £1 shares, and the proposal was to reduce it by writing off 10s. from each share and reducing the capital to £5,000. Capital to the extent of £5,000 had been lost, or was unrepreesnted by available assets.

COMPANY FINANCE.

GENTLEWOMAN, Ltd. (and Reduced).

The reduction of the capital of this company from £160,000 to £120,000 having been sanctioned by the Court, the following particulars have been registered by the Registrar of Joint Stock Companies:—"The capital of the 'Gentlewoman,' Ltd. and Reduced, is henceforth £120,000, divided into 80,000 five per cent. cumulative preference shares of £1 each, and 80,000 ordinary shares of 10s. each, instead of the original capital of £160,000, divided into 80,000 five per cent. cumulative preference shares of £1 each, and 80,000 ordinary shares of £1 each. At the time of the registration of this minute the whole of the said preference and ordinary shares have been issued, and the sum of £1 per share has been or is to be deemed to be paid up on each of the said preference shares, and the sum of 10s. per share has been and is to be deemed to be paid up on each of the said ordinary shares."

THE PRESS PRINTERS, Ltd. (and Reduced).

This capital of this company has been reduced from £35,000 to £13,750, as approved by the Court, and following particulars have been registered:—"The capital of the Press Printers, Ltd., and Reduced, is henceforth £13,750, divided into 26,500 cumulative preference shares of 10s. each, and 10,000 ordinary shares of 1s. each, instead of the original capital of £35,000, divided into 25,000 cumulative preference shares of £1 each, and 10,000 ordinary shares of £1 each. At the time of the registration of this minute 23,500 of the said cumulative preference shares numbered 10,001 to 33,500, and the whole of the said 10,000 ordinary shares of 1s. each have been issued, and are or are to be deemed fully paid. The remaining 3,000 cumulative preference shares are unissued and nothing has been or is to be deemed paid up in respect thereof."

COMPANY NOTICES.

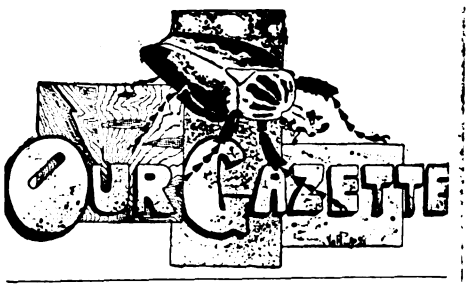
NORTH AND SOUTH WALES NEWSPAPER CO., Limited.

At meetings of the company, held on December 16th, 1912, and January 6th, 1913, the subjoined resolution was passed and confirmed:—"That this company be wound up voluntarily, and that Mr. Richard Hughes, of Ynystowyn, Portmadoc, be appointed liquidator for the purposes of such winding-up."

CARLTON PRESS (CHESHAM), Ltd.

Notice is given, that a meeting of the company be held at London, on February 17th, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

CANADIAN TIMES PUBLISHING CO., Ltd.



Notice is given, that a meeting of the creditors of the *Canadian Times* Publishing Co., Ltd. (in Voluntary Liquidation), will be held at 6, Rood-lane, E.C., on the 20th inst., for the purposes defined in the Companies Act.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

SCOTTER and LAW, 1, Belgrave-mansions, Grosvenor-gardens, London, S.W., newsagents, booksellers, stationers and librarians. Debts by J. H. Scotter, who will in future carry on the business. September 30th, 1912.

DISTRIBUTION OF ASSETS.

ASHDOWN, E., late of 91A, King Henry's-road, Hampstead, London, N.W., retired music publisher. Claims by February 10th, to A. W. Crump and Son. 17, Leadenhall-street, E.C., solicitors for the executors.

LAW, R. C., late of 79, Kenwood-road, Stretford, and 2, Gloucester-street, Manchester, lithographer. Claims by February 11th, to Linnell and Linnell, 4, Clarence-street, Manchester, solicitors for the executors.

THE BANKRUPTCY ACTS, 1883 AND 1890.

NOTICES OF INTENDED DIVIDENDS.

CHALFONT, W. W., and GRIGGS, H. J., trading as W. W. Chalfont, 34, Union-street, Marylebone, London, W., printers and stationers. Claims by January 24th, to G. M. White, 14, Old Jewry-chambers, E.C.

DOLBY, G. F., Uppingham, Rutlandshire, bookseller and stationer. Claims by January 25th, to E. Barlow, official receiver, 1, Berridge-street, Leicester.

ORDERS MADE ON APPLICATIONS FOR DEBTORS' DISCHARGE.

BENNETT, J. H., trading as Bennett and Co., 8, Henrietta-street, Covent-garden, London, W.C., publisher. Date of order, December 18th. Discharge suspended for three years from December 11th. The grounds named in the order for refusing an absolute order of discharge were that the bankrupt's assets are not of a value equal to 10s. in the pound on the amount of his unsecured liabilities; and that he had been guilty of misconduct in having in December, 1911, when insolvent and with a view of defeating the petitioning creditor's claim, disposed of practically all his realisable assets.

DAVIES, J. Wigan-road, Hindley, near Wigan, stationer and printer. Date of order, December 10th. Discharge granted subject to bankrupt consenting to judgment being entered against him for the sum of £1, this amount being paid to the official receiver on January 9th. The grounds named in the order for refusing an absolute order of discharge were proof of fact mentioned in sec. 8, sub-sec. 3 (B), Bankruptcy Act, 1890.

MR. A. CHRIS. FOWLER, 6, New Union-street and Tenter-street, Moorfields, E.C., sends out an effective calendar for 1913 which bears a capital specimen of his art printing of botanical subjects, a branch of work for which he has a high reputation. The business announcement appears across the top of a broad oblong card, below being the coloured reproduction of an orchid side by side with a large monthly tear-off calendar printed in red on primrose paper.

IN 1912, 237 cwts. of stationery valued at £658 was imported into Bunder Abbas, compared with 350 cwts. in 1911, valued at £1,186, and 252 cwts. at £505 in 1910.

Leeds Lithographers' Dinner.

At the dinner of the Amalgamated Society of Lithographic Artists, Designers, Engravers and Process Workers, held at the Griffin Hotel, Leeds, the Vice-Chancellor of Leeds University (Mr. M. E. Sadler) proposed, along with Mr. J. Preston, the toast of "The Disciples of Senefelder and other Pioneers of the Reproductive Arts." The Vice-Chancellor referred to the important educational developments which had been brought about by the Leeds Education Committee for the furtherance of the interests of the lithographic and process industries. Mr. Sadler said that the plan for the provision of technical and artistic instruction for lithographers and process workers would bring, he hoped, material benefit to one of the most important trades of Leeds and district. From first to last there had been complete harmony of effort and aim among those representing the City Education Authority, the printing trades, and the University. With an alliance of this kind anything was possible in the way of educational development. Further, Mr. Sadler alluded to the decision of the Leeds City Art Gallery Committee to hold next month an exhibition of colour printing. He said that this exhibition, which would open on February 15th, would be perhaps the most important of its kind ever held. In the organisation of the exhibition, the Art Gallery Committee had had the benefit of the expert help of Mr. Frank Rutter and Mr. Bottomley. They had also received material help from the printing trades of Leeds, and from the chief colour printers of Germany and Switzerland. Some features of the exhibition would be entirely new, and would probably bring to Leeds students of the subject from all parts of the country and from abroad.

"Cellon-Blocks" Printing Surfaces.

An interesting, and at the same time most useful, invention has been made by Mr. J. Richter, of Geneva, which threatens to compete with the present system of stereotyping. By his method the inventor claims many advantages which call for consideration. Infinitely more depth can be obtained from process blocks, thereby bringing the risk of bad printing, whether from flat-bed or rotary machines, to a minimum. Continental newspapers which are using the new Cellon-Blocks show a surprising improvement in their illustrations since adopting this new method of stereotyping.

The cost of Cellon-Blocks is low, and being made of a very hard and durable composition, they can also be handled easier as they are as light almost as a sheet of paper, consequently enabling large quantities to go through the post at a small cost. They are also non-inflammable and are insensitive to any friction whilst in use. Any inquiries from our readers will be forwarded to the proper quarter.

ADMIRAL LORD FISHER was a witness in a case opened last week at the Tower Bridge Police-court, and complained of the manner in which his name had been used, and also that of his colleagues on the Royal Commission enquiring into the fuel supply of the British Navy. The case was the prosecution of the Leadenhall Press, Ltd., and other defendants, for printing, publishing, circulating and distributing certain pamphlets and documents without an imprint. Counsel for the defendants apologised to Lord Fisher for any annoyance that might have been caused, and the hearing was adjourned.

MR. G. B. HODGSON, South Shields, presided at the annual meeting of the Northern District Newspaper Press Fund, which was held in the Library of the *Chronicle* Office, Newcastle-on-Tyne, on Saturday. The annual report showed that the past year had been a very successful one, and that the Northern District was the fourth largest, as regards numbers, in the provinces. The district committee was elected as follows:—Mr. G. B. Hodgson (*Shield's Gazette*), Mr. R. W. Johnson (*Journal*), Mr. E. T. Hawkes (*North Mail*), F. W. Betty (Sunderland), Mr. F. R. B. Cassels (Darlington), Mr. W. Isherwood (W. Hartlepool), Mr. N. Newton (Stockton), and Mr. R. N. Burgess (Carlisle).

A Claim for Wages.

Before Mr. Registrar Wild, in the City of London Court, on Friday, a claim was made by Miss Rosaline Maher, 22, Ronar-road, Barnsbury, until recently forewoman of the folding department of Morgan Reeve Co., Ltd., printers, 22, Garlick-hill, against whom she now made a claim for 18s., a week's wages, in lieu of notice. The plaintiff said she was first employed by the defendants as a piece worker. Upon the works manager leaving in November she (plaintiff) was appointed forewoman of the folding department on November 2nd, at a salary of 18s. a week. She was dismissed peremptorily on November 29th without any reason being given, and she now made her claim for a week's wages. Mrs. Desmond said she had been employed by the plaintiff in the folding department of the defendants. She had never seen any notice such as the one now shown her until after the plaintiff had been dismissed. Then the new forewoman came to her and showed her the notice. What was done with it afterwards she did not know. The defence was that by reason of notices which were placed in every room of the defendants' establishment the plaintiff was not entitled to receive or required to give notice to leave. John Samuel Milligan, secretary of the defendant company, spoke to fixing up the notice in question in the room which had been controlled by the plaintiff. They had moved their folding department from Garlick-hill to 1, Sugar Loaf-court in November, and when they moved the new forewoman who took the plaintiff's place took over the notice with her and drew the attention of the workers to it. In answer to the Registrar, the witness said he hung the notice on the door of the room where the plaintiff had worked. Windsor, also in the employment of the defendants, gave evidence that the notice was hung in the room in question. In answer to the registrar, the witness said there was no door to the room. The door referred to by the previous witness he supposed was one that led to the lavatory. The Registrar said that the defendants were trying to force a special contract upon the plaintiff, but the evidence supporting it was very unsatisfactory. Such a notice as that now relied upon must be clearly shown to the person employed so as to give notice that the ordinary law did not apply, otherwise the servant was entitled to expect a week's notice. He was not satisfied that the defendants had done that, and there would be judgment for the plaintiff for the amount claimed, with costs for herself and witness.

A Staff Dinner.

A complimentary dinner to the staff of Messrs. Morton and Burt, Ltd., printers, 187, Edgware-road, 126, High-road, Willesden, and of Messrs. Burt and Sons, 38, Porchester-road, was given the other evening, at the Norfolk-square Hotel, under the chairmanship of Mr. J. R. Burt. It was a most agreeable social function, and fittingly synchronised with the 40th anniversary of the connection of Mr. C. W. Burt (whose absence through indifferent health was much regretted) with this most successful firm of printers. The assembled company numbered over a hundred. A striking feature of this pleasant affair was the manifestation of cordial and harmonious relations between all the members of the firm and their staff, which is a most gratifying industrial phenomenon, reflecting equal credit on employers and employed.

A good dinner having been well served, the postprandial proceedings were full of animation. The toasts were proposed in admirable speeches, marked by point and pith, and at times by sparkling humour. The speech-making was interspersed with music, carried out under the capable direction of Mr. A. H. K. Burt.

The musical programme was one of the best, some noted artistes having been engaged, including Miss Dora Clayton, "Songs at the piano"; Miss Hettie Stammer, soprano; Mr. Wilson James, a comedian standing alone in his own sphere, Mr. Ben Lawes, humorist; Mr. Lorne Wallet, Scottish baritone, and Mr. Sydney Warwick, accompanist, who also sang with fine effect.

A noteworthy event towards the close of the evening was the presentation of books, awarded by the firm as a mark of appreciation to three apprentices who had distinguished themselves in examinations in the printing art at the Polytechnic and City of London Guilds. The presentation was made by Mrs. J. R. Burt to Llewellyn Jones (son of Mr. Emlyn Jones), whom the Chairman described as the worthy son of a worthy father—(cheers)—Walter R. Dodd, and Robt. A. Robson. The toast of "The King" having been submitted from the chair and duly honoured, the Chairman, in the name of the firm, gave a hearty welcome to all.

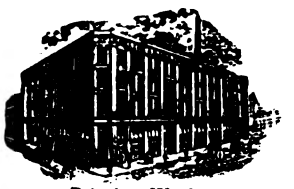
Mr. R. F. Brown, a member of the staff, proposed "The Health of the Chairman," which was enthusiastically pledged with musical honours.

Mr. J. R. Burt in acknowledging the compliment, remarked, that, of course, the cordial sentiments expressed were intended for the chairman of the firm. He read a telegram from Mr. C. W. Burt, as follows:—

"I wish you all a very enjoyable evening. Regret not being present. May 1913 bring much happiness and success to all."

Forty years, he said, was a very long record. It was a record of strenuous work and one in which Mr. Burt had not spared himself. Speaking of labour unrest, Mr. Burt offered some sound advice to the staff and spoke of the cordial relations which had always existed between their chairman and those employed by him—he had always acted on the principle that a man was worth all he could earn. Sometimes he wished they could get back to those days, for though he honoured those who denied themselves for the sake of their fellows he could not agree with present-day labour conditions which often seemed to sacrifice ability for the benefit of the undeserving. He was glad to state that he could point out many there who delighted to show what modern men and modern machines could do. He referred to the merit exhibited by some of the juniors on this staff, and called upon Mrs. Burt to make the presentations mentioned above.

Mr. F. Scott Mitchell proposed a final toast of "The Firm," which he described as having been omitted from an excellent programme. After being heartily received and acknowledged, a very enjoyable evening ended with the singing of "God Save the King."



PRINTING PLANT SEIZED.—A series of alleged frauds on the Post Office Savings Bank lately, in which larger sums have been withdrawn than the total deposits the depositor was entitled to, led to the recent arrest, at Chiswick, of a man named George Gibbs, who last week was charged at Bow-street with forgery with intent to defraud. As an outcome of the arrest a raid was made by Metropolitan police officers and Post Office officials, with the co-operation of the local police, on a public house in Maidenhead, where, in a room rented by a man, was found a complete printing plant, including a form containing type set to reproduce a Post Office Savings Bank withdrawal form, several prints from this, and special ink, alleged to have been used in connection with the above frauds. The prisoner was remanded.

THE commercial value of good taste, to buyers of printing, is marked by the rising demand for advertising managers, keen in their sense of appropriateness and expert in their knowledge of the harmonies of subject-matter with paper, type, form and colour.

¶ Of two catalogues, the same in purpose, but differing in quality, the one built on the laws of good taste will win by a margin big and decisive. Tests have proved this—and the truth of it is spreading.

¶ With this recognition has come an insistent call for men of good taste, and with the vision of its possibilities, who can plan, lay out, and put through the printing campaigns of high-grade houses.

¶ To such houses and to such men *The Graphic Arts* comes as a magazine full of suggestions, and educational features that stimulate good taste in all the factors that make for good printing.

¶ Send 30 cents for a sample copy.

FALCON WORKS, OTLEY, ENGLAND.

Throw the Stereo Rotary on the Scrap Heap

Turin, 1911. Grand Prix.

A PRESS FOR EDITIONS UNDER 12,000.

The Cost of Stereotyping of a Newspaper of Medium Circulation amounts to about £250 a year.

This sum is saved annually by the

SWISS-DUPLEX,

which delivers direct from type forms 5,500 to 6,000 complete copies per hour of 4, 6, or 8 pages, printed, pasted, folded, and counted, without stereotyping. Our Swiss-Duplex Type 1910 is a considerable improvement on every other system, and is guaranteed to yield faultless work on any printing paper, equally as well as any other Rotary. The new path of web avoids splitting and makes possible accurate register. The SWISS-DUPLEX has stood the test of 20 years' service, and is the most useful and practical Flat-Bed Rotary in the World. The smart publishers have printed medium sized editions for years on the SWISS-DUPLEX, and have discarded the Stereo Rotary, consigning it to the lumber room.

Any printing press engineer is able to fit up the machine. Detailed plans of erection and hints to pressmen are supplied.

Quick Delivery. Easy Terms. Send for Prospectus, Testimonials and Price.

The British and Colonial

Printer and Stationer.

BOOKBINDING SUPPLEMENT.

No. 27. LONDON: JANUARY 16, 1913. Issued Monthly, with the British and Colonial Printer and Stationer.

Bookbinding Notes and News.

For some time past we have handled H. E. Cornwall's useful little book on "Bookbinders' Estimating, Hints, Recipes, etc.," and we have now received from the same author an equally useful booklet (5 by 3¼ inches) entitled "Practical Estimating for Printers, Bookbinders, Rulers, etc." Some practical hints on the work of estimating are first given, and these are followed by prices for various kinds of work and by tabular matter. The following are the main headings of the work for which prices are given: Stereotyping and electrotyping; table of machining charges; binding operations; miscellaneous costs; litho; binding price list (letterpress); machine ruling; trade price list of account bookbinding, up to six quires; piece work prices for making-up, sewing, numbering, etc.; and relief stamping. The tabular matter is as follows: Number of words per square inch of type; sizes of note papers; sizes of printing and cartridge papers; equivalent weights of printing papers; equivalent weights of writing papers; and sizes of cards. The preface states that the book has been "written more especially for the benefit of those desirous of obtaining a *useful* knowledge of estimating," and it provides such information in a handy and concise form. With regard to the prices of various kinds of work, however, there will always be differences between the charges of one house and those of another; therefore it would not be desirable to accept as absolute all the prices given in this or any other book on estimating. For certain kinds of work we have compared the prices in the booklet under notice with those given in J. Leonard Monk's "Guide to Handling and Pricing of Account and Letterpress Books," and we have not always found agreement; in some cases Cornwall's prices are higher than those of Monk, and in others lower. However, as a basis for obtaining a closely approximate estimate such books as these are invaluable. The utility of the booklet under notice has been increased by interleaving, so that special costs can be added, and thus made readily accessible when required.

As the author invites suggestions, we suggest that in a future edition prices might be included for collating, hand-sewing, cutting, mounting maps and plans on linen, guarding plates and casing books. As the difference between the price of common bookbinders' cloth and the best qualities is nearly 1s. per yard, the quality of cloth should be stated in connection with the prices, and it should also be stated whether or not the leathers conform to the specifications of the Royal Society of Arts. There are many pitfalls in the work of estimating, and some of them, at any rate, would be avoided if Cornwall's "Practical Estimating" were made a constant companion. Copies may be obtained from the publishers of this journal, Stonhill and Gillis, 56, Shoe-lane, London, E.C., price 2s. net, or by post 2s. 1d.

No official settlement has yet been arrived at in the Manchester bookbinders' strike, and according to the latest advices received, a number of men are still out. The employers' final offer, made just before the strike, included an immediate and unconditional advance of 1s. 6d. per week, and a further 1s. 6d. on coming to an agreement with the National Union of Bookbinders with regard to various points, including female labour, which is one of the principal matters in dispute. At present the Union allows women to do folding, sewing, paging and perforating, but generally objects to their employment in other branches of binding. Further, it declines to allow the introduction of time notes for the purpose of obtaining cost of production, or to permit a man to have charge of more than one disc ruling machine. As these latter are chiefly engaged on common run-through work, and have automatic feeding attachments, the employers claim that one man can easily look after two machines. Large quantities of cheap work are said to be leaving Manchester owing to the action of the Union, as the houses are unable to compete with other centres, where the conditions recognised by the Union are more favourable to the employers. However, the N.U.B.M.R. stated just before Christmas that not more than 100 of their men were still out, the employers of the other 300 or so having granted the 3s. rise asked for, unconditionally.

The binders and rulers at Hull having recently made application for an advance of wages, the Master Printers' Association considered the matter in general meeting, and passed the following resolution:—"That the members of the Hull Master Printers' and Allied Trades Association, assembled in general meeting, after careful consideration of the reasons in favour of an increase in the minimum standard rate of wages of bookbinders and machine rulers, put before their Sub-Committee on November 15th, 1912, by the deputation from the Hull branch of the National Union of Bookbinders and Machine Rulers, regret that, at the present time, they cannot see their way to grant any increase whatever; but, although the recent reductions in working hours and other circumstances have compelled them to come to this decision, we recognise that our workpeople deserve every consideration it is in our power to grant them, and, if the present demand is unreservedly withdrawn, we offer to increase the minimum standard rate of wages of 32s. per week, now paid to compositors, letterpress machine minders, bookbinders and machine rulers, to 33s., on the first Monday in May, 1913." This was communicated to the men, and, in due course, accepted by them.

Employment in the Bookbinding Trades was good generally during November, and better than in the previous month. In London, however, notwithstanding that some overtime was worked, a slight decline was still shown as compared with a year ago, the percentage of unemployed (1·8 out of 3,418 Trade Unionists) being higher than the 1·5 of November, 1911, though lower than the 2.5 recorded in October. In the Provinces, the percentage was 2·1 out of 3,074, as compared with 2·7 in October, and 1·9 in November, 1911. In Dublin, employment continued slack. With fancy leather workers it was fair generally, rather worse than a month ago, but about the same as a year ago.

Amongst the contracts placed by H.M. Stationery Office, during November, were the following:—Binding, 1,750 "Instructions relating to Naval Courts"; 5,000 "Sun's True Bearing"; 5,000 "Ship Captain's Medical Guide"; 10,000 "Board of Agriculture, etc., Leaflets."—Dickens and Cooper, Ltd., 6, Newcourt, Farringdon-street, E.C. Binding 1,500 Instructions relating to Cycles; 900 Instructions to Registrars of British Ships; 15,000 Regulations for Recruiting, 1912. J. Adams, 76-78, Gray's Inn-road, W.C. Binding, etc., 3,300 Memo. Books; 600 Guard Books; 800 Books, No. 145; printing, binding, etc., 5,000 "England No. 2 Receipt Book"; printing and binding 1,200 Non-Money Order Sub-Office Cash Books; printing and binding 5,000 Linemen's Diary; supplying 5,000 Covers for Army Orders; 2,800 Spring Portfolios; 7,500 Portfolios, 16-in. by 10-in. by 3-in.; 12,000 Millboards.—Waterlow and Sons, Ltd., Finsbury, E.C. Binding, etc., 600 Memo. Books; printing, binding, etc., 9,000 Books, "S. 323"; 1,000 Note Books "D."; 10,000 Books, Mines and Quarries, Form 42a; supplying 7,000 Millboards.—Drake, Driver and Leaver, Ltd., Rosebery-avenue, E.C. Binding etc., 500 Fortification Drawing Books; 8,000 Ciphering Books; 3,000 Note Books; printing, binding, etc., 1,000 Note Books "C."; 2,500 Re-direction Books; 1,000 Maintenance Exchange Requisition; 1,000 Books "No. 115"; 2,000 Books "No. 114"; 2,000 Rotation Books, No. 234; 5,000 Books S. 353 Engine Room Register; 1,000 Delivery Receipt Books; 1,500 Books "London No. 8"; 10,000 Books, Mines and Quarries Form 45; 10,000 Books Mines and Quarries, Form 52; 1,000 Books Mines and Quarries, Form 15d.—McCorquodale and Co., Wolverton, Bucks.

The West Ham Town Council invite tenders for executing the bookbinding required in connection with the public libraries and technical institute. Particulars may be had at the Cental Public Library, Waterlane, Stratford, E., or the Central Public Library in Barking-road, Canning Town. Tenders must be delivered at the Town Hall by the 24th inst. The usual wages clause has to be observed.

Messrs. G. Cornwall and Sons, of Castle-street, have secured the bookbinding contract for the Aberdeen Town Council, the total being £289 13s. 6d.

The imports of Book Cloth during December amounted to 29,100 yards, value £704, against 24,175 yards, value £593, in the same month of 1911, and 14,447 yards, value £532, in December, 1910.

Under the heading of "The Last Work of a Famous Binder," the *Pall Mall Gazette* for December 30th had an illustration of the doublure of a copy of Lockhart's "Spanish Ballads," which was the last volume bound by the late Mr. F. Sangorski. According to the *Pall Mall Gazette*, it afforded Mr. Sangorski occasion for blending the Moresque and Spanish styles in his design. The cover itself contains over two hundred precious stones, including fourteen diamonds, over seventy topazes, forty turquoises, and a dozen sapphires; but these are merely subservient, of course, to the elegant arabesques and panelling. And it is in the blending of rich colour, intricate line-work, and concentrated ornament that the distinction and originality of the design stand manifest. The fly-leaves are of white levant, with inlay and gold "tooling," while the outer binding is of mauve-coloured levant, still more elaborately incised with gold and inlay. The extent of the work may be further judged by the fact that the six pages (*i.e.*, doublures, fly-leaves and covers) contain over 2,500 inlays in various colours, and that it took over two years to complete. Needless, perhaps, to add that this example of fine binding has found its way to America.

The students of the Bookbinding Class at the Central School of Arts held a social evening at the Ashburton Rooms, Red Lion-square, on the 11th inst. Some 50 students of the class (past and present) attended, and after an enjoyable tea, formed an appreciative audience to a programme of songs and music contributed by Messrs. Croker, Dixon, Freeman, A. Gaiger, Lipman, P. McLeish, C. Leish, Morrell, Toseland, Welch and Zimmer.

A well-known member of the bookbinding world, Mr. Ireland, was present as a visitor,

Digitized by Google

and helped by his "finished" performance to "forward" a very merry evening. Mr. Glanvill, at the piano, rendered "first aid," and Mr. de Sauty was in the chair.

The copy of Queen Mary's Psalter, presented to the Queen by the Trustees of the British Museum, and specially bound by Miss Katharine Adams, a member of the Arts and Crafts Exhibition Society, has been lent for exhibition to that Society, and is now on view in their exhibition at the Grosvenor Gallery, New Bond-street.

The January issue of the *Librarian* contains an article on "Small Libraries and Small Incomes," by Mr. E. Wood, Co-Librarian of Southport. It includes the following reference to binding:—"A very considerable saving is effected each year by fitting up a small repairing room. An initial expenditure of a £10 note, and an enthusiastic staff, can considerably reduce the binding account. The stock can also be kept in much smarter trim, and all sorts of things of use in the library can be made, such as blotting pads, card issue guides, etc. One of the most useful tools to purchase is a substantial table cutter for paper, card, and cloth. The ordinary ones sold for cutting photographic prints are not strong enough. Good and substantial tools are an immense step on the way of turning out business-like work."

The Museum of Decorative Arts at Paris has just acquired a very fine collection of ancient bindings by legacy from the Comte de Rambuteau.

The Brussels School of Bookbinding has decided to participate in the International Exhibition to be held at Ghent this year; the examples of binding shown will consist of work executed during the current scholastic term. The number of pupils attending the classes at the school is now about a hundred.

Employment in the German bookbinding trade improved during October, with the result that the percentage of unemployed Trade Unionists in that line, out of a total of 33,196, fell from 2·3 (in September) to 1·8, which is much better than the 2·5 recorded in October, 1911.

A National Exhibition will be held at Berne from May to October, 1914. Bookbinding will be among the industries represented.

At Victoria, British Columbia, a new wages scale of £5 per week in all branches of the bookbinding trade came into force at the commencement of this month. Previously only the head ruler, finisher or forwarder got this, the others getting £4 7s. 6d., but in future all grades are to be paid the higher rate. Business is good, there being no unemployment in the trade at present.

Mr. Robert Glockling, President and general organiser of the International Brotherhood of Bookbinders, is seriously ill at his home at Indianopolis, U.S.A., and not expected to recover. He is now confined to the his and unable to help himself to sit up, but while his physical strength is all gone his mind is as active as ever, and he insists upon knowing all the work of the Brotherhood and receiving all letters addressed to him. He dictates letters from his bed and decides questions that are constantly arising, and in this way he is taking as active a part in the work as he ever did. It is suggested that the Brotherhood raise a sufficient sum to maintain the President's wife and two children in the event of his early demise, as his illness has swallowed up all his means.

The female members of the Brotherhood will pay 10d. per month in future, starting this month, in place of the old rate of 7d. The Union's New Year's advice to its members includes the following: "To pay dues and other financial obligations promptly, to attend meetings regularly and to take an interest in all affairs that come up, to purchase only union-made goods from union clerks, to endeavour to secure to membership the nonunion bookbinder and have the delinquent pay up and return to the fold; and last, but not least, boom the bookbinders' union label."

In our Bookbinding Number of June last year we gave some details and illustrations of the bindery at Messrs. Ginn and Co.'s Athenæum Press, Cambridge, U.S.A., where some 400 hands are employed. Hitherto this has been an "open shop," but on November 20th last an agreement was made between the firm and the Boston Printing and Allied Trades Council, according to which only Union men are to be employed during the next two years, at any rate, except in cases where they are not obtainable. The inclusion of this great house in the Union ranks is regarded as a decided triumph. There has been no general local advance in bookbinders wages for about a quarter of a century, notwithstanding the increased cost of living, but with the new state of things an improved wage scale has been put into force in the Athenæum Bindery, which other large local firms are expected shortly to adopt.

The Chicago Union rulers have succeeded in getting their minimum weekly wage raised to £4 10s. per week. They gave their employers four days' grace before striking, and the strike only lasted twenty-four hours, the employers giving in unconditionally at the end of that time. They, however, accuse the Rulers' Union of breaking an agreement to maintain the old scale pending negotiations for a new one.

Pittsburgh (Pa.) is one of the few cities in the United States where an eight-hours day is not in force amongst bookbinders. A strike to enforce its observance there is just now in progress. Hitherto the working week has consisted of 54 hours, and the strike is for 48 hours, the circular to the employers by the Paper Rulers' Club being as under:—

"This is to advise you that we shall on and after Monday, December 2nd, 1912, consider only this proposition:—

"That salary remain the same as now in force. All time over forty-eight hours be considered as overtime, and time and one-half shall be paid, and double time for Sundays and holidays. The week's work shall consist of forty-eight hours, divided into five days, as follows: Monday, Tuesday, Wednesday and Thursday, start at 7.30 to 12; 12.30 to 5.35. Friday start at 7.30 to 12, and 12.30 to 5.40. And a holiday on Saturday.

"No other propositions will be considered, and we trust you will find it convenient and satisfactory to accede to our demands."

The employers offered a 51-hours week, but the suggestion was not entertained by the men.

In a recent number of the New York *Tribune* there were some revelations about the methods of the American "faker" of *de luxe* editions of standard works. Some years ago, it is stated, certain unscrupulous publishers were in the habit of making up a large number of sets of cheap books, to be sold at about $50 a set, which was usually much more than they were worth. To get a ready market for these books, they would bind up two or

three sets in a showy manner and exhibit them to prospective customers, with the statement that they were "$5,000 sets," but that a special lot of books, exactly like them, only in cheaper binding, had been made up to sell for $50 a set as a special favour to the book-loving public. One day it dawned on a bright young salesman that the "$5,000 set" could be sold, and that young man became the father of the fake de luxe edition game. He bought the unbound sheets of some good edition of a popular author's works from a reputable publisher. An artist, hired for $25 or $30 a week, then painted illustrations, usually water colours, which were inserted between the leaves. The whole thing was then bound by a jobber in leather closely resembling hand-tooled work, but in reality stamped by machinery. These books cost the manipulator about $4 a volume, and were unloaded by him on ignorant collectors at about a hundred times that amount.

A writer in an American contemporary says that printing before ruling can be done on the ordinary run of work, especially large runs, but on small runs and small size sheets ruling first is preferable. If a job can be ruled right, ten or twelve to the sheet, and it is deemed expedient to print it two, three or four on, it would be preferable to rule before printing. There can be no fixed rule for this, as it depends upon the character of the work and the inter-division co-operation spirit should take into consideration the cheapest and best way to complete the work. If an extra hour spent in the composing-room saves two or three in other divisions; or if by spending an extra hour in the press-room three, four or five hours can be saved in the bindery, it ought to be done. Lack of binding knowledge is responsible for many improper make-ups in the composing-room, causing waste of time and material.

Are Technical Classes Useful?

SIR,—This question comes before one after reading the last Bookbinding Supplement of the *British and Colonial Printer and Stationer*, with the examiner's report on the work of the students who entered for the City and Guilds of London Institute examinations. Each year Mr. Douglas Cockerell, the examiner, has made strong comments on the poor quality of the work done in the practical part of these examinations, and this year his opinion is very much more strongly put, as he remarks that the work done is the poorest he has ever seen. The test set students entering for the above examinations is not what one would call by any means severe, or above the capability of an apprentice, at any rate the ordinary examination, and why there should be so many failures is almost unaccountable. The various schools throughout the country seem by all accounts to be well equipped for the part they have to play in imparting knowledge to their respective students, and the teachers, several of whom are personally known to the writer, are really capable men, well qualified for their positions, and who should be able to impart a good idea of their craft to the students passing through their hands. A visit to a class also gives one the idea that the students are acquiring a good knowledge of the trade, and the work shown to a visitor usually succeeds in sending him away with the notion that the students are doing extremely well, and making a good return for the care and pains the teacher expends on them. But now comes the end of the session, and with it the London examinations; a simple practical test is given the students, the only difference from an ordinary class night being that they are left to their own resources, no teacher being allowed to be present while the examination goes on. Nervousness may have something to do with the very poor attempt some students make, but when you read that one very prominent school, where both teachers were workers of the very highest class, only obtained 4 passes out of 19 students, something really seems to be wrong. My own opinion is very strongly against such examinations held by outside bodies, and I consider that the students would be much more fairly examined if the work each had done in their own class-room, during the session, was taken as the basis of their examination. At the present time, when technical classes are being brought more and more before the public, and when everything possible is being done to improve the training of apprentices, results such as the above make one pause, and wonder whether the energy expended by the educational authorities, and the enthusiasm displayed in the organising of classes in trade subjects, is really worth all the trouble, and if the results of examinations only are taken I am afraid it must be considered a great waste of time. But there is a bright side, which all those in touch with the classes fully appreciate, and that is the real improvement which each session brings in tne students' work, and also when one sees lads who have passed through the schools occupying leading positions as craftsmen in the various shops. Another point, in many shops the practice is to offer lads, when their apprenticeship is finished, a situation as improvers, at a good few shillings less than the standard. In many cases I have found that lads who have passed successfully through a school receive the standard wage at once, and are not asked to pass through any improver stage. And then again, a love for our craft is created in very many students, which is all for their good, as it takes away the feeling that their daily work is so much drudgery and is only useful in that it brings pay-day.

Love sweetens labour, and a love of our daily work makes life much brighter and our whole career more than a mere existence. Discouraging results crop up, but must not be made too much of, as the good done is far greater than the results of any examination would lead the casual reader to suppose, and the trade classes throughout the country are helping greatly in the formation of character and the creating of a class of workmen whose influence in this world will all be for good.

Yours truly,
ANDREW CURRIE.

American v. English Bookbinders.

Suggested Increased American Duty on Bound Books.

It is generally understood that after the inauguration of the new President of the U.S.A., Dr. Woodrow Wilson, a special session of Congress will be called to revise the present import Tariff. A writer in the *International Bookbinder* thinks that the existing duty on imported bound books stands much in need of revision in the interest of the American bookbinding industry. Says he, our trade has suffered from past reductions of the tariff, and it is impossible for the American publisher and bookbinder to pay our present schedule of wages and compete with the cheap labour of England, Germany and other countries. Now what should we do to prevent the attack on our industry and trade? Send in a protest against any reduction on bound books, and request an increase of duty to 50 per cent., and the insertion of the word "bound" in paragraph 517 in the free list, so that the paragraph will read, "Books bound or unbound which shall have been printed (and bound) more than twenty years admitted free of duty." If we could succeed in having that one word "bound" inserted in the new tariff bill in paragraph 517, it would give to the binders of this country thousands and thousands of dollars' worth of work, and it would prevent Mr. Cedric Chivers, of Bath, England, from gathering the thousands of library books

throughout the New England and Middle States and sending them across the pond to his English bindery, where the scale of wages is about thirty-two shillings a week.

Several years ago we had in New York a flourishing union. The members were all extra workers, highly skilled forwarders and finishers; their scale of wages was above the rate of the average forwarder and finisher, but it was not too high considering the skilled and artistic work they were to do. Several binderies were kept busy binding books of noted authors for millionaires and connoisseurs, who take great pride in collecting a library of artistically bound books. To-day very few binderies are engaged in that work, and the high-class forwarders and finishers of the old Union are now employed in the edition binderies, and some are not employed at all. Several big binderies in England are kept busy all the year round doing the work that should be done by our skilled craftsmen in this country.

On Some Early Italian Book Covers.

In the November number of *Il Risorgimento Grafico* (Milan), Sig. G. Guido Giannini continues his interesting series of articles on the work of the ancient binders of Italy, the first of which was briefly summarised in our Bookbinding Supplement a couple of months since. In that first article the writer dealt with the type of Italian binding current mainly at the end of the 15th and beginning of the 16th century, which owed much of its decorative detail to the influence of Persian, Arabic, and other Oriental work. In the second article Sig. Giannini proceeds to deal with "Original Italian Binding," *i.e.*, those types which were indigenous to the country, and owed nothing to external influence. They took their rise very simply, he says, the sole intention of their creators being to protect the leaves of the book, without any pretensions to art or elegance, though as time went on the covers were gradually transformed into works that exhibited patience and good taste. Amongst them, two special types of book covers distinguished for some centuries the art of the Italian book maker. These were the product respectively of Siena—wooden covers, carved and painted, and Florence—parchment covers, and in these two cities bindings modelled on those old styles are still being turned out by local craftsmen.

Amongst the State archives preserved at Siena are a number of ancient account books in wooden covers ornamented with painted miniatures, coats of arms, and inscriptions, fastened to the backs of the volumes by three bands of leather, generally white, on which the leaves are sewn. The central band is prolonged across the upper cover and beyond it, the loose end terminating in a sort of clasp which fastens the edges of the book. The front cover is thus divided into two rectangular panels, and of these the upper is nearly always occupied by some painted device, such as an escutcheon or an emblematic picture, the lower half bearing an inscription setting forth the contents of the book. In the most ancient of these bindings, however, picture and inscription are placed together on the upper sectionof the board, the lower showing simply the plain surface of the wood. The period covered by these characteristic Siennese bindings extends from the 13th to the 18th century. Their origin is as follows: The Tax Office (*Gabella*), and Finance Department (*Biccherna*), of Siena were for ages under the control of certain functionaries belonging to the noble or privileged class, who held office in turn for periods of six or twelve months. Each of these magistrates, at the end of his term, had bound up, in the style just described, a statement of his accounts, etc., for the period of his administration. The bindings were executed at the public cost, and the magistrates usually ornamented them with their arms, their portraits, or some allegorical design. The books then remained in the public offices, and the series of those prepared for the "Biccherna" is of great interest and value. Well-known Italian artists, like Ambrogio Lorenzetti and Dominico Beccafumi, were frequently called in to execute paintings on these covers. The earlier examples, which extend as far back as 1258, are ornamented in a more simple style than the fine specimens of the period 1460–1619, and are thus more interesting as ancient bindings than as works of decorative art. Many of these unique Siena book covers have been removed from their original resting place, and specimens of them are thus to be found in various Museums. There are, for instance, three in the South Kensington Museum, and two of them are illustrated herewith, together with the oldest cover of the series. This last illustration, reproduced from our Italian contemporary, has a representation of Brother Ugo, a Cistercian monk, who was chamberlain of the Republic of Siena at the time (1258) that this cover was made. The remains of the central leather band are seen below the picture, and the socket of a smaller fastening half way between it and the top of the board.

Siennese Book Cover. Date 1258.
(Original is at Siena.)

Siennese Book Cover. Date 1358.
(Original is at the South Kensington Museum.)

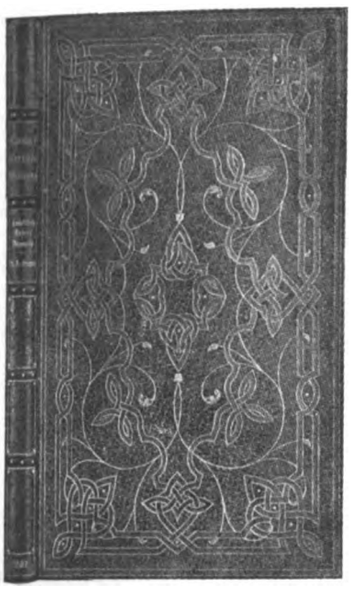
Siennese Book Cover. Date 1402.
(Original is at the South Kensington Museum.)

One of the covers now at South Kensington dates from a period half a century later (1310), and measures about 14 by 9 inches, the board being over half-an-inch thick, and furnished with four plain metal bosses at the corners, projecting another half-inch. The chamberlain in that year was also a Cistercian monk, Brother Mio. The central band is painted red and decorated with a stalk and leaf design in white.

The next South Kensington example—an upper cover—dates half-a-century later still, *i.e.*, 1357–8. At the top of the board, which is half-an-inch thick, is a picture of the interior of the office where the taxpayers made their payments. The lettering of the inscription below is in black, within red lines, a band of ornament in red being below. The names of the Treasury Commissioners are mentioned, as well as that of the Secretary, Minoccio di Giovanni Aldobrandini. Both panels are surrounded by a gilt border with incised leaf decoration.

The last of the three illustrations represents work of fifty years later (1402). Again we get on the board (15 by 12-in.) a picture of the interior of the Treasury of the Siennese Republic, surmounted by the Arms of the City, below being the Arms of the Receiver and Commissioners; and an inscription mentioning them and the Secretary, Biccho Ubetini. There are no red lines in connection with the lettering, and all the borders are painted. As no leather band is visible on the front of the cover, the board must have been secured to the book by some attachment from the inner surface.

Those of our readers who would like to know more about this remarkable series of ancient book covers will find pictures of all those on the Biccherna records in Cav. Alessandro Lisini's fine work on "Le Tavolette dispinti di Biccherna" (1901), a copy of which may be seen at the National Art Library at South Kensington. Ninety-two "Biccherna" covers are still extant at Siena, dating from 1258 to 1682, as well as eleven other covers of similar character, which come down to 1690. Sixty or seventy more, at least, have been lost, strayed or stolen at some time or other. One of the earlier of the extant covers, dating from 1291, is unusual in that the volume was quarter bound in red leather. In a few cases the central leather band passed to the back of the volume through a hole near the inner margin of the board. Soon after the middle of the fifteenth century the pictures began to be enclosed within a sort of frame, and from a century later still this frame came to be elaborately carved and decorated, and enclosed practically all the surface of the board, there being only only a line or so of inscription at the foot, as in the case of an ordinary print.



As already mentioned, this curious phase of the bookbinders' art has been revived at Siena, and visitors to that ancient city, after admiring the genuine old examples preserved in the Biccherna collection amongst the State archives, may go into some of the local shops and there purchase, as souvenirs, autograph albums, sketch books, etc., bound in similar fashion by twentieth century Siennese craftsmen. These modern-antique bindings are not, it is true, always very faithful reproductions of the originals, but this is not so much the fault of the worker as of the buyer, who thinks more of the price he has to pay than of the degree of artistic workmanship exhibited by the article itself.

In an article on "Books as a Librarian would like them," by H. L. Koopman in the *Printing Art*, it is stated, with reference to the treatment a book should receive after it has left the printer's hands, "What that treatment is the binder knows better that I can tell him. When he has applied it, the book will come out of his hands at once solid and flexible; unmutilated, either on the outer edges where mutilation can be seen, or at the back where it cannot be seen but where it neverthless injures the integrity of the book; covered with honest boards that will stand use, and clad with a material, cloth or leather, that is both strong to resist wear, and also contains within itself no seeds of deterioration. Besides this let it have a character, however unobtrusive, befitting the contents of the book, and the binder will have paid his full debt to the present and the future."

American Bookbindings.

Writing in the *American Printer*, Mr. M. Kalaba, a New York art binder, says that from exhibitions by several publishers and art dealers of fine bindings, it is seen that the finest bookbindings come from abroad. Publishers even do not hesitate to say there is not enough ambition among American bookbinders to place them on a level with the English and French binders. But it should be easy to prove that the American bookbinder can do as well if not better if he gets sufficient en-

An American Binding (outside).

couragement, that is, enough time to produce specimens of real art, and the full value for his productions. The two illustrations reproduced herewith represent a binding executed in Mr. Kalaba's own establishment, the Trow Press, and show that his claim on behalf of the American binder is well founded. The book is a copy of the 1597 edition of the "Gerichte Ordnung" of Charles V., Emperor of Germany. It is bound in wine-coloured

An American Binding (inside.)

levant, with inlays of red and green, the interlacing Grolieresque bands and decoration being tooled in gold. The second illustration represents the doublure of the volume, also in morocco elaborately gold tooled.

Mr. Kalaba fully recognises the value and importance to the student of fine binding of facsimile illustrations, as the following passage from his article demonstrates.

"Much attention has been paid of late years to the subject of artistic bookbinding, and many excellent works have been published dealing in more or less exhaustive manner with the whole subject of the art as practiced in the different countries of Europe. But the subject is one which it is impossible to treat adequately without copious examples or illustrations, and hitherto it has only been possible for students and amateurs to gain a laborious acquaintance with its various phases by repeated visits to public libraries and to the collections of those unselfish private collectors who will allow their treasures to be inspected. Within the last few years, however, the combination of photography and chromo-lithography has been brought to such perfection that not only the colours and texture of the material with which a book is bound can be successfully reproduced, but the facsimile of the actual impression of the stamp or tool used in the ornamentation can be given with absolute accuracy."

A De Luxe List of Bindings.

The handsomest sale catalogue of bookbindings we remember to have seen has just been published by Herr C. G. Boerner, of Leipzig (Universitats str 26), with the title of "Kostbare Bucheinbände des xv. bis xix. Jahrhunderts," *i.e.*, Books in Fine Bindings from the 15th to the 19th century (20 marks). This *Katalog XXI.* takes the form of a thick folio volume of upwards of 100 pp., finely printed on good paper, with ample margins and enclosed in a tinted wrapper. In all, some 230 items are described in both the French and German languages, but the great feature of the list is the splendid series of 52 full-page plates, of which 9 are in colours. Several of them are in the full size of the originals, and where this is not the case the actual dimensions of the volumes are given on each plate. An interesting introductory essay, entitled "The Golden Age of Bookbinding," by Carl Sonntag, jun., is prefaced to the catalogue, and treats, among other matters, of the universality of the German art binder of the 19th century, as instanced by the fact that many of the best bookbinders of that period, in both France and England, were of German birth or descent. The arrangement adopted in the enumeration of the bindings described in the catalogue is a chronological one, and hence the series of illustrations commences with reproductions of half-a-dozen examples of 15th century work. Next comes a fine characteristic specimen from Grolier's Library, with the typical interlaced bands, in this instance uncoloured, and the usual inscription. For this beautiful piece of early 16th century Italian or Lyonese work £825 is asked, or about £8 per square inch of cover surface! Two or three choice examples of chased or pierced silver covers, dating from the 17th century, are among those illustrated, and nearly contemporary with them are a couple of specimens of S. Mearne's binding, almost the only bits of native English craftsmanship mentioned. To our mind, one of the most interesting features of this fine catalogue is the evidence it affords that the beautiful, but hitherto almost neglected, stamped or embossed bindings of the first half of the 19th century are beginning to be appreciated. Several examples are illustrated in the list under notice, and good prices asked for them. Though the details of, for instance, some of the early specimens

Bookbinders' MACHINERY and SUPPLIES

We have a very fine range of machinery for the Binding Trade, and solicit your enquiries. We can meet all your requirements whether large or small.

Caxton-Beatrice Blockers

Made in England from the original patterns —not a German imitation. Four supports to head, sliding feed table, powerful inking system.

Caxton Rotary Perforator

For run-through and stop work. Gives a clean reliable, slot-like perforation. Easy to adjust, speedy in operation.

Stitchers, Cutters, Presses

Large and small, hand and power.

Digitized by Google

of the so-called "Cathedral" style are not altogether in keeping with the spirit of the design, excellent taste and workmanship is nearly always apparent in the tooled bindings, whilst those stamped from dies in the thirties and forties are generally masterpieces of this class of book cover decoration. Thouvenin, of Paris, was one of the leading exponents of these blind stamped bindings, and several examples of his work are figured amongst the illustrations in this catalogue. The almost contemporary work of Westley, Dobson, and others in London was doubtless inspired by his, and culminated in the remarkable covers of leather and papier-mache, embossed in high relief and ornamented with medallions, etc., which came into vogue in London in the late forties, mainly under the auspices of Noel Humphreys and Owen Jones. These and other beautiful examples of the art of the binders of a few decades ago will probably be sought after by collectors not long hence, cheap, though by no means common, as they are to-day.

THE Munich Bookbinders' Price List.

It is so commonly believed that almost every industrial operation can be done much cheaper in Germany than in this country, that we have thought it would be of interest to reprint, as we do below, some extracts from the new price list of the Master Bookbinders' Association at Munich, although the Bavarian capital is not one of the largest German bookbinding centres.

The Association has lately given attention to the question of prices, and the result of this is a recently published little book containing the new scale of charges. There is a long list of the names of the best known periodicals, with prices for binding them in three different styles. The original German prices have been approximately rendered into English currency. The extracts indicate something of the dimensions and thickness of the books.

The scale for pamphlet work is very moderate.

* This word is difficult to translate. It means a coloured strip applied on the edge; in Germany it is often used on thin brochures.

Blank Books & Loose-Leaf Supplies.

By HARRY M. BASFORD in the *Printing Art*.

[In reprinting the following interesting and instructive article, we have thought it well to retain throughout the term "Blank Book," an American trade designation which covers not merely account books in general, but also ruled exercise and memorandum books, cheque books and in fact any kind of bound volume the leaves of which are blank, in contradistinction to a printed book. — ED., BRITISH AND COLONIAL PRINTER AND STATIONER.]

Blank books and loose-leaf outfits naturally fall into the same class of work and there is a good opportunity for profit in handling jobs of this kind. Even if you have no bindery in connection with your plant, you can take the orders and send the bindery work out to another shop to be done, still realising a profit. In a general way I do not think that the prices of blank books have been cut so badly as the prices of some other kinds of printing, and of all the work that comes to a book bindery, the blank books and loose-leaf binders and sheets offer the best opportunity for a profit. If this condition holds true in your section you should do your best to foster it, so there will be no growing tendency on the part of the trade to cut prices below a fair margin of profit.

In selling blank books it is advisable to have the customer draw up the form of ruling himself, if you can persuade him to do so. If he insists, however, on handing you only a few rough marks on a piece of paper that no ruler would accept as the copy for the job, it is up to you to draw up the copy yourself. Make a neat, clean copy of the ruling and submit it to the buyer for his approval before starting the job. At the same time explain to him that on account of the nature of the work it is impossible to submit proofs of ruling, but that if he will pass your copy there will be no necessity for a ruled proof, as the completed work will be identical with the copy. It is also well to inform him that a proof of the printing will be shown him if desired, but that the ruling will be finished at that time and no changes in the ruling can be made. The best way to show a proof of a blank book heading is to paste the proof, taken on thin paper, on a sheet of the ruled paper supplied for the job, thus giving the customer a very fair idea of the completed page.

Disagreements frequently occur over blank books, and the salesman should do his utmost to avoid the possibility of error by thoroughly understanding the job himself and passing the instructions on in writing to the workmen who will handle it. Books with long and short leaves require special attention, and in quoting a price this extra time should be well covered in the estimated cost. The style of binding can be best shown to a customer in taking his order for a book by having a sheet with the various common styles of binding shown by pictures in colour. An ocular demonstration is the best kind of illustration to a man who is not familiar with the different styles of binding books. A sample sheet can be made up from an old blank book catalogue of some stationery house, which frequently contains sheets of this kind.

The manufacture of loose-leaf sheets for use in binders is one of the newer lines of work that have come to the printer in the last ten years and good profit can be made by handling this work. Most of the sheets used by large business houses are made to order, and the only additional equipment that the ordinary printer will require to handle this work is the necessary punches for punching the round or slotted holes to fit the binders. Care should be used in buying die punches to fit the punch machine, so that the selection of dies may be the ones that will be most called for in your vicinity. Some printers find it profitable to stock a supply of current and transfer binders to sell with the sheets they make up on orders, and this plan would seem to offer an excellent method of extending a business. The metal parts for making up many of the standard binders on the market may also be bought from the manufacturers, and a good bookbinder will be able to turn out a very presentable binder complete by making use of these parts.

In stocking a supply of binders it is not necessary to start with a great variety of sizes. Most binders are made for sheets measuring about eight, nine, or eleven inches on the binding side, and the length usually runs from eleven inches up. In making the binders, you can, of course, make them as long as required with the same length of metal part. Full canvas, canvas with leather corners, and half corduroy will be the styles most often called for.

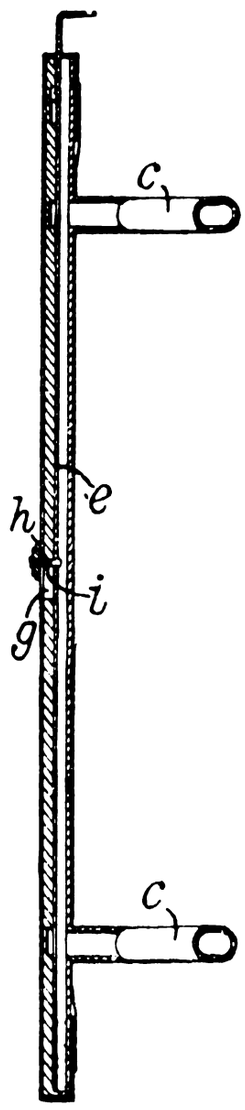
A suggestion that I think will result in customers favouring your house is to be sure that every binder that goes out has a good pair of end sheets to keep the other sheets clean, and in filling an order for sheets only, the end sheets can be added if the customer's binder is without them. Every bookkeeper likes to use these end sheets in a binder and it costs but little to make them up. This can be included in the estimate if desired.

A die-cut loose-leaf is the best, but machines for die-cutting them are expensive and most printers will trim the sheets on the paper-cutter. In doing this the man handling the loose-leaf jobs should be instructed that every job must must be cut exactly the size ordered and that unusual care must be taken with the work. There is a draw to the knife of a paper cutter in using, which makes a variation in the size of the sheets cut at one time. This variation should be guarded against as much as possible. It is a good plan to have a set of metal plates made of the standard sizes of the sheets you make, and to use these as a guage each time a job is cut. Nothing disgusts a bookkeeper so much in using a loose-leaf system as to have a lot of leaves come from the printer that are an eighth of an inch larger or smaller than the ones he is using. This difference makes it difficult to use the new sheets with the old ones, and as many bookkeepers are not prejudiced in favour of loose-leaf outfits anyway, the variation in sizes gives them a good argument against the entire system.

All loose-leaf work and all blank books should be carefully wrapped and delivered. Loose leaves should be wrapped in packages of two hundred and fifty or five hundred sheets unless delivered with the binders, when they should be inserted with the index in the binders.

The making of indexes for loose-leaf outfits is another line of work which goes along with the system of accounting, and which is profitable work for the printer. Sub-divided indexes can usually be bought cheaper from the large maker than you can make them yourself. Or you may buy the tabs and attach them to the leaves. Paper for indexes may be ruled up and printed in the common sizes, so as to be ready for quick delivery. In taking an order for an index it is important to ask if the index is desired with plain sheets or with the sheets ruled and vowelled, as they are used both ways. You can usually get as much for one style as the other.

There is a field for loose-leaf and blank-book work by working hand in hand with one or more stationery houses in your locality. The commercial stationer sells both the books and the binders, and may throw considerable loose-leaf work to you if you make him a sufficient inducement to do so. You may either give him a commission or an inside price, or reciprocate to him for sending orders to you direct by referring orders for stock binders to him to fill.

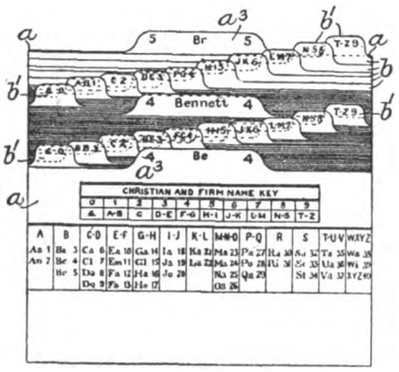


Digitized by Google

There are new things in loose-leaf accounting constantly coming on the market, and the enterprising printer should keep in touch with these new things through the trade papers, so as to be familiar with every style of binder, indexing, or sheets that may be brought to his attention by a customer.

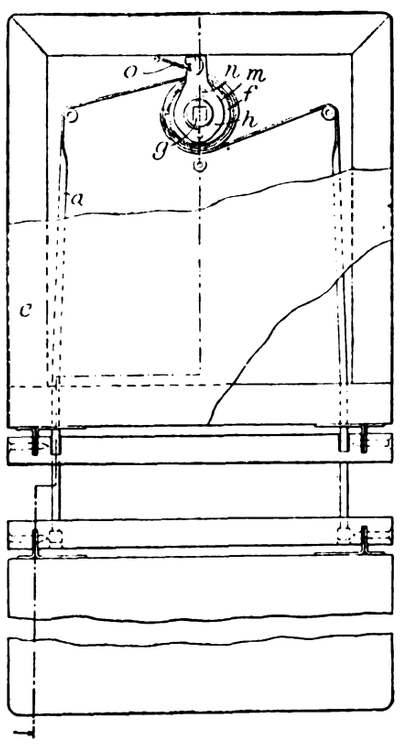
I know of no department of printing that offers better opportunities for business and profit than loose-leaf outfits and blank books. The field is not so crowded as in other lines of commercial printing, and if you show to your patrons that you can fill their orders for these goods satisfactorily you will get many jobs of this kind.

New Bookbinding Patents.



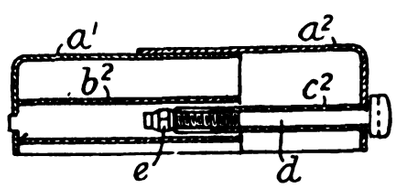
In a temporary binder of the type in which leaves, etc., are filed on curved tubes or spikes fixed to one side of the back and mating with curved spikes on the other side of the back, the spikes being locked by a sliding bar, means are provided for locking

the sliding bar to the back. The means consist of a key-operated disc *h* screwing on a pin mounted on the sliding bar *e*, the disc being adapted to enter a hole *g* when the bar is in the locking position. A presser plate which continually grips the tubes or spikes *c* may be made wholly of india-rubber, etc., or may have its holes lined with rubber. The invention is patented by Mr. H. T. King.



An invention patented in France by M. R. Chotteau deals with a movable binding for papers, letter files, account books, etc., which can be opened out flat to facilitate finding or reading the contents. It consists of two metal plates, between which the collection of papers is secured near the back. The plates are connected together by little metal rods, upon which the previously perforated papers are subsequently threaded. The rods run across the back of the binding, and are made of a material which is flexible in all directions, so that the binding can be opened out like a book, without having to remove the plates or take the binding to pieces. For this purpose tubes formed by wire wound in the form af a spring are employed as rods, though any other pliant tubular device can be used. The wire is wormed so that it can be secured with nuts and screws to the metal cover.

An invention by Mr. E. Dunn relates to indexing devices of the kind comprising a set of major guide units having tabs bearing alphabetical sub-divisions individualised by numerals, as described in Specification 1,465, 1911, constituting a major index, and a set of minor guide units having laterally stepped tabs also bearing alphabetical sub-divisions individualised by numerals constituting a



minor index, whereby a filed element between the units may be indicated by combining a numeral of the major index with one of the minor index. The invention consists in making the separate sets of minor guide units *b* alike in configuration and as regards the indications on their tabs b^1. The tabs a^3 of the major units *a* are situated at the middle thereof, and the tabs b^1 of the minor units *b* bear the numerals 0–9.

In a loose-leaf ledger, etc., invented by Mr. F. James, in which the papers are filed on flexible members, these members *a* are tightened by being wound on the circumference of one or more discs *f*, wheels, or like rotary members arranged in one of the folding

covers *e*. Means are provided for locking the rotary member against rotation in the direction for unwinding, for example a spring-pressed arm *h* pivoted eccentrically to the disc *f* and provided with projections *n* for engagement with one or more concentric grooves *m* in the disc. The flexible member *a* shown is circular in cross-section where it passes through the leaves and flat where it winds on the disc A lock may be provided to prevent operation of the arm *h* to release the disc. The key aperture *g* of the disc may be closed by a flap, etc., which can be locked.

Mr. J. T. Cartwright has patented a loose-leaf binder that comprises angular clamping plate a^1, a^2, Fig. 3, one or more pairs of telescopic filing tubes (not shown), and one or more locking posts consisting of an outer

tube b^2 and an inner tube c^2, which is split at its end and is expanded to grip the outer tube b^2 by means of a conical nut *e* travelling on a rotatable screw-threaded rod *d* within the tube c^2.

Invented by Mr. P. Aborlen, a machine is constructed to perform both the operations of binding and cutting books, and may operate simultaneously on two books of different sizes. The books are raised from a pile and clamped between plates which travel in an horizontal plane with an intermittent motion around two notched wheels, after the manner of an endless conveyer, so that, in successive steps, the backs of the books are glued, the covers applied, the covers pressed on, the backs formed, and the books presented to rotating cutting knives. The books are initially stored in an inclined guide, and are raised therefrom to the clamping plates by means of fingers attached to a reciprocating belt, and the plates are pressed together by a cam-operated arm, allowing the backs to protrude. The closing or locking of the clamping plates is effected by the arrange-

ment shown in Figs. 6a and 6b. The counter plate *z* carries two spring-pressed blocks 1, 2, sliding upon a bar *y* and provided with saw teeth, which, after the plates have been adjusted, are allowed to engage with saw teeth provided on branches 4. In order that the plates may be opened and the book released before cutting operation, smooth blades 6, provided with bevelled ends, are pivoted between the branches 4, and under the action of bevelled rods, force the blocks 1, 2 inwards against the pressure of the spring, and release them from engagement with the branches 4. The book, when clamped and locked between the plates, in its first step passes over a drum immersed in a bath of glue; at the end of the second step, while the plates are at rest, a pile of covers is raised under the action of a counter-weight, and the uppermost cover is applied to the book, the operation being controlled by a cam; and in the third and fourth steps, the book with its spread out cover passes over spring-mounted rollers, Fig. 13, which press the cover upon the book and then between conical rollers, Fig. 14, which are adapted to form the back. During the application of the cover, the plates are prevented from rising by means of a stop *t* on one of the plates passing beneath an horizontal guide rail R, Fig. 13, and by a small grooved roller *g* which runs on the upper part of the rail. At the last step the plates are opened and the book falls between adjustable clamping fingers *a*, *b*, Fig. 8, which carry the book, with the back and three edges protruding, down an incline M, N past rotating cutting knives. The fingers *a*, *b* are guided by a traveller running in a groove *i*, which is so shaped as to cause the book to be cut at the top and bottom edges by an upper pair of knives, and then to turn at an elbow in the groove so as to present the side edge to a lower knife. The sequence of operations is completed while the plates travel from one notched wheel to the other, so that by utilising each stretch between the wheels, the machine may operate on two books simultaneously.

Under an invention by Mr. E. H. Whiting an index is formed by applying to the edge of the top leaf or tablet *a* the whole of the index characters employed, and cutting-off the margin of each underlying leaf, etc., *b*, *c* . . . up to and including the character which indicates the contents of that leaf. Thus by placing the finger under any particular character and raising the overlying leaves, the leaf indicated by that character is exposed. Fig. 1 shows the characters divided into groups of two. The uncut portions of the margins of the underlying leaves preferably bear the same characters as are indicated on the corresponding parts of the top leaf, and the under surfaces of each leaf may bear the characters which indicate the pages exposed when that leaf is turned up. The leaves, etc., may be bound up with or separately carried in a ledger, address book, etc.; or may be hung on a wall or on a suitable stand such as that shown.

Exhibition of Fine American Bindings

Some thirty exhibitors showed samples of their work in bookbinding at the sixth annual display of the Guild of Book Workers at the Fine Arts Building in New York City, last month. Amateurs as well as professionals were represented.

Three books by Harvey S. Chatfield attracted a great deal of attention, and were declared by many experts to be the finest examples of design on view. The "Rubaiyat of Omar Khayyam," bound in black levant, crushed, with full leather doublure, is considered unique. The doublure was tooled in gold to represent a storm and the succeeding calm. The sky was done in blue leather and the sea in green, while the surf, sun and its reflection on the water were in gold. Another of Mr. Chatfield's books was "Mother Michael and Her Cat," bound in grey levant, crushed, inlaid with gold. The cover design was a dancing cat, in colours. Four books shown by Edith Diehl, of New York, were considered to show the finest technique. A copy of the Bible was bound in dark brown crushed levant, with a blind tooled interlaced design on a stippled background. The doublure was of wine-coloured levant. Esther McDonald, of New York, showed four books, the most notable of which was a copy of "Elsie Venner," bound in black levant, with panels made of rattlesnake skin. Mother-of-pearl was used to good advantage by Rachel McMasters Miller, of Pittsburgh, in her binding of "The King of the Golden River." The book was bound in full green levant, tooled in gold and inlaid with mother-of-pearl. There were five circular pieces about which circles of gold had been tooled.

Canvas Jackets for Books.

Bound books that are required to last for a number of years should have a canvas or drill jacket, which, when worn, may be renewed. The cover is a protection to the binding, and for permanent records is very desirable, says Mr. J. J. Pleger, the Manila Government binder. The canvas or drill is cut to allow 1½ inches turn-in on the front, top and bottom; the boards are cut to the size of the book cover boards. The canvas is stretched over the book cover and the boards are glued about 1½ inches on the top and laid on the inside of the open cover with the glued side up; the projecting canvas is drawn over the front edges of the boards and rubbed down. The turned-in canvas on the top and bottom is cut diagonally to within three-eighths of an inch of the joint of the book, and is glued and drawn tightly over the edges of the board. The overlapping canvas on the corners is cut to a neat turn-in and the ends glued and turned in on the boards. If back titles are desired, the position is marked to enable the finisher to centre the lettering on the title space, and the canvas cover is then pulled off the book. A minor segment with about two inches spring is cut out of the unprotected end from corner to corner, and the ends of canvas glued and turned in under the boards. The remaining turn-in between the boards is glued to the canvas even with the boards. The inside of the cover is lined with marble paper, which is cut a trifle smaller than the book, and is pasted on the board and canvas; the paper projecting beyond the arch shape of the board is cut to permit a turn-in under the board. Type for lettering is set with a slug on the sides and bound tight with string or stout rubber bands; the cover is placed on a piece of binder's board with a press board underneath; the type is inked and laid on the canvas in the proper title space and carefully put in the press, after which the press is run down slightly and released. When dry, the jacket is put on the book.

Machine Rulers, Bookbinders, Printers, and Kindred Trades Overseers' Association.

There was a good attendance at the "Ship," Ivy-lane, E.C., on the 7th inst., when the members of the above association assembled for the first general meeting of the year. The president, Mr. F. C. Peacock, was in the chair, ably supported by the worthy vice, Mr. J. E. Dixon. Among the correspondence were letters of thanks for election to membership from successful candidates in Letchworth and Manchester, and three London applicants were finally considered and passed, while a fourth was deferred for further investigation by the Executive.

Nominations for the positions of officers in the Association were solicited, but there was much reluctance in submitting names against those already standing. Messrs. J. Walker, J. Knight, J. Simpkins and W. T. Lingham were nominated for the positions on the committee vacated by those retiring in rotation, but the entire list will be kept open till the night of the annual general meeting on February 4th, when the elections will take place.

Stewards were elected for the bohemian concert, in the persons of Messrs. Dixon, Lievney and Warner, an event which is to take place about the end of February.

The chairman then called upon Mr. T. Bell to read his paper on "Chemistry." The lecturer introduced his subject in its far-reaching nature and the necessity of limiting his remarks to the greatest possible extent, but his brief analyses were made just sufficiently lucid to the lay mind to keep them within their scientific depth. Most particularly interesting were the various treatments of paper both during the process of manufacture and at the final testing to determine its composition, which matter proved to be the main trend of the discussion which followed.

At the conclusion a hearty vote of thanks was proposed by Mr. J. Simpkins, seconded by Mr. J. Walker and carried with acclamation, and Mr. Bell promised to comply with the general request to give another lecture on this exhaustless subject at a future date.

THE death occurred recently, at New York, of Mr. A. G. Mackay, who invented in 1885 the "Perfection" wire stitching machine. He was born in the north of Scotland in 1835 and went to Canada when nineteen years old. For some thirty years he was in the dry goods trade there, which he quitted to take up a position with the J. L. Morrison Co., whose business he purchased in 1892, and who are now well known on both sides of the Atlantic as the makers of the machine in question.

85, FLEET STREET, LONDON, E.C.

TO TRADE BOOKBINDERS, BOOKBINDERS' PLANT AND MATERIAL MANUFACTURERS AND DEALERS, PUBLISHERS, LIBRARIANS, AND OTHERS

INTERESTED IN THE BOOKBINDING INDUSTRY.

THE Publishers of the *BRITISH AND COLONIAL PRINTER AND STATIONER* have pleasure in announcing that an ILLUSTRATED MONTHLY SUPPLEMENT to that journal is now devoted to matter concerning the BOOKBINDING TRADES.

All branches of bookbinding are dealt with, from practical and technical standpoints, and the historical and artistic aspects of the industry also receive attention. Illustrations of hand-tooled bookbindings and publishers' cases which are remarkable for their artistic design, their historic interest, or their novel character are presented from time to time.

The BOOKBINDING SUPPLEMENT appeals to all those who are interested in bookbinding, whether as a trade or as an art, as all phases of the subject receive their due share of attention in its columns.

The Editor will welcome any news of trade interest that may be sent him, and is prepared to consider original articles of a technical and practical character, with a view to their publication. Information concerning the working of the technical classes in bookbinding, and notices of meetings of trade unions and other bodies associated with the bookbinding industry, are also invited; arrangements can usually be made, if desired, to report the latter, as well as lectures, etc., for the BOOKBINDING SUPPLEMENT. Illustrations and particulars of new machinery and appliances, and information concerning new materials and methods for use in the trade, are likewise of interest. The publishers having no end to serve save the presentation of matter of value to the various branches of the trade, the pages of the BOOKBINDING SUPPLEMENT are open to all, employers and employed, unionists and non-unionists, for the free discussion of trade matters.

As far as READERS are concerned, copies of those issues of the *British and Colonial Printer and Stationer* that contain the BOOKBINDING SUPPLEMENT are supplied at the rate of 2/6 *(payable in advance)* for twelve numbers, including postage. (Foreign postage 6d. extra.) Single copies, 2d. each.

With regard to ADVERTISEMENTS, the bookbinding trade announcements are placed in a POSITION NEXT TO OR FACING READING MATTER in the BOOKBINDING SUPPLEMENT. ADVERTISING RATES sent on application. Arrangements have been made to circulate the journal in quarters likely to be most productive to advertisers of a return for their outlay, and no effort is spared to study the interests of advertisers and readers alike.

Orders for advertisements in and subscriptions to the BOOKBINDING SUPPLEMENT issues should be addressed to the publishers:—

STONHILL AND GILLIS, Offices of the *British and Colonial Printer and Stationer*, 58, Shoe Lane, LONDON, E.C.

The Art of Lithography.

By Mr. Francis Sheridan.

A Lecture and Discussion at the Manchester and District Centre of the Printers' Managers and Overseers Association.

There was an excellent attendance at the monthly general meeting of this Centre of the Printers' Managers and Overseers Association, held in the Crown Hotel, Booth-street, Manchester, when President Thos. Kirkwood occupied the chair, vice-president Fred. Burnett being in the vice-chair.

"The Art of Lithography" was the title of a lecture, giving some experiences and notes on its practice, delivered by Mr. Francis Sheridan, an ex-member of the London and Yorkshire Centres of the P.M. and O.A., and who is now a member of the first provincial centre (Liverpool). In the following report we give some details of several of the items dealt with by the lecturer.

Mr. Sheridan said:—As an introduction to Senefelder's discovery I cannot do better than quote a few lines by the Senefelder Club (an association of artists and printers), who are doing a great work in the forwarding of artistic lithography:—

"A hundred years ago, in Bavaria, Aloys Senefelder invented lithography. He wanted on a sudden to write a washing bill for his mother. He had no paper by him. He wrote it in printing ink on a piece of limestone. When he would have rubbed off the writing he bethought him—it was the inspiration of genius—to take an impression as for a plate; and lo, the stone yielded an impression! Years of labour, of discouragement, of persistent skill perfected the art that we know, and little beyond a few printer's tricks of doubtful value has been added to what Senefelder left.

Senefelder's discovery was this: that as grease and water are antagonistic, a drawing made in greasy chalk on a stone will receive a charge of fatty printing ink if the blank spaces of the stone are kept damp. The lithographer, therefore, makes his drawing on the surface of the stone with black grease; it is fixed with acid; the stone is charged with gum, then the printing is performed by passing an inked roller many times over the drawing and rubbing the ink off upon the paper by means of pressure. The principle is very simple; but by diverse treatments of the drawing and the printing an infinite variety of results may be obtained, and the quality of an early impression pulled upon good paper yields in beauty to no known printing medium.

On the Continent lithography has always been employed by artists. In England it has for many years sunk to the basest of commercial uses; in almost unrecognisable degeneration it wearies our eyes from every advertiser's hoarding."

This reference to printers' tricks is certainly not a very pleasant or flattering one for the present-day lithographer.

Coupling this Association's work with the rotary offset press and promises, the future of lithography is looking much brighter.

Many of the impressions produced by the Senefelder Club are in the class known as chalk drawings, drawings made upon a rough surfaced litho stone with a greasy crayon. Some of their prints puzzle me to arrive at the particular method they adopt in their production and certainly these methods could not be adopted in every-day workshop practice where the editions run into the thousands. One or two examples I have examined exhibit signs of artist's treatment after the stone has been inked in and before the impression is pulled. Of course, where the artist is the printer and only a dozen or so copies are required, a lot of this faking can be indulged in. The case is different where the stone is placed in the hands of the printer and he is told to produce a number of copies equal to the proof submitted.

Sir Herbert von Herkomer, one of the members of the Senefelder Club, obtains some very beautiful results by roughening or graining a litho stone and then filling it in perfectly solid, so that a heavy black or coloured impression can be taken from it when inked in. Upon this solid groundwork he proceeds to sketch his outline or key, which he then develops into a picture by engraving and scraping away the lights until his picture shows up in all its variations of tone, from dense velvety solids to the finest of delicate tints. If we take away the stone and substitute the copperplate, we find the process very similar to that used by artists when producing mezzotints.

Chalk Drawings.

Chalk drawings we are all familiar with, but the manner of obtaining a fine even grain and of etching the drawing after it has left the artist's hands is a lost art in most of our present-day litho shops. If you were to ask the average lithographer how he would treat a freshly drawn chalk job, nine times out of ten he would lead off by stating that you first "gum up," instead of saying "etch it." The etching process is the first one to follow the artist's treatment. This consists in applying a solution consisting of gum arabic and nitric acid. The acid attacks the soap in the crayon, changing into a body that is insoluble in water; by so doing it prevents it spreading and soiling the clean parts of the stone, where it is not required.

In applying this acid it is customary to use a sponge or camel-hair brush. This method may be all right for many jobs, but it is not to be recommended for the highest class of work, because both the brush and sponge are liable to cause streaks.

Perhaps the best method of all for etching, so far as my experience goes, and one which was practised by some of the pioneers of lithography, is to mix up a quantity of acid and gum in a jar, and after suspending the stone for treatment in a sort of tray with an opening in the front, the acid solution is poured evenly over the work. This is drained off and caught in the vessel and then poured on again, repeating the process until the acid has exhausted itself. The stone is then allowed to dry without further attention or rubbing, after which it is washed out and rolled up.

In the preparation of artistic chalk work, correct etching is of the greatest importance, the rolling up and proving taking second place, and they can be carried through in any manner the lithographer pleases.

Grained Transfers.

Before leaving the subject of chalk drawings I would like to make a slight reference to drawings upon grained paper. Often these present a difficulty in transferring; sometimes they squash and at other times there is an absence of detail owing to parts washing away.

Chalk paper is peculiar owing to its great thickness, and the method I advocate for transferring same is as follows:—Place the transfer drawing in the sheets of a damping book after first protecting the face of the paper with about four sheets of dry printing paper. This is done so that the moisture will penetrate from the *back* only. The damping will take a long time and it must not be hurried. Most men become impatient and transfer it before it is fit, or allow the face to become moistened, which is fatal for the best results. Moisture causes the soap of the crayon to dissolve—so you lose the correct tones of the drawing if the transfer is not protected as described.

When the transfer is sufficiently moistened transfer to stone or plate with medium pressure, occasionally damping the back of transfer and carefully rubbing away the layers of paper until there is nothing left but the composition which adheres firmly to the stone. At this stage do not be tempted to use warm or hot water to dissolve the composition, but use a little thin gum solution and do not hurry matters. After its removal, gum up, fan dry, and then rub up, afterwards treating as usual.

These drawings can be transferred to a damp stone if desired, but the results are not so good as when working the method I have advocated. In the case of a job being required in a hurry the back of the transfer can be damped with a sponge instead of placing in the damping book.

Transferring Preparation.

I will now make a slight reference to transferring methods for exacting work. In the ordinary way a litho stone is mechanically cleaned, and while moist on the surface, or after it has been dried, a transfer is pressed upon its surface. Sometimes before transferring, one worker will rub the stone with a little powdered pumice stone, others will increase the sensitiveness of the stone by applying an alum solution, citric acid solution, acetic acid, etc., etc.

For general jobbing work all of these methods work out with passable results, but when some specially exacting work comes along, say the transferring of a half-tone block, for instance, collotype transfers, etc., the transferrer finds there is still something to be desired.

Alum solution is very good for increasing the sensitiveness of the stone, but it has a great fault. It makes the surface of the stone too smooth for comfortable working. If, however, we add a little nitric acid to the solution, it considerably increases its value by opening the pores of the stone and preserves the matt surface.

A stone prepared for transfers with this nitric and alum solution will receive the finest and most spare of transfers without any deterioration.

When the transferring is completed, the stone is gummed up and fanned dry. It is then rubbed up fully without overloading, dusted with french chalk and etched. After etching, *and not before*, it is washed out and rolled up.

This treatment is specially suitable for half-tone transfers, collotype and similar transfer work where the retransferred design must be an exact duplicate of the original and where the presence of every dot is necessary to preserve the beauty of the picture.

Other subjects that the lecturer described were the treatment of zinc plates, printing upon flock paper, music printing, also offset machines, their difficulties and management.

The lecture was illustrated with some excellent examples of the lithographic art, and the proceedings were enlivened by the description of some amusing experiences.

DISCUSSION

The discussion lasted over an hour, and the letterpress section of the Manchester Centre will have to look to their laurels if they wish to keep ahead of the lithographic critics. When we find the king of silent members in the critical gallery, Mr. Harry Critten, stepping out of his shell and carefully, but diplomatically, challenging the lecturer in a wordy warfare, we have opportunities of gaining knowledge. The champion lithographic critic, Mr. Edward McVay, set the ball rolling.

Mr. MARSHALL, when discussing the question of transfer printing, said he knew of another method of fixing the transfers, and it was carried out in various houses in the country.

Mr. THOS. RIGNALL, recently transferred from Liverpool Centre, Messrs. D. Wain, W. E. Dalby, A. Gavin, Jos. Hibbert, and several others took up the cudgels.

When the storm had somewhat abated, and the smoke and heat of the battle had vanished, we looked to see if the lecturer had been slain or fled the field. We found him, however, smiling on all around, not in the least afraid or scarred, and he replied in his own inimitable manner, knowing full well, as he stated in his opening remarks, that the notes he would place before the members that evening were not theoretical but practical, and, although others might differ with him and proceed by other ways and means, he believed they could get similar results, or *perhaps* better.

Ex-President RICHARD BATES proposed a vote of thanks to the lecturer. This was seconded, and Mr. SHERIDAN replied, also acceding to the request that he would come again at some future date.

WEE MACGREEGOR.

Cleaning Paper Currency.

A Unique Machine.

The crisp, newly-made notes as issued by the American Treasury represent the perfection of the papermakers', engravers', printers' and inkmakers' arts. But once these notes get out into circulation it is not long before they become dirty, limp and germ-laden. Heretofore it had been the practice to destroy these old notes. Banks would take out the bad ones and send them to the Treasury, which in turn would issue new ones. Now only the worst of the old notes are destroyed and the new ones issued in their place; the remainder, and by far the greater number of notes turned in, are sent to a laundry and issued again almost as good as new—at a great saving to the Government.

All this is possible because of a machine which has been designed and constructed by Mr. Burgess W. Smith, of the Bureau of Engraving and Printing of the United States Treasury, along lines suggested by Mr. Joseph E. Ralph, Director of the Bureau. This machine is now in daily operation in the Treasury at Washington. In the short time it has been in use its success has been so firmly established that additional machines of an improved pattern are being constructed for installation in the sub-treasuries.

The money laundry machine is a tank approximately three feet wide, four feet deep and nine feet long. This tank is divided into two compartments, the first, or washing tank, having a capacity of one hundred gallons of water, and the second, or rinsing tank, sixty gallons. The essential feature of the machine is a series of brass rollers which fit closely into these two compartments, and over and between which pass two endless belts of cotton duck fitting snugly one on the other. Between these two duck belts, each about sixty feet in length, are placed the soiled notes for laundering.

The construction of these rollers is such that the two belts are kept together and the notes are subjected to a microscopic and gentle rubbing motion in their passage through the machine. This rubbing motion of the belts loosens the dirt from the surface of the notes. The alternate absorption and squeezing out of the water from the belts in the washing and rinsing tanks carries off this dirt. This action is repeated a number of times and serves to wash all surface dirt out of the notes.

The solution in the washing tank, the larger of the two, consists of common rosin laundry soap and a mild chemical bleach—perborate of soda, which also serves as a germicide. After passing through the series of rollers in the washing tank, the duck belts with the notes between them, pass into the rinsing tank, where the process is similar to that of the washing tank. During the rinsing process, some of the soap is precipitated in the paper as resinates of lime, magnesia and alumina, and forms a very efficient sizing for the paper, although the process of washing and rinsing is so short that very little of the original sizing is taken out, as the time consumed in the washing and drying of a note is but two minutes.

From the rinsing tank, the belts carry the notes to the delivery end of the machine. Here is a pneumatic device which strips the bills from the belts and delivers them to another set of belts that pass around two large gas-heated iron rollers which dry and iron the notes flat.

The machine will wash all the dirt that can be washed out by any process of laundering; grease, stains, writing and printing ink, etc., cannot be satisfactorily removed without disturbing the actual printing. Old bills that have the ink in a powdery condition have a faded appearance after the laundering, but the new bills may be repeatedly washed without showing the slightest signs of fading. The washed bills are sterilised and free from any odour.

The money laundry machine requires two girls to operate it. With inexperienced operators the capacity of the machine is approximately 2,000 notes an hour, and 5,000 and over has been attained by experts, the average in actual operation has been 4,000 notes an hour. No skill beyond ordinary dexterity is required to feed the machine.

The Amsterdam Exhibition.

An International Graphic Arts Exhibition is to be held at the Paleis voor Volksvlijt, Amsterdam, from July 15th till September 15th this year, which will be open to exhibitors from all countries, and will include the following groups and classes :—

Group I.

Class 1.—Paper and cardboard.

Class 2 —Various materials: ink, varnish, printing ink, bronze, leather, linen, etc.

Group II.

Class 3.—Book and newspaper printing machines and accessories (including typesetting machines).

Class 4.—Lithographic and engraving machines and accessories, including direct zinc or aluminium rotary and offset machines.

Class 5.—Photo-mechanical process machines and accessories (phototype, collotype, block manufacture, copper and steel printing.

Class 6.—Other printing machines and accessories, such as tin printing, printing on wood, calico printing, wall-paper and embossed label printing machines.

Class 7.—Machines and accessories for bookbinding and for the manufacture of books for office use.

Class 8.—Machines and accessories for box-making and paper wares.

Class 9.—Typefoundry and book printing material.

Class 10.—Stereotype and electrotype machines and accessories.

Class 11.—Power machines (steam engines, gas motors, electro motors, etc.).

N.B.—In this class the machines themselves, as also the way in which an installation, or a part of an installation, is employed, shall be considered as a separate exhibit and shall consequently be eligible to compete in a separate class.

Group III.

Class 12.—Book and newspaper printing, one or more colour printing, books, commercial printing, illustrations, papers and periodicals.

Class 13.—Lithography and copperplate printing: engravings, etchings, maps and charts, trade marks, labels, show-cards and illustrations, playing cards in one or more colours.

Class 14.—Photography (excluding portraits, landscape and amateur photography), photos of manuscripts, drawings, objects and paintings, isography, woodbury-type, roto-photography, natural colour photography.

Class 15.—Photo-mechanical processes: photo-litho and accessorial processes for plans and engineering drawings, phototype, heliotype, collotype, photogravure, heliography, photo line process, half-tone process, three and four-colour blocks, dies, Rembrandt engraving; intaglio printing, Mertens type, and other intaglio processes.

Class 16.—The picture post card industry.

Class 17.—Other printing processes, as tin printing, printing on wood, calico printing, wall-paper, embossed labels, etc.

Class 18.—Bookbinding, artistic and commercial, books for office use.

Class 19.—Box-making, envelopes, and paper ware industry, both printed and plain.

Group IV.

Class 20.—Lighting, heating, safety, hygiene and control.

Group V.

Technical education.

Group VI.

Exhibit of books, engravings, daily and weekly papers, periodicals, etc.

Full particulars and entry forms may be had on application to the secretary of the Exhibition, 790, Keizersgracht, Amsterdam.

Paper Box-Making in Ireland.

A notice has been issued by Trade Board established in Ireland for the trade of making boxes or parts thereof, made wholly or partially of paper, cardboard, chip or similar material, announcing that they propose to fix a minimum time-rate of wages for all male workers (other than learners, as defined by the Trade Board) of 6d. per hour. For male learners (as defined by the Trade Board) it is proposed to fix minimum time-rates of wages ranging from 4s. 6d. per week for persons under 15 years of age to 24s. per week for persons between 23 and 24 years of age.

Any person likely to be affected by the proposed rates can obtain further information about them on application to the Secretary of the Paper Box Trade Board (Ireland), Old Serjeants' Inn-chambers, Chancery-lane, W.C. The Trade Board will consider any objections to the proposed rates which may be lodged with them on or before April 6th, this year.

FOUR cases of lead poisoning were reported from printing establishments last month, making a total of 37 for 1912, against only 32 for the previous year.

Tariff Changes
AND
CUSTOMS REGULATIONS.

From the "Board of Trade Journal."

VENEZUELA.

Unsized white printing paper, for any purpose, is now admitted duty free. Pictures for copying, or pieces of cardboard for binding novels, pay 0·391 bolivares per kilo of gross weight (Bolivar = 9·6d., kilo = 2·204 lbs.)

ECUADOR.

Common writing paper of all kinds, hitherto dutiable at 10 centavos (100 cent. = 2s.) per kilo net, will in future pay 5 centavos per kilo gross

FRANCE.

The following Customs decisions have lately been published :—

Articles.	Tariff No. and Tariff heading under which dutiable.
Advertisements in the form of ready-reckoners (barèmes), on pasteboard:	
Not made up (sans assemblage)	469.—Lithographs or 470.—Printed matter, as the case may be.
Made up...	464.—Cardboard, made-up (assemblé), or 464 ter.—Boards (cartonnages), ornamented, according to kind.
Arsenical fly-papers ...	Prohibited.

COMMONWEALTH OF AUSTRALIA.

Ticket drilling machines are now admitted free of duty. Paper seed packets with gummed flap, are to pay 30 per cent. *ad val.*, or 25 per cent. if of British origin.

DOMINION OF NEW ZEALAND.

It is announced that stencil brushes are dutiable under No. 245 of the Tariff, at the rate of 37½ per cent. *ad val.*, or 25 per cent. if British. Pictures, imported loose for insertion in catalogues, have to pay 20 per cent. *ad val.* under No. 135 of the Tariff, whether British or not.

Foreign and British Paper.

Our Foreign Trade in 1912.

THE following figures show the total values of the British imports and exports of paper. etc., during 1912, and the increases or decreases compared with the previous year :—

Imports ...	£7,233,398	+ £658,848
Exports ...	3,552,716	+ 241,750
Re-Exports...	184,513	— 24,251

It is very evident that the Foreign paper-maker has been very active in catering for the requirements of the British market, and has succeeded in greatly augmenting the value of his supplies during the past year. The imports, it will be seen, exceed the exports of British paper by more than one-half, a state of affairs by no means satisfactory to the home manufacturer.

Imports.

WITH the exception of printed or coated paper (other than hangings) all classes of imports show a substantial increase in value during 1912. The most noteworthy is in packings and wrappings, viz., £352.921, due to the heavier shipments from Sweden, Germany and Norway. The imports of printings and writings not on reels show an advance of £92,708, and those classified as not on reels an increase of £34,606. In reel paper, Norwegian shipments show an expansion, but Sweden, in point of importance, has been supplanted by Newfoundland. Reel paper received from the latter colony shows an increase in value last year, as compared with 1911, of £130,202. Both Germany and the United States greatly reduced their shipments of reel paper to this country. The Norwegian supply of printings and writings not on reels, show an increase in vulue of £34,419, and, whilst Germany, Belgium and Sweden sustained a set-back, it may be noted that much larger quantities have come forward from the United States, the value evidencing an advance of £25,271. The imports of hangings, mainly supplied by Germany, show an increase of £2,429, whilst other printed or coated papers mark a depreciation of £18,707. Strawboards continue to find an expanding market in the United Kingdom, the year's value being up by £99,272, and mill and wood pulp boards were in better request to the extent of £14,942. Unenumerated and articles of paper show an increased importation of £80,677.

Exports.

AN excellent demand has been experienced during the year for British printings, the increase in the total value amounting to £132,826. All British possessions bought more largely, the shipments reaching £1,115,188, or £127,015 higher than in 1911. Exports of British printings were also more extensive to Foreign countries, the value amounting to £629,416, an increase of £5,811 compared with the previous year. Writings were exported to British possessions of the value of £327,026, but owing to a falling off in trade with South Africa and Canada, a decrease is shown of £6,071. Shipments of writings, however, were on a higher level to Foreign countries, the total being £142,799, an advance of £11,320. The increase on the total exports of British writings amounts, therefore, to £5,249 compared with 1911. In the exports of other goods during the year the following comparative increases are shown :—Packings and wrappings, £38,440; hangings, £37,906; manufactures of paste, mill and cardboard, £21,397; playing cards, £5,360; envelopes, £18,349; bags, £11,268; and unenumerated, £8,089. The decreases were confined to printed or coated papers (other than hangings) and paste, mill and cardboard of £29,988 and £7,146 respectively.

THE late Mr. Robert Hood Sharp, of Heaton Moor, Stockport, printer, has left estate of the value of £27,134.

"IN THE PRESS AND OUT AGAIN" is the title of a little book describing how an illustrated book is produced from start to finish in the language and style suited to a child's understanding. All the principal technical processes through which it passes, along with many technical terms in common use, are cleverly treated in a simple humorous vein that always appeals to the youthful imagination. The story is printed in a bold clear type, and numerous funny sketches printed in red and black freely besprinkle its pages. The book is a souvenir of the Children's Welfare Exhibition at Olympia which was so successful, and is by Mr. R. P. Gossop and Chas. Pears. It is published at 6d. by the Saint Catherine Press, Oswaldestre House, 34, Norfolk-street, W.C.

L'ART TYPOGRAPHIQUE DANS LES PAYS-BAS (1500—1540) . . . . par Wouter Nijhoff. Part 15. The Hague, Martin Nijhoff; 7.50 gulden.

We have referred in previous issues to the initiation and progress of this important illustrated work on the printers of the Netherlands during the first four decades of the 16th century. The present part is of more than usual interest, dealing as it does with work round about 1530, which was not only the period when the Reformation began to dawn, but also that when the Renaissance in Art commenced to be reflected in pictorial illustration, under the influence or teaching of men like Durer and Holbein. Hence many historiated initials, architectonic and other decorative title borders, show decided leanings towards the new style. Not that older types of illustration were abolished, for on the contrary they persisted until a much later period, and so we see several examples of early 16th century Flemish woodcutting among the forty or fifty facsimiles contained in the dozen plates which make up this Part. Included in the half dozen specimens selected from books printed by G. Montanus, at Antwerp, about 1540, is a title page, the surrounding border of which—simulating a pedimented doorway, with columns and entablature—is made up entirely of rule work, a very rare instance of the kind, we should imagine, and one which, moreover, it is difficult to account for, seeing that this typographer had an excellent woodcut border of about the same size, which is figured close by. Freaks of this sort suggest that the old-time comp. must have been allowed a good deal of latitude in the use of the decorative elements for a book. The work of several other Antwerp printers is also represented, as well as some from Amsterdam, Louvain, Leyden, and Utrecht. The "black letter" type used is often of a fine bold character, but whilst the italic is generally very commendable, the Roman letter is often weak. However, the printers turned out some very good work on the whole in those days, which marked for them the close of half a century's peace and progress in typographic craftsmanship. Very soon afterwards, the Emperor Charles V., alarmed at the progress of the Reformation, commenced to introduce, in his Netherlandish dominions, those repressive measures against the printers which ultimately kept that branch of industry in leading strings for nearly three centuries, in all the Catholic States of Europe.

"THE PAPER MILLS DIRECTORY," 1913, London: Simpkin, Marshall, Hamilton. Kent and Co., Ltd., Paternoster-row, E.C. Price 2s. 6d.

This handy compendium is now in its fifty-fourth year of publication, and, in addition to information relating to the papermaking trade, the wholesale stationers, paper stainers, and agents will find it invaluable. What makes the directory attractive is the arrangement and classification of the subjects dealt with, and that is a special feature that must appeal to the business man. Paper mills in the United Kingdom are first given in numerical and alphabetical order, then come the millboard and pressing board makers in England and Wales, followed by the paper mills and the mill-board and pressing board makers in Scotland, the paper mills in Ireland, in addition to a list of enamellers, surfacers, foil papermakers, etc., etc., the volume concluding with sorts of papers, with the makers producing each kind, and information about the wholesale stationers. Another feature is the extended list of water-marks and the names of the firms who own them. It may truly be said that the volume is purely a paper man's directory, and nothing is left undone in order to bring it thoroughly up-to-date—the printing, size of type and paper being all that one could desire. From the preface we gather that the past year "may fairly be regarded with satisfaction from a business point of view, notwithstanding that the iron hand of competition keeps prices low." We also learn that the number of paper mills in working order shows no change, whilst the number of machines in England have increased to 426, compared with 407 in 1912. Vats show no change. In Scotland there has been an increase of 4 machines, and the Irish mills are unchanged. The directory is replete and most useful for the mill owner, and the editor (whose offices are at 27, Pilgrim-street, Ludgate-hill, E.C., and from where copies may be obtained) is to be complimented on his work.

"THE STORY OF CHICAGO" is a well got up 8vo. book issued by the Regan Printing House, Chicago, U.S.A., and written by the head of that enterprising firm, who, it may interest our readers to know, is a native of London, and still has a warm place in his heart for everything associated with printing in the Old Country. The book is a concise history of the "Lightning City," showing its phenomenal rise and progress since the early part of last century, when it was but a small collection of settlers' huts round Fort Dearborn, and gives special prominence to the progress of printing in the city, which now possesses some of the largest printing establishments in the world. As an index to its tremendous strides it may be noted that in 1860 the directory contained the names of only 29 printers, that of 1911 showed no less 1,047 large book and job printing offices, excluding newspapers. The book also contains a list of all the many publications that have come and gone since the first newspaper in 1833. Very neatly printed, and bound in cloth with gilt title the volume has a fine appearance.

MR. ROBERT MCCLURE, of "Ye Auld Book Shop," Cromwell-street, Glasgow, having come into possession of a sixteenth century Venetian manuscript relative to Mary Queen of Scots and her son, afterwards James I. of England, has published it, in its original latin, in booklet form. It appears that at the period when the MS. was written that the Venetian Republic sent ambassadors to all European countries, and one of the duties was that each envoy on his return should furnish a *résumé* of his experiences. This story of Mary of Scotland and her son constitutes one of the reports so made, under the name of "Relazioni," and is likely to prove of interest and value to all students of Scottish history. For the benefit of the ordinary reader, however, who is not familiar enough with latin to read this interesting report of the old Venetian, Mr. McClure should issue a translation in English. It would appeal to all admirers of the beautiful but unfortunate Queen.

MESSRS. RAITHBY, LAWRENCE AND CO., LTD., the De Montfort Press, Leicester, have published another of their technical series of books for printers. It is entitled "Stonework: How and Why," and is written by Mr. Vernon Possnett, teacher of stonework to T.C.S., and is a practical book written by a practical man. It deals with materials, methods, signatures, folding, paper sizes, book sizes, margins, and the lay of pages, and explains the whole mystery of imposition, the aim of the work being to reduce the subject to simple elements, so that the various schemes may be understood and easily put into practice.

THE "Penrose Process Pocket Book and Diary for 1913" is in the usual handy form, with diary pages, cash account and memoranda pages, and the notes, formulæ, and useful tables for process workers and others have been brought up-to-date by the addition of the very latest information concerning the various processes and formulæ treated on. The book is a perfect *vade mecum* for the process worker, and should be in the hands of every one who desires to attain to the best knowledge of his art. It is published by Messrs. A. W. Penrose and Co., Ltd., 109, Farringdon-road, E.C. The price is, in leather cover, 2s.; cloth, 1s. 6d.

THE following were the values of the stationery imports into North Manchuria during 1911:—Manchouli, £1,523; Suifenho, £970. Total, £2,314 compared with £3,852 in 1910.

Photographic Survey Work.

One of the most interesting and valuable branches of work that can be taken up by a photographic society is that of photographing the objects of historical, antiquarian, or other interest in the district in which the society is situated. Many photographic societies in the country have been engaged in this work for years, and have produced an amazing number of pictures and records that will be of much value to future generations. In connection with this work a conference regarding a photographic survey of Norfolk and Norwich was held at the Public Library, Norwich, the other day, between a sub-committee of the Public Library Committee and representatives of the local learned and scientific societies, at which the chair was taken by Mr. H. J. Copeman, the Chairman of the Library Committee.

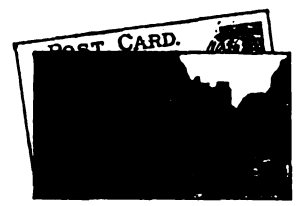
Mr. George A. Stephen (city librarian), in a statement at the outset, said that shortly after the disastrous flood in Norfolk and Norwich during August, 1912, the Norwich Public Library Committee decided to preserve a permanent pictorial record of the flood by collecting photographs taken by professional and amateur photographers. This naturally led to the consideration of a larger question, namely, the collection of photographs of all that is interesting, valuable and characteristic of Norfolk and Norwich. At the last meeting of the Public Library Committee a report on this subject by the city librarian (Mr. George A. Stephen) was considered. After describing the work of photographic surveys in various counties, he stated the case for Norfolk: "Few counties offer so rich a field for photographic survey work as that of Norfolk; its wealth of old domestic buildings and churches, and its castles, abbeys and priories, are interesting for their historical associations or their architectural beauties; its geological deposits and ancient earthworks attract the geologist and palæontologist; its varied flora and fauna delight the naturalist; while the beauties of its pastoral scenery, Broadland, Poppyland and its sea-coast resorts give pleasure to all persons who love picturesque scenery. All these subjects, as well as civic functions, important ceremonies, and passing events, provide material which is worthy of being photographed and permanently preserved for general use in conjunction with the valuable and extensive local collection (which contains about 7,000 prints and 300 maps), and for the benefit of posterity.

The Public Library Committee received the city librarian's report favourably, and appointed a sub-committee to enter into negotiations with the Norwich and District Photographic Society and other local societies, with a view of preparing a practical scheme for an extensive and systematic photographic survey of Norfolk and Norwich. The object of the proposed survey should be to preserve, by permanent photographic process, records of antiquities, art, architecture, geology and palæontology, natural history, passing events of local or historical importance, portraits, old documents, prints and characteristic scenery of the county of Norfolk. All prints approved by the Survey Committee would become the property of the Public Library, and would be available for public inspection and for exhibitions. With the view of stimulating public interest in the proposed Norfolk Photographic Survey, and of acquainting persons of the scope and methods of photographic survey work the Public Library Committee is arranging for a public lecture, with lantern illustrations, to be delivered on this subject by Mr. L. Stanley Jast, the chief librarian of the Croydon Public Libraries, and the Hon. Curator of the Surrey Survey, at Blackfriars' Hall on Friday evening, January 24th.

The Chairman said he was sure they would all agree with the suggestion that had been made. The idea first arose through the flood, a suggestion being actually made that they ought to try and secure as complete a set of photographs as was to be obtained of flood areas in city and county. That suggestion was taken up very enthusiastically by the city librarian, who knew what was being done in other places in the way of photographic survey.

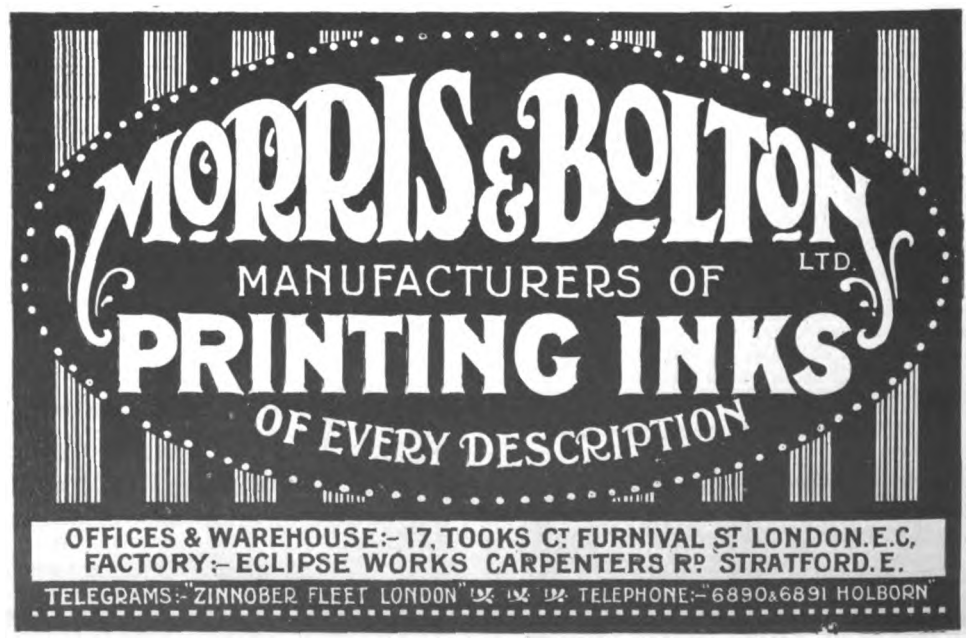
After some discussion the following resolution was unanimously adopted:—"That this conference recommends that the Norwich Public Library, in conjunction with the Norwich and District Photographic Society, undertakes a local photographic survey." It was further agreed that the Executive should consist of the Chairman and two members of the Library Committee and the librarian, one delegate from each of the following societies: Norwich and District Photographic Society, Norfolk and Norwich Archæological Society, Norfolk and Norwich Naturalists' Society, Norwich Teachers' Field Club, Pre-historic Society of East Anglia, Museum Association, and the Norwich Science Gossip Club, and five co-opted members elected for special knowledge of the work.

A sub-committee, consisting of Mr. H. J. Copeman (chairman of the Public Library Committee), Mr. E. Peake, Mr. W. R. Rudd, Mr. L. G. Bolingbroke, and the librarian (Mr. George A. Stephen) was elected to carry out preliminary arrangements pending the appointment of the executive proper.



A Compensation Appeal.

In the Court of Appeal, on Friday last, before the Master of the Rolls and Lords Justices Buckley and Hamilton, the case of Mabel L. Schofield *v.* W. C. Clough and Co., came on. The applicant, a workgirl, appealed on a decision of the Salford County Court Judge ordering the removal from the register of an agreement between her and her employers by which the latter agreed to pay her 8s. 2d. a week as compensation under the Workmen's Compensation Act for injuries received in the course of her employment. Mr. Sankey, K.C., said the applicant met with an accident in the course of her employment as a puncher with Messrs. Clough, lithographic printers, of Pendleton, which resulted in the second finger of her left hand having to be amputated. On the day after the accident Miss Schofield attained the age of 21, and if it were held that she was of age on February 8th, she was only entitled to compensation at half wages—4s. 1d. The employers were told the girl's exact age, but they entered into an agreement to pay her 8s. 2d. a week during incapacity from work, or "until such payments should be ended, diminished, increased, or reduced in accordance with the provisions of the Act." Later the matter came into the hands of an insurance company, and an application was made to the County Court Judge to rectify the agreement by striking out the recital that the girl was "under age" at the time, and altering the sum payable from 8s. 2d. to 4s. 1d. This was done, and on appeal it was decided that the Judge had no power to rectify in that way. On April 27th last an application was made to the County Court to remove the agreement from the register, and this the Deputy Judge had done. Counsel submitted that he had no jurisdiction to do that. Mr. Acton, for the respondents, argued that the Court of Appeal had, in other cases, directed the County Court Judge to do what the Deputy Judge had done in this case. Counsel contended that under the circumstances there never was an agreement between the parties The Court allowed the appeal, holding that the County Court Judge had no jurisdiction to make the order against which the applicant appealed.



THE London house of Messrs. C. H. Lorilleux and Co., printing ink manufacturers, New-street-square, E.C., sends out to customers an attractive calendar for office use. It consists of a grey card (15 by 10½ inches) in the centre of which is a picture of an incident of Puritan times, entitled "Between Two Fires," printed in colours and enclosed in an embossed border. The firm's advertisement is neatly printed at the top of the card and the dates are on monthly tear-off sheets at the foot. A very neat production well finished in every way.

LECTURES ON THE
History of Printing and Bookmaking

The second lecture of the course of six on "The History and Progress of the Arts of Printing and Bookmaking," which are being delivered at the St. Bride Foundation by Mr. R. A. Peddie, librarian of the Typographical Library in that institution, was given on Monday evening. There was a fair attendance, but nothing like so good as these admirable lectures merit. In addition to a capital selection of lantern slides specially prepared to illustrate the lecture, there was again an interesting display of early printed books from the famous St. Bride Technical Library, on a long table down one side of the Large Hall, arranged in the sequence in which they were dealt with by the lecturer.

Mr. PEDDIE dealt in his second lecture with printing in the sixteenth century, having covered the fifteenth century in his first lecture. The sixteenth century, he said, was a period of very quick development and of great changes, but at the same time these great changes were changes more in the format of the book—in the type and in the addition of the finer points connected with book production rather than the greater changes which they would come to in succeeding centuries. For instance, in his first lecture they had left the book still principally printed with gothic type at the end of the fifteenth century, but roman type had obtained an almost complete hold in Paris, if not throughout France. Early in the sixteenth century roman type again got a hold in the German-speaking countries. It was in the early part of the sixteenth century that the question of the design of type was for the first time taken into serious consideration.

The first slide shown was a reproduction of a portion of a page of fifteenth century type, on the face of which was an impression of the side of an individual type which had drawn out, and was shown as illustrating an important point in the formation of the type itself, and showed, the lecturer said, very little difference between the type of that day and the type of to-day. This was followed by an example of the use of roman type by Pynson in 1518, printed in this country, though he first used it in 1509, showing that roman type arrived very late in England.

There was a movement for reducing the size of books early in the sixteenth century, they having previously been very large. Gothic type did not lend itself to reduction, and so there was a demand for a new type in which small books could be printed. Aldus then invented an entirely new type that was not based on anything that had been used in producing manuscripts or any type form previously. In this way italic was introduced by Aldus, and incidentally it became the rage for printing the classics. It was copied by nearly every typefounder in Europe. Aldus obtained a privilege for ten years for the use of this type, and at first it was only used in small books, but larger sizes were occasionally cut.

Dealing with the so-called "learned types," Mr. Peddie stated that Arabic type was introduced in 1514, Ethiopic type being said to have been cut a year previously. Anglo-Saxon type was first cut by John Day, the famous printer of London, at the request of Archbishop Parker of Canterbury, one of those patrons of printing, remarked the lecturer, whom we felt the want of in these days. From 1567-74 John Day printed several books in the house of the Archbishop in Anglo-Saxon type. Irish type we owe to another benefactor of printing—Queen Elizabeth, who had a fount of this type cut in 1571, and it has a very strong family resemblance to Anglo-Saxon type. Armenian type was first shown in 1591.

On the subject of book illustration, the lecturer said there was very little colour printing for a considerable number of years. The latter part of the fifteenth century showed practically none. Most book illustration of this period was simply ordinary wood-cut printing or illustrations cut in relief on soft metal. The first great change occurred in Italy in the invention of a process by which various coloured blocks were used in order to tint wood-cuts. Another colour process used was stencilling, though more for separate wood engravings than for book illustrations. Indeed Mr. Peddie said he might sum up the history of colour printing in the sixteenth century by saying there was not any. The case of a famous English printer who had a thorough knowledge of his trade was produced by John Day, who was not only the manufacturer of the punches he used, but also cut his blocks to illustrate his books. Copperplate engraving arrived about a century later in England than in any other country, as the earliest specimen of copperplate work was dated 1540.

After some remarks on the title page, which at the end of the fifteenth century had not come into its own, but before the sixteenth century was very old had come to stay, and on the great advance that took place in music printing about the middle of the sixteenth century, Mr. Peddie passed on to the handpress. The first important improvements were the hinged tympan and the introduction of the mechanism which took the carriage out and in. Then about 1550 the iron screw and the frisket were introduced. In that condition the handpress remained up to the year 1800 almost without alteration.

In the concluding part of his lecture Mr. Peddie spoke of the physical progress of printing during the sixteenth century. During the first twenty years of that century twenty-two towns in Germany that had no printing press during the fifteenth century started printing. In Italy, during the whole of the sixteenth century, one hundred towns started the art of printing. While printing in London dates from 1477, provincial printing in England is a very different story. York was the first provincial city to start printing, it being introduced there in 1509. Oxford was second, a new press being started there in 1517, the fifteenth century one having long since stopped. Printing started in Cambridge in 1521; in Tavistock in 1525; in Abingdon in 1528; and in St. Albans (also a second attempt) in 1534. There is a doubtful case of printing in Bristol in 1546; in Ipswich printing started in 1547; in Worcester in 1548; in Canterbury in 1549; and in Norwich in 1556. The charter of the Stationers' Company was granted in 1557, which put a check on the energy of the printing press, but there was a private press in Lambeth in 1572, another in Wandsworth, and another at Green-street. That was the sum of English provincial printing during the sixteenth century. Most of these towns only had single presses, and produced only a few books. Turning to the Continent, we found that in Poland there were more presses in the sixteenth century than there were in England during the sixteenth and seventeenth centuries put together. The press also showed a great advance in many other countries, such as Portugal, Spain, Constantinople, Greece, etc. It was not till the eighteenth century that we got a real advance in English printing.

Several questions were put to the lecturer at the close, and satisfactorily answered, and the crowding round the table bearing the chronologically arranged sixteenth century printed books showed the keen interest that the lecture had awakened. Next Monday Mr. Peddie will deal with the seventeenth century, bringing in review illustration in France, the growth of the pamphlet and the first newspaper, and the further improvement of the printing press.

DURING last year, 5,225 persons engaged in the printing and allied trades had their wages increased by a gross total of £361 per week. In 1911, 4,904 persons had increases but as the total amounted to £456 a week, the "rises" were apparently on a more substantial scale.

THE Board of Trade Labour Exchanges, during the five weeks ended December 27th, received 1,081 applications for employment in the printing, stationery, paper and book trades, of which 788 were from women. However, only 1,106 vacancies in those trades were notified during the period in question, 696 of which were for women. The number of vacancies actually filled by the Exchanges during those five weeks was 848, of which 29 were only temporary. Of the total number, 574 places were taken by women. In the juvenile branch, 633 vacancies were notified, 417 of them for girls, and 490 were filled, only 135 of which were taken by boys.

The Hardest Job.

Writing in the *American Printer*, Mr. James F. Tobin says that the hardest job in an engraving house is not, as might be supposed, the turning out of a complicated piece of four-colour work from copy in one colour, with double printing and other nerve-racking complications, but having sand enough to turn down an order if the particular requirements as to time or finish are not within our power. Memory harkens back readily to the time when an engraver's promise was worse even than a printer's, and that's going some. One of the pioneers in the business had a habit of evading promises as to time somewhat after this fashion: The customer would insist that the work be delivered Monday without fail. After volubly and with many gesticulations assuring him that it could not be done, and being met with the threat to take the order elsewhere, the engraver would shrug his shoulders and apparently capitulate. Showing the customer to the door he would smilingly say, "All right, we shall have it done, never fear. It will be delivered (noise of closing door) next Wednesday." When the inevitable kick came he would appeal to the office force with tears in his voice whether he had not said "Wednesday," and receive their unanimous verdict that he had.

This method is obsolete nowadays. It belongs to the period when an artist was regarded as incompetent if he was sober and sane. The modern preaching of "Service" has taught engravers the futility of deliberately making false promises. The sins in that direction which are committed now are not due to any other cause so much as lack of nerve.

When a customer turns up with a desirable order at a good price and insists it must be done within a given time, the engraver knows whether he can do it or not. If he cannot, it is up to him to say so. No evasion. No phrasing his answer so that the customer goes away with the idea that the work was promised at the desired time, when it was not.

And, furthermore, the one making the promise should know whether the plant is filled to capacity or not. If there is sufficient business on hand to occupy time for six days, and the prospective order will take two for completion, it will not do to promise it even eight days thereafter. Don't trust to luck to pull through. The only kind of luck that's likely to affect the progress of the order will most probably affect it adversely.

The only safe and sane way to promise work is to know when it can be produced and extend the time in naming a date for delivery. A customer is charmed when the date is anticipated and the engraver is damned when it is subsequent. And it is surprising how few times it is really necessary to have the work finished at the time first demanded by the customer. More often it is simply an arbitrary date when he thinks he would like to have it.

Most men are reasonable, and an intelligent explanation as to why the order cannot be filled sooner, coupled with a little quality talk, will land the order on the engraver's estimated time.

Trade Notes.

MR. JOHN WALTER has consented to preside at the 86th Anniversary Festival of the Printers' Pension Corporation, to be held at the Connaught Rooms on May 28th.

FOR printing the annual reports for one, three, or five years, for the Poplar Borough Council, the tender of Messrs. F. Tarrant and Co., Ltd., Camberwell, has been accepted.

TENDERS are wanted for the supply of school books, apparatus, stationery, and furniture, for the Worcestershire County Council Education Committee. Particulars from the Director of Education, County Education Office, 37, Foregate-street, Worcester.

THE annual dinner of the Edinburgh and East of Scotland District of the Institute of Journalists was held in the Carlton Hotel on Saturday evening. Mr. J. B. Mackie, Dunfermline, the chairman of the district, presided, and there was a company of about 50 present.

SCOTTISH PRINTERS' DISPUTE.—A conference was held last week between representatives of the Master Printers' Association and the Scottish Alliance of Master Printers and the Scottish Typographical Association with reference to the present dispute in the trade. The proceedings, which were conducted in private, lasted over seven hours. It was officially reported that the conference had been adjourned for a fortnight.

THE annual dinner of the Glasgow and West of Scotland District of the Institute of Journalists was held on Saturday evening. Mr. Israel Crone, chairman of the district, presided, and among others present were Mr. Robert Donald, President of the Institute; Sir John Ure Primrose, Dr. Charles Russell, Mr. James Lumsden, ex-Bailie J. C. King, Mr. William Stewart, Mr. George Farquhar, Mr. William Guthrie, Mr. David Welch, and Mr. Gardner Blair.

ST. BARTHOLOMEW'S HOSPITAL.—Mr. Edwin J. Layton, the Honorary Secretary of the Appeal Committee, gratefully acknowledges the following donations amongst others:—Messrs. Blades, East and Blades, £100; Mr. Arthur S. Bowlby, £100; Sir Everard Hambro, £100; The Trustees and Managers of the Stock Exchange, £52 10s.; and annual subscriptions of £100 from Colonel Stephenson R. Clarke; of £50 from Mr. J. Horsley Palmer and Mr. Henry L. Hopkinson.

MESSRS. B. WINSTONE AND SONS, LTD., 100-101, Shoe-lane, E.C., have issued a specimen book of their relief-stamping inks in which examples of the many colours stocked are shown, each colour actually worked on a die-stamped letter heading that shows well the fine effects to be obtained from the use of these inks, which possess the advantage of being mixed ready for immediate use. A wide range of colours is always ready for delivery, and samples will be sent free to any member of the trade who may desire to test their excellent qualities.

MR. JUSTICE KENNY at Dublin has been hearing an action in which three men, two of whom belong to the priesthood, are seeking to obtain damages from the *Belfast Evening Telegraph* for alleged libel. The plaintiffs, as the promoters of a fund started to relieve distressed Roman Catholics and others thrown out of employment by the disturbance in Belfast last summer, complain that the paper published an article in which they allege reflections were made upon their conduct. The case, after several days' hearing, has been again adjourned.

AT the annual meeting of the Dublin and Irish Association District of the Institute of Journalists, held on Saturday afternoon, Mr. W. Stewart, chairman, presiding, the report which was submitted for the past year disclosed a useful record of work, and the treasurer's report showed that the District was in a sound financial position. The following were elected officers of the Association for the ensuing year:—Chairman, Mr. E. Tuohy, Cork; vice-president, Mr. T. A. Stoddart; hon. treasurer, Mr. T. W. Murphy; hon. secretary, Mr. Gerald Harris. The annual dinner was held in the evening at the Dolphin Hotel. There was a large gathering of members.

MESSRS. THORBURN, BAIN AND CO., LTD., the Broadwall Envelope Factory, Stamford-street, S.E., are sending out sample sets of bag-shape envelopes in many sizes and qualities, a number of additions to stock sizes having been made since the issue of the previous sample sets, some months ago, and the selection is now one that should provide for every requirement on the part of the customer. The firm makes a feature of very prompt delivery. A trade price list accompanies the samples and the terms allow of a profitable trade being done by the stationer or printer who can take orders.

THE late Mr. William Flavelle Moneypenny, a director of the *Times* Publishing Co. from 1893 to 1890, and editor of the *Johannesburg Star*, has left estate of the value of £175.

THE death occurred on Saturday of Mr. Wellwood Anderson, bookseller, Dumfries, in his eighty-fourth year. Mr. Anderson had carried on the business founded by his father in 1818.

FOR printing and binding 1,000 copies of a supplementary catalogue of books in the central library, for the Corporation of East Ham, the tender of Messrs. Horsley Bros. has been accepted.

THE editorial and reporting staffs of four large Jewish daily newspapers in New York have gone on strike, under orders from the Newspaper Writers' Union. The Union's demands are that non-union men shall not be employed, and that the minimum wage shall be $25 per week.

THE trustees and council of the Printers' Pension, Almshouse and Orphan Asylum Corporation acknowledge a further contribution of 20 guineas from Sir G. Wyatt Truscott, Bart. Donations and subscriptions are urgently needed to relieve aged printers or their widows.

THE death is announced of Mr. Robert Williams, journalist, formerly of Carnarvon and Liverpool. Mr. Williams founded the *Welsh Coast Pioneer*, with its headquarters at Colwyn Bay, and upon severing his connection with the *Pioneer* he entered the employment of Messrs. Birchall, of Liverpool, becoming the first compiler of the "North Wales Year Book" and of several other guides and directories. Latterly he had held an appointment with the *Western Mail*, Cardiff.

"MANUFACTURING IN PHILADELPHIA" is the title of a book issued by the Philadelphia Commercial Museum, and written by Mr. John J. McFarlane, A.M., the librarian and statistician of that institution. It gives an account of the rise and progress of the industries of the city, and is illustrated with half-tone reproductions of many of the works and factories that are referred to in the text, including an interesting view of Benjamin Franklin's little printing shop—1728. Neatly bound the book forms an instructive and interesting souvenir of Philadelphia.

A BOOKLET descriptive of the "L. and M." Automatic Metal Furnace is issued by Messrs. Linotype and Machinery, Ltd., 188-189, Fleet-street, E.C., in which is given a description of this compact machine for remelting and casting into ingots metal for composing and typecasting machines, and yielding a perfectly clean ingot free from dirt and dross and thoroughly well mixed. This furnace embodies many improvements and saves time, space, labour, metal and gas, while at the same time doing away with fumes and smoke.

REFERRING to the important statements by the London correspondent of the Birmingham *Daily Post* on the subject of the crisis in the Tariff Reform party, a writer in the *Star* says that Mr. A. F. Robbins has recently completed 25 years' service as the London correspondent of that important journal: "He is now the doyen of London correspondents for daily newspapers in Great Britain, for Sir Henry Lucy is no longer in that category. In regard to Ireland he is beaten by Mr. A. B. Waller, who has been London correspondent of the Belfast *Northern Whig* somewhat longer, as M. Paul Villars has also for the *Journal des Débats*. In respect to the earliest (as distinguished from the earliest continuous) London letter, Mr. Robbins can perhaps still claim the record, for his first effort in this kind was written in 1873.

"EXPERT SERVICE."—The services of an expert adviser have so often proved of great value at a critical period that it is matter for surprise that an increasing demand has not created a correspondingly large supply. Mr. W. H. Burchell, governing director of the Caxton Press, Ltd., a founder of two important institutions in the printing and allied trades, an author of many essays on technical matters associated with the printing industry, and with a varied experience extending over 40 years, is determined to awaken the latent demand by arranging a supply of experts available for every branch of the printing and kindred trades, for law cases, arbitrations, disputes, etc., under the title, "Burchell's 'Expert Service.'" He offers to provide a consulting expert for firms and institutions desirous of installing printing plants, etc.; to supply detailed estimates for work in dispute; to compile and price schedules for private firms, Borough Councils and other public bodies; to examine and report upon inventories of valuations, and in fact to give advice and offer suggestions by post or by personal interview on any matter connected with these industries. It is a responsible undertaking, but it could hardly be in the hands of a more experienced or more energetic man than Mr. Burchell.

SPEAKING at the dinner of the British International Association of Journalists, the other night, Mr. Sydney Buxton said that it was a solemn thought that while there was a certain amount of brains connected with journalism and a great deal of enterprise, the bottom basis of the whole was wood pulp. Forests fell that journalists might live. He was not quite sure whether it was the newspapers that made the sensations, or whether it was the sensations that made the newspapers.

City of London Printers' Musical SOCIETY.

The fourth concert of the season of the above society was held on Monday at Anderton's Hotel, Fleet-street, E.C., when Mr. Ernest S. Lendrum presided. The chairman was supported by amongst others, Mr. E. W. H. Walker (Walker Bros.), Mr. E. H. Raynham (Messrs. E. Lloyd), Mr. Chas. Allen, Mr. A. Cox, Mr. Wright (*Daily Citizen*), Mr. Harry Hall, Mr. Marshall, Mr. F. Fountain, Mr. J. E. Shaw, Mr. W. Watts, Mr. Geo. Tams, etc. A capital concert was provided by the hon. musical director, Mr. Geo. Jones, the bulk of the entertainment being in the hands of a very talented combination known as "The Sparks," neatly attired in nautical costume, and the whole programme was carried through with that breeziness that one always expects from anything appertaining to "lads in blue." Mr. Rodbourn's bijou orchestra again did excellent service, and the mezzo-soprano voice of Miss Lilian Gordon in quite a variety of numbers was much appreciated. Miss Milicent Spencer, too, proved herself a talented artist, while a capital low comedy sketch was admirably rendered by Miss Elsie Videau. Of the male members of the combination Mr. Chas. Wrangham, the baritone, and Mr. Geo. Hows, a pleasing tenor, both gave ample proof of capable training in their various well rendered songs. The comedy side was in the capable hands of Mr. Harry P. Hayward and Mr. George Ricarde, both of whom are exceedingly talented comedians. Two personal friends of the chairman, Mr. Harry Hall and Mr. Will Edwards, possibly two of the most noted of concert artists, fairly convulsed the audience with their funnyisms, and materially assisted to make the evening the great success it achieved. The plate, on behalf of the Printers' Pension, Almshouse and Orphan Corporation, realised over £50, and in reply to a hearty vote of thanks aptly moved by Mr. Geo. Tams, and seconded by Mr. W. Watts, Mr. Lendrum expressed pleasure at the success of his efforts.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

By this time those of us who have received several calendars, have, as our own individual "Hanging Committee," made our choice as to which of them we prefer "to live with."

o o o

I could not bring myself to part company with one obligingly sent me by the Mezzogravure Co., Ltd., of 190, Strand. It is a stout 17 in. by 11 in. card, nearly ⅛ in. thick. The card has a rich brown-yellow surface, bearing in the centre a mounted print of "Le Casque D'Or." It is a very fine specimen of machine printed photgravure. The subject lends itself exceedingly well to the process; the dark shadow of the shield contrasts strikingly with the bright high-lights upon the breast-plate of the knight.

o o o

The Mezzogravure Co., Ltd., have scored very heavily in the finest commercial subjects rendered by machine photogravure; and now specimens of their rendering of figure subjects, not to say classical studies, either in the Process Year Book or by way of this calendar, attest their equal skill in all departments of the art.

Digitized by Google

The calendar comes commended by the most artistic bordering or borderings of olive green and of peacock blue. The whole is subdued, chaste, and perfectly artistic.

o o o

Mr. William Hilton is a candidate for a printer's pension. In other days he has done so much work for the benefit of others in the craft that the opportunity of being a help to him, now that his health has so sadly failed, will be gladly seized by pension subscribers. It is very desirable, however, that he should not merely secure election, but that the vote should be a handsome one, corresponding to the handsomeness of his own benefaction.

o o o

For no less a word than benefactor describes the gifts he has made during many years; considerable gifts in money when all the subscriptions are totalled, and magnificent gifts in kind. The word kind is doubly fitting in the circumstances.

o o o

The Childrens' Party of the Printers' Institute is always a bright function. Unfortunately, I could not attend this year. I should like to bear witness that the Lord mayor, Sir David Burnett, was really unavoidably absent. I daresay his Lordship, being human, is sometimes very glad of a reasonable excuse to get off an engagement, but be that as it may, there actually was an unfortunate illness, and nothing less, which that night kept his Lordship away.

o o o

The programme was quite an entertainment in itself. A dainty little $4\frac{1}{2}$ by $5\frac{3}{4}$ booklet in a light blue embossed cover, printed with dark blue. The twelve inside pages were in rich crimson lake. The portrait of "Clown Dano, the Children's Favourite," and Baby Jumbo, the *Daily Mirror* "Elephant," and of "Flossie, the Educated Dog," with a portrait, too, of Santa Claus, and various picture fantasies brightened the pages. The printers were the Caxton Press, Ltd., of which Mr. W. H. Burchell is controlling director.

o o o

Mr. Job Morriss acted Santa Claus. He goes all out on these, as on so many other occasions. That man does live. There are so many good old vegetables about—so well meaning—such cabbages, with good sound hearts, but such cabbages, that a live man like Morriss is good to encounter for the contrast. The debt of Young Printerdom in particular is by this time a very heavy one to Uncle Job.

o o o

Besides this great impersonation he joined in the Christmas-tree decoration, his coworkers there being with Messrs. E. R. Cook, managing director of Messrs. Badoureau and Jones, and Chairman of the Council of the Institute, Messrs. A. Watts, R. B. Brett, and the hon. secs., Mr. C. J. Drummond and Mr. W. H Burchell.

o o o

One of the most welcome features of the *Imprint* of which the first copy is just before me, is the freedom of its criticism upon specimens of printing under the heading of book notices. There has been over-kindness by certain of the editors of our craft. It has been grieviously mistaken kindness—for it has misled at times instead of educating those who have been so gently dealt with; even so overpraised now again. Those who see their printing trade booklets or other issues reviewed in some trade journals are not accustomed to such comments as I read passed by the editor of the *Imprint*. The victim is a "Reminder" booklet issued by a firm who shall be nameless.

o o o

"The worst traditions of display," says the *Imprint*, "are far from spent—vide the opening of pages 2-3. A small sans on dark green cover paper is almost lost—the wording should be simplified, and the space used to allow of a bolder type. The type of the text has one of the worst qualities of the 'moderns' dazzling contrast of hair lines and thick strokes."

o o o

"How is it that with all the talk of quality and efficiency in printing and advertising, such a publication as this is issued with a serious purpose? Just as every office-boy thinks he can correct printers' proofs, so many business men seem to think they can arrange printing matter—that here experience and training don't count."

o o o

The good sense of the firm thus frankly reproved will assure it of the value of the "faithful wounds of a friend." At the same time the prospect of encountering similar plain speaking, not to say the possibility of finding it directed at oneself, will make the *Imprint* awaited with interest, and perhaps with awe.

o o o

And now what can I say of the *Imprint* itself upon the glance? I am biassed. For as regards these journals I am a subscriber and a suckscriber—drawing some sustenance through a quill, I shall catch it for that; for I see the Editor of the *Imprint* is down on "facetious poetry and insipid puns, irrelevant quotation and tedious smartness."

o o o

Never mind. Let the *Imprint* go on its glorious way, saying rude—and true things—about whatever invites its criticism, and let us say true and even rude things about the *Imprint*.

o o o

That border round the two-line pica quotation from Ruskin, on the first page—I can't honestly say I like it. I've tried to, because the *Imprint* says I am to. But no, the border is not reposeful. It keeps saying to me "stop bothering about Ruskin's words. Who's Ruskin? Look at *me*; at my squares and my dazzle of diamonds and cryptic signs. Look at *me*."

o o o

No, hang it all. Get out. I won't look at you. I want the "quote"; nothing else.

o o o

I'd rather have seen a shaded border; something more subdued and less competitive with the wording. I have just placed white strips over the borders and convinced myself that I would rather the borders had been omitted altogether, than that these borders should have been used as here. Then I have drawn one bold line around, upon the white strips, and I incline to think some slight bordering an improvement.

o o o

The question is what degree of strength and insistence should the border have? The same square print border occurs on the stout cream-tinted cover. It is subdued there by virtue of the materials employed; and there it looks all right.

o o o

Of course we have no medley of types in these pages. The editor and his helpers do undertsand the fundamental canons of good print.

o o o

There is a full page of a Rembrandt machine photogravure "Glad Dawn." It is a fine conception not well realised. The fellow's eyes worry me, this time. I'm not quite easy too as to whether he hasn't sprained the ankle of his right—and his longest—leg rather badly, in which case someone ought to tell him.

o o o

And now enough of the defect. The *Imprint* taken altogether, and with due allowances for starting troubles, is really delightful, a pleasure to handle; a pleasure to the eyes; and a pleasure to the mind; it establishes itself upon the instant as a familiar friend. And some things it says are splendidly worth saying. Particularly at this time when to speak plainly there are so many influences in Printerdom that make for degeneration.

o o o

Not for two hundred years has there been less idealism in printing than there is today.

o o o

Caslon woke up the craft two hundred years ago. So did Baskerville a little later; so did Charles Whittingham the first; so did his Chiswick Press successors; so did Bewick with his wood engravings; so did Pickering; so did John Cassell and Herbert Ingram; all in different but most effectual ways. So did John Francis of the *Athenaeum*, aiding to remove some of the artificial shackles upon print. William Blades too was a tower of strength; and so were William Spottiswoode, and G. A. Spottiswoode in different self expressions. Andrew Tuer was a very useful man, and Robert Hailing, of Cheltenham, with the slightest means attained wonderful results for the exaltation of the printerdom of the whole country.

o o o

These men are all gone. Where are their successors? Men akin to these who pioneered and set up new hopes and aims for the craft while bearing a part in the rough-and-tumble of business life; who were obliged to share its disabilities; who had little or no golden opportunity, save as by transmutation they conjured it into being out of quite ordinary business occasions.

o o o

I feel jealous for the repute of the master printer. Can it be said that through the last half-a-dozen years the name of master printer has been tending to stand for higher and higher value in popular recognition?

o o o

Has the name stood for all the statesmanship it might have represented in the management of business affairs, or in the fostering of goodwill in industrial relations; or even in business success?

o o o

New men are wanted, or better still, old men grown older and wiser, and in that sense new men. New rebukes perhaps; perhaps more notably still, new encouragements? These are wanted.

o o o

Master printers who discover what is best in themselves will discover also what is best in their workers.

o o o

I think Addison Charlesworth has well said that gaining of knowledge of the truth about one's self is a very revealing thing in regard to more than one's self.

o o o

My space is getting full up. By your leave I will come back to the *Imprint* later. Enough just now to give a mention of some of its contents.

o o o

Mr. R. A. Austen-Leigh, a director of Spottiswoode and Co., writes on "The American Way." Or ways. He notes first that American printers seem friendlier to and less distrustful of each other than printers in the United Kingdom.

o o o

But he notes, too, that in America half hours "will be consumed in conversation (helped by cigars) that would not take five minutes over here."

o o o

American printers, he tells us, are enthusiastic, notwithstanding the late bad times, they are optimists; they are fellow lunchers; they specialise to a high degree; they sometimes "pool machinery," so that "all ruling work goes to one house and all perforating to another"; their Indianopolis technical and trade school maintained by the United Typothetæ is doing notable things; and "a special committee" is doing what it can with the apprentice difficulty.

o o o

Why this short article of Mr. Austen-Leigh's is alone worth a year's subscription to the *Imprint*.

o o o

Edward Johnston writes on "Decoration and Its Uses"; and Mr. F. Ernest Jackson on "Lithography." Mr. Joseph Pennell deals with "The Coming Illustration." The illustrated newspaper is going to kill the magazines in his prognostication. His whole article is most informative.

o o o

Mr. Pennell has been a great force behind the scenes in the compilation of many a notable illustrated daily or weekly and he lets us into a good many secrets.

o o o

But now I simply cannot get more time or more room. I must come back to the *Imprint*.

FRANK COLEBROOK.

NEW PAPER MILLS FOR VENEZUELA.—A contract has been entered into between the Government of Venezuela and Manuel Leon Quintero for the establishment of one or more paper mills in the States of Aragua and Carabobo, Venezuela, within a period of one year after the National Congress shall have approved the contract, reports the American chargé d'affaires at Caracas.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Jan. 22nd, 1913.

CREDIT has continued in good demand all this past week, and small amounts had to be borrowed at the Bank of England on Friday and Saturday. Since then supplies have just been sufficient to go round, and money rates are very firm. There is also a firmer tendency in discount rates. Heavy gold withdrawals took place last Thursday, and since then the receipts of bar gold have only slightly exceeded exports, so that the net efflux for the week is only a little reduced, amounting to date to £933,000. The week opened drearily in the Stock Exchange, Balkan politics being a depressing influence, but yesterday the undertone was fairly cheerful. Business, however, remains restricted by political uncertainty. The gilt-edged group is disposed to harden, and Consols are a shade harder, the quotations being 74 1/16 to 75 1/16 for money, and 75 1/16 to 75 3/16 for the account.

The miscellaneous industrial market has been generally characterised as irregular this week. General business remains restricted, and prices as a rule have moved within narrow limits either way. In the section relating to paper and print there have been only two movemenis, a fall of 1/2 in Raphael Tuck and Sons to 7/8—1, last Monday, and a drop of 1/16 in Amalgamated Press Ord. to 3/16—1/16, yesterday. Business has been done during the past seven days in Amalgamated Press Pref. at 21s. 3d., and 21s. 9d.; in Cassell and Co. Ord. at acc. 5, 5 1/32, 5 1/32 and 5 1/8; in Eyre and Spottiswoode Deb. at 85; in *Financial News* Pref. at 14s. 9d.; in *Illustrated London News* and *Sketch* Ord. at 3s. 6d., and in the Pref. at 14s. 6d. and 13s. 6d.; in International Linotype at 80; in Lanston Monotype Corporation at 10s.; in Linotype and Machinery A Deb. at 60; in George Newnes Pref. at 16s.; in Spicer Bros. Pref. at 9 3/8; in *Standard* Newspapers Pref. at 65s.; in Raphael Tuck and Sons Ord. at 19s.; in Waterlow and Sons Pref. Ord. at 12 1/16; and in Weldons Ord. at 33s. 9d., and in the Pref. at 19s. 6d.

DIVIDENDS AND REPORTS.

GEORGE NEWNES, LTD.—An interim dividend at the rate of 10 per cent. per annum on the ordinary shares for the half-year ended December 31st, 1912, has been declared.

RAPHAEL TUCK AND SONS, LTD. — The directors of Raphael Tuck and Sons, Ltd., announce an interim dividend upon the ordinary shares at the rate of 5 per cent. per annum for the six months ended October 31st, 1912.

"FINANCIER AND BULLIONIST." — The directors, in their annual report, state that, including £8,826 13s. 1d. brought forward, the net profits for the year amount to £20,628 9s. 4d. Out of this sum the directors have paid interim dividends of 12½ per cent., and they now recommend the payment of a final dividend of 12½ per cent., making a total distribution for the year of 25 per cent. The balance carried forward amounts to £10,440 19s. 4d., being an increase of £1,544 6s. 3d. on the amount brought forward.

COMPANY NOTICES.

MITCHELL PUBLISHING CO., Ltd.

Notice is given, that a meeting of the members of the company will be held at 4, Eastcheap, E.C., on February 21st, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

ADVERTISING CONCESSIONS (PARENT) CO., Limited.

At a meeting of the company, held at London, on January 2nd, the following resolution was passed: —"That the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily; and that Alexander H. Varnier, of 63, Chancery-lane, W.C., be appointed liquidator for the purposes of such winding-up."

STROUD NEWS, Ltd.

Notice is given, that the creditors (if any) of the company are required, on or before February 15th, to send the particulars of their debts or claims, to Mr. Harry Harmer, Denmark-road, Gloucester, the liquidator of the company.

COMMERCIAL INTELLIGENCE.

Re CHARLES FRANCIS EDWARDS, Printer and Stationer.

This debtor, who carried on business at 11, Cumbergate, Peterborough, came up for his first examination at the Bankruptcy Court the other day. Debtor estimated his assets at £147 7s. 8d., and his liabilities were expected to rank at £126 14s. 1d., leaving a surplus of £20 13s. 7d. He alleged as the cause of his failure "want of capital, lack of trade, court fees, etc." After the examination of the debtor by the official receiver the examination was adjourned until February 7th.

Re EDGAR JAY. Loose-Leaf Ledgers.

The first meeting of creditors was held at the London Bankruptcy Court on Monday, before Mr. W. P. Bowyer, official receiver, under a receiving order against this debtor, who formerly traded at Albion-buildings, Aldersgate-street, E.C., under the style of Edgar and Co. The chairman reported that a statement of affairs had been furnished showing unsecured liabilities, £2,511 8s.; fully secured liabilities, £120; liability on accommodation bills, £169 6s. 3d.; and contingent liabilities, £4,000 (not expected to rank). The total ranking liabilities was returned at £2,680 14s. 3d., and the only asset was the estimated surplus of £630 from the securities in the hands of the fully secured creditors; those securities were valued at £750 and consisted of three patents for a loose-leaf ledger, binder and note-book respectively. According to the debtor's statements when before the examiner he invented and patented in 1907 a letter-book, but it was not a very great success, and having improved it the debtor produced a loose-leaf note-book and subsequently a loose-leaf ledger. He started business in connection with those inventions in 1907 or 1908 at Albion-buildings, without capital, but he borrowed money from time to time, and traded successfully as Elgar and Co. In 1910 he sold the business to Elgar and Co., Ltd., which was formed with a capital of £12,000 to acquire it at the price of £1,000. The debtor was appointed managing director of the company at a weekly salary of £12, subsequently increased to £14, which position he held until July, 1912. A receiver was then appointed on behalf of the debenture holders, and the company soon afterwards went into voluntary liquidation. As managing director the debtor personally guaranteed liabilities and debentures of the company together amounting to £5,000, and in addition he lost all his capital in the business. He attributed his insolvency to loss on the guarantees given on behalf of Elgar and Co., Ltd.; to loss in connection with another business; and to interest on borrowed money. In the absence of any offer the case was left with the official receiver to be wound up in bankruptcy.

Printers' Managers & Overseers ASSOCIATION.

BIRMINGHAM CENTRE.

The fourth annual dinner of the above Centre took place on Saturday, 18th inst., the president (Mr. Henry B. Lane) presiding, and there were present about seventy members and friends, including twenty-nine from Leicester, three from Worcester, and Mr. A. E. Moore (vice-president of the North Midlands Centre), Mr. Jas. E. Mayo (treasurer of Manchester Centre), Mr. Rowley (Parent Association), and Mr. Richard Hancock (Slechford). A capital dinner was served, after which an excellent progamme of songs and toasts was gone through.

Apologies for absence were received from Mr. Riddell (Principal of St. Bride Printing School), Mr. W. H. Dalby (Leeds secretary) and letters were read from London, Liverpool, Edinburgh and Glasgow, giving all good wishes.

In proposing the toast of the Printers' Managers and Overseers Association, MR. RICHARD HANCOCK said it was a great pleasure to be present as a visitor, but he thought he knew less of the Association work than any one else in the room. Notwithstanding the short time he had been acquainted with the Association, he felt that it was doing a very great work, both on its aims of the business and its social side. He had himself a great love for printing, and he claimed that the Baskerville type was the finest fount that was ever struck, and it never ought to have left Birmingham.

In replying to the toast, Mr. A. E. MOORE, of Nottingham, said he felt glad to be present to respond to this important toast. He assured them that it was with the greatest satisfaction that the North Midland Centre, during the ten months of its existence, had achieved such a success. This movement, though modern, represented the controlling powers of the best firms in the country. The voice of Brum. was felt with no uncertain note, when they said, "What I have said I have said." There was much to discuss in the future, and great care should be exercised which way a move was made in the interest of each member of the Association.

Mr. JAS. E. MAYO, Manchester, also replied, and said it was with diffidence that he rose to the toast of the "P. M. and O. A.," as it was his first visit to any Centre, and the first time he had been called upon to make a speech. He expressed his thanks for the way in which the President had received him. He said the Association had done a good work in taking them out of their lonely furrows right into the midst of a spirit of camaraderie. They must thank their London friends for having sown the seeds of the Association, the issue of which was beyond what they had dreamed. It had widened outinto a national Association, and was yearly increasing. The Provincial Centres ought now to have more to say in the management than they had, and the time could not be far distant when this would come about. They ought to have a National Council, consisting of representatives from all Centres, who should draw up rules to meet the needs of to-day. There was little fear of the Provincial Centres breaking away, as they believed that unity was strength. Let them re-organise the Association, taking up the increased subscription and a National Council, and they would then have an organisation both powerful and effective enough to safeguard their interests, and command respect all over the country.

Mr. A. J. ROWLEY, as a London member, but Birmingham reared, proposed the toast of "The Birmingham Centre." He rejoiced to think that the P. M. and O. A. was a wide Association, and capable of doing great work, the fringe of which had only yet been touched. In wishing the Birmingham Centre every success, he pointed out that the debates on subjects connected with the printing world were of the utmost importance. Ingenuity in machinery was all very well, but men must be capable to work such machinery. The duty of members of the P. M. and O. A. was to instruct young printers in the art. He had always taken a keen interest in chemistry, and he found it a great assistance in his business.

Mr. T. S. GRIFFIN, of Leicester, responded on behalf of the Birmingham members in that town. He said they looked upon Birmingham as a great help to them in their daily occupation, and though they were aiming at a centre of their own, he did not like to think that they would be ostracised from Birmingham. They preferred to feel that the link of friendship would continue between them, and any help required would be readily forthcoming. They were hoping in March to welcome the Birmingham and Nottingham members to a smoking concert in that town, when the true hand of fellowship would be extended.

Mr. R. J. RAYBOULD, a member of the Council, on behalf of the Birmingham members, said he thought that in the four years of its existence, the Centre had made great headway, and he knew that the meetings had been of such an educational character, and the outlying policy had been of such value, that they could more fully understand the need of such an association. As Birmingham's motto was "Forward," let them cease to be satisfied, and go forward, determined to achieve the highest attainments for which the Association was organised.

Mr. JOSEPH BAYLIS (Trustee), of Worcester, proposed the toast of "The Visitors and Ladies," coupling with it the names of Mr. J. J. Atkins (President) and Mr. W. S. Walker (Secretary) of the Birmingham Typographical Society, who were present. He was in a happily humorous vein, and fully held the ear of his listeners. Among other things, he compared himself to the lady Jezebel, who had been thrown down three times, for he had been asked to propose this toast three times and had been Vice-President three times. He was pleased to see such a large section of the Leicester members and friends present, and he congratulated them upon making such headway.

Mr. O'ROURKE, a yearly visitor from Worcester, said he felt it a great privilege to respond to the toast. He had thoroughly enjoyed himself, and he felt sure all the visitors had done likewise. He congratulated the Centre on the splendid progress made.

Mr. J. J. ATKINS, on behalf of the Typographical Society, said they could rest assured that both Mr. Walker and himself had spent a pleasant evening. He often had the question put to him: "What is this P.M. and O.A.? Is it antagonistic to our Society?" "No," he answered, "nothing of the kind. It is an organisation with an uphill fight, a body of much importance," and he rejoiced to see an Association of this sort, which could profit socially, and profit intellectually, by discussing difficult problems of the trade, and broadening the minds of both master and man.

The evening concluded with best thanks to the artistes.

The programme was as follows.

Toast, "The King"—The PRESIDENT.

Song ... ... From Oberon ... ...
Mr. ALFRED JONES.

Song ... ... I did not know ... ...
(Encore—I didn't suppose)
Miss DOROTHY HADLEY.

Toast, "The P.M. and O.A."—Mr. RICHARD HANCOCK.

Song ... ... Nirvana ... ...
(Encore—I'll sing thee songs of Araby)
Mr. TOM FIELD.

Humorous Song (Encored) ... ...
Mr. FRANK EVERALL.

Reply—Mr. A. C. MOORE (North Midlands).
Mr. JAS. E. MAYO (Manchester).

Duet ... ... A Night in Venice ... ...
Miss HADLEY and Mr. FIELD.

Toast, "The Birmingham Centre"—Mr. A. J. ROWLEY (London).

Song ... So you want to be a soldier, little man ...
Mr. A. JONES.

Humorous Song (Encored) ... ...
Mr. FRANK EVERALL.

Reply—Mr. T. S. GRIFFIN (Leicester).
Mr. RAYBOULD.

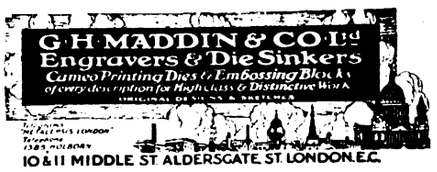
Song ... ... Once again ... ...
Mr. TOM FIELD.

Toast, "The Visitors and Ladies"—Mr JOSEPH BAYLIS.

Song ... ... Because ... ...
Miss DOROTHY HADLEY.

Reply—Mr. O'ROURKE (Worcester).
Mr. J. J. ATKINS (President, Birmingham Typographical Society).

Humorous Song ... ...
Mr. FRANK EVERALL



Duet ... ... The Battle Eve ... ...
Messrs. FIELD and JONES.

GOD SAVE THE KING.

THE Rembrandt Intaglio Printing Co., Ltd., of Lancaster and London (36, Basinghall-street, E.C.), have issued an interesting specimen book, illustrating the possibilities of their well-known photogravure process as applied to the reproduction of all sorts of pictures, oil paintings, wash drawings, photographs, etc., even a line drawing—the famous *Punch* cartoon, "Dropping the Pilot," being included. There seems every reason to believe that in the near future photogravure is destined to hold the same position in the world of illustration that the ordinary half-tone and line processes do to-day, and with infinitely better and more artistic effect. When that time arrives, we have no doubt that the Rembrandt Co.'s process will be one of the most popular of its kind. An excellent example of the work done by it occurs in the frontispiece to our latest printing trade contemporary, the *Imprint*, and those given in the booklet under notice are eminently calculated to demonstrate its beauty and utility, whilst at the same time there is no reason to suppose that, with the exception of the cover design, they were got up solely as "specimens." The firm rightly point out that "photogravure of indifferent quality is not worth paying for," and at the same time mention another and even more obvious fact, *i.e.*, that this beautiful reproductive method is necessarily a little more expensive than the commoner but inferior ones. We should have liked to see some examples of the firm's multi-colour process, but of course this is still more costly, and thus not so much in demand just at present, save for very high-class publications.

THE death has taken place of Mr. J. W. Arrowsmith, of Bristol, a well-known publisher. Among the famous books published by him were J. K. Jerome's "Three Men in a Boat" and Anthony Hope's "Prisoner of Zenda," and "Called Back," by Frederick John Fargus, or "Hugh Conway," of which the sales reached 400,000 copies.

A NEAT calendar for the desk is sent out by Mr. E. A. Braddick, 9, Gough-square, E.C. It consists of a metal stand, on which is fitted loose leaf dates for each day. Each leaf may also be used for memoranda, and an appropriate advertisement of Mr. Braddick's specialities appears in red ink under each date. A most serviceable and neat desk accessory that will keep the firm's name before customers during the whole year.

SPECIAL PREPAID ADVERTISEMENTS.

IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us by the first post on Wednesday to insure insertion the following day.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C.

Situations Vacant.

ARTIST COMPOSITOR wanted; man with original ideas; accustomed to planning out copy and setting; submit specimen of work.—State experience and wages required, to "K.C.," c/o Street's, 30, Cornhill, E.C. 13149

TRAVELLER ON COMMISSION.—An important Manufactory is willing to commit the Sale on Commission of a very remunerative article to a capable Traveller, who is regularly visiting the Printing Offices all over England, Scotland and Ireland; good Commission.—Address, No. 13148, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13148

Machinery and Plant for Sale.

ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos. —Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

Property To Let.

CLERKENWELL.—Warehouses and General Business or Manufacturing Premises to Let. Modern construction and well lighted. Very moderate Rentals.

13 and 15, Little Sutton Street. Floor space about 28,000 sq. ft., would be divided.

11, Little Sutton Street. Floors to Let in this building.

17, Little Sutton Street. Convenient corner premises. Floor space about 3,800 sq. ft.

Apply to Caretaker on the premises, or to Mr. T. W. Blackmore, Old Serjeant's Inn, Chancery-lane, W.C. 13898

Miscellaneous.

WASTE NEWSPAPERS wanted; any quantity up to 100 tons.—Address, C. Longdon, 87, Jamaica-row, Birmingham. 13145

The Condition of the Labour Market

IN THE

PRINTING AND ALLIED TRADES.

HOME.

According to the Labour correspondents of the Board of Trade, whose reports appear in the *Labour Gazette* for the current month, employment was good with letterpress printers during December, and fair with lithographic printers. At the end of the month the percentage of Trade Union members unemployed showed a sensational increase as compared with the end of November. Compared with December, 1911, however, a decrease was shown. (See Table.)

Districts.	No. of Members of Unions at end of December, 1912.	Percentage Unemployed at end of			Increase (+) or Decrease (—) on a	
		Dec., 1912.	Nov., 1912.	Dec., 1911.	Month ago.	Year ago.
London	21,423	7·4	3·8	9·4	+ 3·6	— 2·0
Northern Counties and Yorkshire ...	5,753	3·8	0·9	4·3	+ 2·9	— 0·5
Lancs. and Cheshire	7,253	4·6	3·0	5·2	+ 1·6	— 0·6
East Midland and Eastern Counties ...	2,672	1·6	0·5	3·0	+ 1·1	— 1·4
West Midlands	2,768	2·9	2·0	4·0	+ 0·9	— 1·1
S. and S. W Counties and Wales ...	4,089	3·6	1·4	2·6	+ 2·2	+ 1·0
Scotland	5,235	4·4	2·9	3·3	+ 1·5	+ 1·1
Ireland...	2,551	5·8	5·3	6·7	+ 0·5	— 0·9
United Kingdom	51,744	5·4	2·9	6·3	+ 2·5	— 0·9

In London, employment with letterpress printers was reported as good, rather better than a month ago, and better than a year ago, though at the end of the month a large number of trade union compositors were out of employment. With lithographic printers employment was fair, not so good as a month ago, but better than a year ago.

In other centres, employment continued good generally with letterpress printers and fair with lithographic printers, showing little general change compared with a month ago and a year ago. As usual at this time of the year, however, the percentage of men unemployed increased at the end of the month.

COLONIAL.

There is said to be a good demand for women in printing establishments in New Zealand. In Johannesburg (S. Africa) the printing trade is, however, dull.

FOREIGN.

In France, during November, there was a revival of activity in the printing trades. In Germany, trade was also better, the percentage of unemployed trade unionists in that line, out of a total of 66,276, falling from 6·2 (in October) to 3·6, which is, however, greater than the 2·8 recorded in November, 1911. In Holland, business likewise improved, and accordingly the unemployed percentage decreased from 0·9 (in October) to 0·6, out of a total of 6,434. In November, 1911, there were 1 per cent. out of work.

The Trade of Belfast.

The excellent "Commercial and Financial Review" of Belfast in 1912, published in the *Northern Whig*, has been reprinted in book form, and is an interesting resumé of the trade done in the Ulster capital during the past year. Dealing with the printing and lithographic trades, which are among Belfast's most important industries, the "Review" says:—

"The past year for the firms locally engaged in the printing and lithographic trades has been one of fairly average experience, without any very outstanding periods of depression. Owing to the coal strike in the early months of the year local printers had some difficulty in maintaining their supplies, but the critical time passed over without having any appreciable effect in crippling an industry in which so many flourishing and prosperous Belfast firms are engaged. Subsequently matters assumed a normal state of affairs, and a brisk business was done by the Belfast business houses, not only in Ireland, but with some of the large cross-Channel centres, particularly in the lithographic end of the trade. As compared with other years the output in a variety of departments displays no striking evidence of a backset in the trade. No labour troubles of a serious character have been experienced, though in some instances difficulties requiring adjustment have arisen. These have not, however, assumed such a proportion as to lead to actual friction, and, while an aggressive attitude has not been adopted by either side, a remedial course has been taken when this has been found practicable. Some questions as yet are awaiting adjustment, and it is confidently hoped that a measure of settlement will be arrived at without any serious disturbance to the industry.

"The trade locally for years past has been subject to very few changes except in the respect where the leading firms have been engaged in extending their departments. In letterpress printing the year has been a normal one as regards the volume of business done, while bookbinding and lithographic work has been steadily going ahead in a manner which augurs well for future extension in these departments. It is gratifying to record the fact that in lithographic work appreciation of what can now be done by Belfast firms is growing more widespread every year, and an enormous volume of business has been done with cross-Channel firms during the past twelve months, while local products have been turned out with a finish and artistic ability calculated to increase their popularity in comparison with those from centres where less attention has been given to detail. There have been several extensions of premises during the year, notably that of Messrs. David Allen and Sons, Ltd., whose new offices and stores were completed in June. In their lithographic department the year for the firm has been a very busy one, business with regard to posters and cartoons maintaining the high average of the previous year.

"Amongst other matters the Insurance Act engaged the attention during the year of the master printers, and a society was formed to enable those of their workers to join who were not attached to other organisations of the kind.

"Coming up to the end of the year there has been no sign of a serious falling off in trade, and in the opinion of those qualified to judge the prospects for the ensuing twelve months are very encouraging."

The L.S.C. Jobbing Guild.

Craftsmen as Successful Designers.

Members of the above association met at headquarters, 7–9, St. Bride-street, on Thursday, 16th inst., with Mr. E. C. Moyce (vice-president) in the chair.

In order to carry out the suggestions made by numerous supporters of the Guild, it was decided to devote the evening especially to designing. Before starting on this new departure, it was mentioned that no member had previously been acquainted with the text of the printed slips which were handed round, and read as follows:—

COMPETITION No. 16.—Forty-five minutes is allowed to sketch out an idea for a Quarto Letter Heading on any subject and for anybody. Each competitor has to originate his own copy—the nature of subject is entirely optional. The subject chosen may be treated in any manner and style; but an explanatory note must be added at foot of design should special treatment be required. Prizes for best suggestions were offered as follows:—First prize, value 10s. 6d., presented by Mr. Geo. E. Hart; second prize, value 7s. 6d., presented by Mr. R. Bruce-Hardie; third prize, bound volume of the *British Printer*, presented by the Editor.

COMPETITION No. 17.—Forty-five minutes is allowed to sketch out an idea for an Octavo Announcement on any subject and for anybody. Conditions were the same as in Competition No. 16. Prizes for best suggestions were offered as follows:—First prize, 12-inch German silver composing stick; second prize, 8-inch ditto; third prize, 6-inch ditto. These prizes are presented by Messrs. Wm. Pye and Son, 16–17, Clerkenwell-close, E.C.

The two following gentlemen consented to act as judges:—Mr. E. C. Moyce, secretary of the Printers' Managers and Overseers Association; Mr. Jas. Dyer, London representative of Messrs. Stephenson, Blake and Co. Both competitions took place and judges' awards were announced before the close of the meeting.

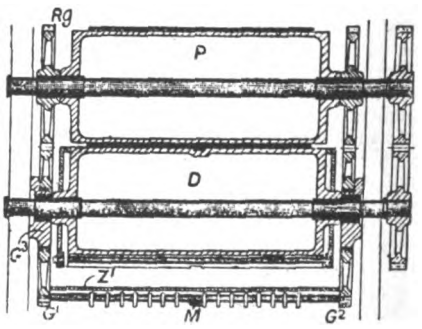
While Competition No. 17 was in progress, the judges, Mr. Moyce and Mr. Riddell (of St. Bride Institute, who kindly undertook the task in the unavoidable absence of Mr. Dyer), made their decision of No. 16.

At the close the adjudicators' award was as follows:—

COMPETITION No. 16.

(1) Nom-de-plume—"Bac," C. A. BURRIDGE.
(2) Nom-de-plume—"Schoeffer," E. G. STRONG.
(3) Nom-de-plume—"Fratres," R. WILLIAMS.

COMPETITION No. 17.



*(1) Nom-de-plume—"Bac," C. A. BURRIDGE.
(2) Nom-de-plume—"Portland," W. A. STONE.
(3) Nom-de-plume—"Sullivan," A. JOSEPH.
(4) Nom-de-plume—Schoeffer," E. G. STRONG.

The judges' remarks on the whole collection of designs submitted was something for the competitors to be highly proud of, and certainly should encourage them to accept the advice of "trying again, and to do one better in the future contests."

*** According to rule of Competitions of the Guild, "no member can take more than one first prize and two other prizes during the financial year." Therefore Mr. Burridge kindly consented to take first in No. 16; and the second, third and fourth in Competition No. 17 became first, second and third respectively.**

Gripper Mechanism.

Messrs. Koenig and Bauer have patented a multi-colour rotary machine of the kind in which the sheets are carried by a gripper cylinder eccentric to the impression cylinder, the gripper cylinder being fitted with one more set of grippers than the number of printing surfaces, and being arranged to revolve on fixed circular projections which surround eccentrically the shaft of the impression cylinder, is constructed with a ring

secured in the central plane of the gripper cylinder to form a bearing strip against which the sheets are pressed by blanks or the like, so that the sheets are guided correctly through the machine. As shown, a form cylinder P, Fig. 2, fitted with four printing surfaces is fitted with gears R*g* which drive two toothed wheels G^1, G^2 connected by transverse bars Z^1, etc., which form the fixed members of five sets of grippers. The wheels G^1, G^2 rotate on fixed projections G^3, which are eccentric to the impression cylinder D, and a ring M fixed centrally between the wheels G^1, G^2 serves in conjunction with bands, etc., to support the sheets. Bearing rails on which the sheets slide may be used for this purpose.

Printers' Managers and Overseers ASSOCIATION.

LIVERPOOL AND DISTRICT CENTRE.

The first meeting of the New Year was held at the Hanover Hotel, Hanover-street, Liverpool, with the President (Mr. Harry Firth) in the chair. Mr. Thistlethwaite was elected to membership. Following the usual routine business a most successful Bohemian concert was held under the direction of Mr. J. E. Wilson, in which a number of well-known ladies and gentlemen took part. The following is the musical programme :—

Pianoforte Solo ... ...
Mr. A. W. LOCKE.
Song ... ... Love is a Dream ... ...
Mr. GEORGE THOMAS.
Song ... Oh! Hear the Wild Winds Blow ... ...
Mr. ROBT. ROBERTS.
Song ... ... Il Bacio ... ...
(Encore, The King's Own.)
Miss LILY HARRISON.
Humorous Monologue Mr. Blobson ... ...
Mr. FOX.
Song ... ... An Evening Song ... ...
Mr. JAMES WILLIAMS.
Song ... ... Carmena ... ...
(Encore, Dusk and Shadows.)
Madame MILLER.
Humorous Song A Merry Christmas and a Happy New Year
(Encore, Sketch—Carbonora.)
Mr. GWILYM MILLS.

INTERVAL.

Glee ... ... Comrades Song of Hope. ... ...
TEMPLE GLEE PARTY.
Duet ... ... Awake ... ...
(Encored.)
Madame MILLER and Miss HARRISON.
Humorous Sketch German on the Telephone ...
Mr. FOX.
Song ... ... Good-bye ... ...
(Encored.)
Madame MILLER.
Glee ... How Can I Bear to Leave Thee ... ...
TEMPLE GLEE PARTY.
Song ... ... Flower Song ... ...
(Encore, Remembrance.)
Miss LILY HARRISON.
Humorous Song When I was a Boy at School ...
(Encore, Imitation.)
Mr. GWILYM MILLS.

AULD LANG SYNE and GOD SAVE THE KING.

Accompanist—Mr. A. W. Locke.
Stewards—Messrs. Hannah, Livie, Edwards and Wilson.

Every item was most creditably rendered, but special praise is due to Miss Lily Harrison for her rendering of "Il Bacio" and "The Flower Song," and also Madame Miller, whose voice was heard to great advantage in her several items. A word of praise is also due to Mr. Gwilym Mills, whose humorous items were greatly appreciated. A hearty vote of thanks was passed to the artistes on the motion of Mr. W. Stephenson, seconded by Mr. Jas. N. Poole, and a special compliment was paid to Mr. G. Thomas for his efforts in providing such a galaxy of talent.

The Royal Tradesmen.

The annual list of houses holding Warrants of Appointment in the various departments of the Royal household, appeared in the *London Gazette* for the 3rd inst. The following are the firms connected with paper and print:

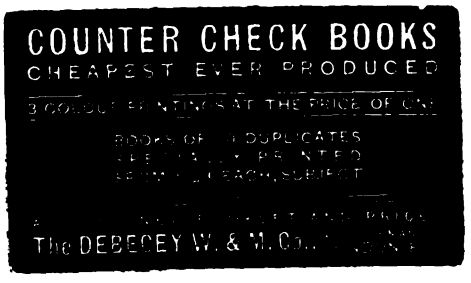
List of tradesmen who hold Warrants of Appointment to His Majesty King George V., from the Keeper of the Privy Purse, with authority to use the Royal Arms. These Warrants do not carry the right to fly the Royal Standard, or to the use of the word "Royal":—

Charpentier and Co., booksellers, Portsmouth.
Harrison and Sons, booksellers and printers, London.
Hatchard and Co., booksellers, London.
Henningham and Hollis, stationers, London.
Zaehnsdorff, Joseph, bookbinder and bookseller, London.

List of tradesmen who hold Warrants of Appointment to Her Majesty The Queen, with authority to use the Royal Arms. These Warrants do not carry the right to fly the Royal Standard, or to use the word "Royal":—

Blackford, O., printer, Truro.
Edwards and Sons, stationers, London.
Fine Art Society, printsellers, London.
Graves and Co., Ltd., fine art dealers, London.
Hatchard and Co., booksellers, London.
Macmichael, Arthur, stationer, London.
Taylor and Henderson, lithographers and printers, Aberdeen.
Tuck, Raphael and Sons, Ltd., fine art publishers, London.

List of tradesmen who hold Warrants of Appointment to His Majesty King George V., from the Lord Steward, with authority to use the Royal Arms. These Warrants do not carry the right to fly the Royal Standard, or to use the word "Royal":—



Caldwell Bros., stationery, Edinburgh.
Kelly's Directories, Ltd., directories, London.
Mansell, Hunt, Catty and Co., Ltd., paper table decorations, London.
Roberts, Henry, stationery, London.
Wise, H. and Co., post office directories, Australia and New Zealand.

List of tradesmen in the Lord Steward's Department having authority to use the Royal Arms and to style themselves "By Appointment to the late Queen Victoria," but not to fly the Royal Standard or to use the word "Royal":—

Bignell, John, stationery, London.
Clarke, M. E., printer, Cowes, Isle of Wight.
Waller and Co., printers and stationers, Dublin.
Willmore and Scott, stationers, Windsor.

List of tradesmen who hold Warrants of Appointment to His Majesty the King from the Lord Chamberlain, with authority to display the Royal Arms. These warrants do not carry the right to fly the Royal Standard, or to use the word "Royal":—

Agnew and Sons, fine art publishers, London.
Anderson, Arthur, stationer, York.
Berlin Photographic Co., fine art publishers, London.
Blackford, Oscar, printer, Truro.
Brodie, Robt., stationer, printer and lithographer, Windsor.
Bumpus, John and E., Ltd., booksellers, London.
Colnaghi and Co., printsellers and publishers, London.
De la Rue and Co., Ltd., manufacturers of playing cards, London.
Doig, Wilson and Wheatley, printsellers and publishers, Edinburgh.
Doig and Co., William, publishers, London.
The Edinburgh Press, printers, Edinburgh.
Fine Art Society, publishers, London.
Flint and Co., R., stationers, London.
Goupil and Co., fine art publishers, London.
Graves and Co., Henry, publishers and printsellers, London.
Hazell, Watson and Viney, Ltd., printers, London.

Jarrold and Sons, stationers, Norwich.
Leggatt Bros., printsellers, London.
Maclehose and Sons, James, publishers and booksellers, Glasgow.
Macmichael, A., stationer, London.
Marshall, E., stationer and printer, Windsor.
May and Williams, newsagents, London.
Miles and Co., printers, London.
Mitchell, John, steel pen manufacturer, Birmingham.
Mitchell, William (Pens), steel pen manufacturer, London.
New, George, bookbinder, Eton.
Ritchie and Son, Alex., printers and lithographers, Edinburgh.
Rivière and Son, R., bookbinders, London.
Rodman, William and Co., stationers, Belfast.
Russell and Co., James, music sellers and publishers, Oxford.
Skeffington and Son, publishers, London.
Sotheran and Co., H., booksellers and bookbinders, London.
Straker and Sons, Samuel, account book makers, London.
Street and Co., Ltd., G., newsagents, London.
Taylor, F. S., stationer, King's Lynn.
Taylor and Henderson, stationers and printers, Aberdeen.
Thacker, Spink and Co., booksellers, printers and stationers, Calcutta.
Thew and Sons, stationers, King's Lynn.
Tuck and Sons, Ltd., Raphael, fine art publishers, London.
Vacher and Sons, stationers, London.
Yelf Bros., printers, Newport, Isle of Wight.

List of firms entitled to style themselves "By appointment to the late King Edward," entitling them to display the Royal Arms, but *not* to fly the Royal Standard, or to use the word "Royal":—

Fazakerley, John, bookbinder, Liverpool.
Hughes and Harber, Ltd., printers, Longton.
Maclure and Co., lithographers and draftsmen, London.
Massey, Ltd., H. and M., bookbinders, London.
Schott and Co., music publishers, London.

List of firms permitted to style themselves "By Appointment to the late Queen Victoria," entitling them to display the Royal Arms, but *not* to fly the Royal Standard, or to use the word "Royal":—

Abel and Sons, booksellers, Northampton.
Butterworth and Co., law publishers, Liverpool.
Galt and Co., booksellers, Manchester.
Griffin and Co., booksellers, Portsmouth.
Gubbins, W. J., bookseller, Cowes, Isle of Wight.
Hare, Haydon, publisher, Scarborough.
Henderson and Bissett, bookbinders, Edinburgh.
Hyde and Co., stationers and sealing wax manufacturers, London.
Johnston, W. and A. K., engravers, Edinburgh.
Jones, Miss M., stationer and bookseller, Cowes, Isle of Wight.
Mendoza, Isaac P., art printseller and publisher, London.
Miller and Richard, typefounders, Edinburgh.
Paton and Sons, H., publishers and printers, Edinburgh.
Siegle, August, bookseller, London.
Smith and Son, Lewis, booksellers and stationers, Aberdeen.
Walker and Co., J., colour printers, Dublin.

List of tradesmen who hold Warrants of Appointment to Queen Alexandra from the Lord Chamberlain to Her Majesty, with authority to use Her Majesty's Arms. These Warrants do not carry the right to fly Her Majesty's Standard, or to use the word "Royal":—

Ackermann and Son, Arthur, printsellers, London.
Edwards and Sons, stationers, London.
Fine Art Society, Ltd., printsellers, London.
Gregory, G., booksellers, Bath.
Hammond and Co., A., music publishers, London.
Höst and Son, A. F., librarians, Copenhagen.
Macmichael, Arthur, stationer, London.
Marks, Lionel, fine art publisher, London.
Rivière and Son, R., bookbinders, London.
Rolandi's Foreign Library, foreign librarians, London.
Webster and Co., A., stationers, London.

List of tradesmen who hold Warrants of Appointment to Queen Alexandra from the Comptroller to Her Majesty, with authority to use Her Majesty's Arms. These Warrants do not carry the right to fly Her Majesty's Standard, or to use the word "Royal":—

Harrison and Sons, printers, London.
May and Williams, newsagents, London.
Street, G. and Co., Ltd., newsagents, London.
Taylor and Henderson, printers, Aberdeen.
Tuck, Raphael and Sons, Ltd., art publishers, London.
Wickwar and Co, manufacturing stationers, London.

EPITOME OF NEW PATENTS.

Copyright Compilation for the BRITISH AND COLONIAL PRINTER AND STATIONER. Further information concerning the following Patents may be obtained by Subscribers upon application to the Editor. Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be Endorsed "PATENT DEPARTMENT," Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London. Telegrams:—"STONHILL, London."

The Editor does not necessarily endorse the statements contained in the following abstract of specifications, which are condensed from official documents. He holds himself responsible only for the criticisms and explanation which is considered desirable in regard to certain of the Patents.

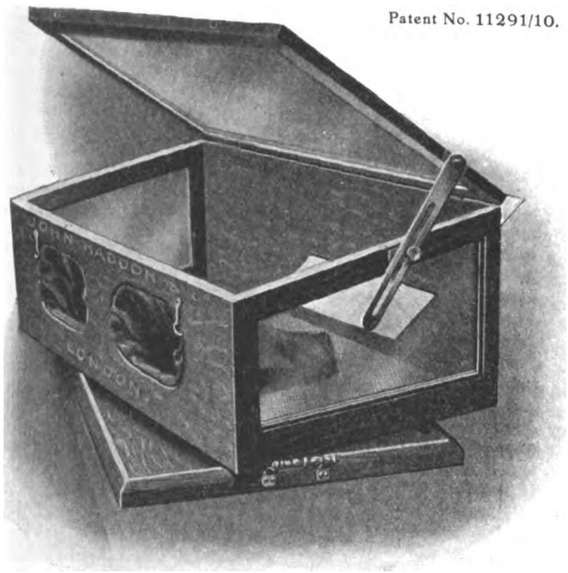
15,397 (1910).—**Improvements in or relating to Mechanism for Feeding Sheets of Material into Printing and other Machines.**—GEORGE W. JONES and WILLIAM MATHEWS (England). Accepted June 15th, 1911.

Relates more particularly to feed mechanism for printing, ruling, folding, lithographic and like machines. The invention consists in a device for feeding sheets of material into a machine or the like comprising tape-drive mechanism and means for lifting the material out of contact with the tapes at a predetermined point or points, with or without means adapted to positively engage the material when lifted from the tapes, and to definitely position its rear end. In other words, the invention consists of means for easing the contact between the tapes and the material at one or more points with or without means independent of the tapes for positively moving the material up to the front lay or stop.

16,155 (1910).—**Improvements in and relating to Printing Machines.** — THE AMALGAMATED PRESS, LTD., and SIDNEY C. DAVIS (England). Accepted May 25th, 1911.

More particularly relates to flat bed printing machines, its object being to provide means whereby the tray which receives the printed sheets as they leave the machine can be moved from the delivery board when fully loaded, and replaced by an empty tray to receive the work, without stopping the machine to effect the change of trays. A device is provided of such a character that two trays can be placed against each other and in the same horizontal plane or approximately so, so that one tray is receiving the work from the printing machine whilst the other remains idle, the latter being brought into the position occupied by the receiving tray when the receiving tray is to be removed from the machine. It returns to its original position without movement of the tray that occupies the receiving position. The movement of the device takes place without the necessity of stopping the machine.

18,067 (1910).—**Improvements in Paper Feeding Mechanism.**—GILBERT L. WARREN (England). Accepted June 21st, 1911.



The object of this invention is to ensure that the top sheet will be separated from the pile, and alone fed forward to the tapes, and without being creased; to ensure that any accidental kinking in the front edge of each sheet will be smoothed out before the sheet is taken by the tapes; and to so raise the top sheet from the pile as to avoid sliding between it and the next sheet, and thereby to prevent smudging when partly printed sheets are to be fed. Another object is to facilitate adjustment of the feeding mechanism to suit sheets of different sizes. The invention consists in adapting one or more rollers fitted with suction nozzles to roll backwardly from the edge of the pile and slightly in an upward direction, so as to roll back the top sheet and simultaneously raise it from the pile, and in directing a blast of compressed air on to the suction rollers about tangentially thereto, so as to complete the separation of the top sheet from the pile before it is fed, the rollers making sufficient travel to pass the edge of the sheet to tapes and top wheels, which thereupon feed it to the printing or other machine.

THE calendar advertising the business of Jas. Broadley, Ltd., letterpress and lithographic printers, Gutenberg Works, Accrington, is formed of large tear-off sheets, one for each month, with the dates in bold white figures on a deep blue ground, the tops of the sheets containing the firm's announcements printed in colours. Accompanying the calendar is a portfolio of specimens of work done by the firm, many of the examples being printed in colours, and the whole showing the high standard that is associated with the firm's name. Some desk blotters, too, are excellent productions and attractive as advertisements.

Safety Bronzing Cabinet

Patent No. 11291/10.

Cabinet Open, and showing Detachable Tray.

BEST QUALITY WORK
NO DANGER TO OPERATOR
NO WASTE OF BRONZE
INCREASED OUTPUT

THIS Bronzing Apparatus has been introduced to enable Bronze Powders, etc., to be applied by hand without any particles of powder floating about the room, or being inhaled by the operator.

It consists, as shown in the illustration, of a box fitted with hinged transparent top and transparent ends. The side nearest the operator has apertures fitted with flexible sleeves with springs to close round the wrists of the operator, so that, although his hands and arms are free to move inside the box, no powder can escape.

The bottom of box is perforated and allows the surplus powder to fall into a detachable tray underneath. The sheets or cards to be bronzed are fed direct from the platen into a narrow horizontal slit fitted with sloping feed board.

This apparatus is made throughout in our own Works, and the edges of the lid and detachable parts are made dustproof. There is no waste of bronze and no injury to the health of the operator, and nothing to wear out. The bronzing is executed immediately under the eyes of the operator, ensuring finest quality work.

JOHN HADDON & CO.
SALISBURY SQ.
FLEET STREET.
LONDON, E.C.

Cabinet in use.

This Cabinet is designed to cope with work up to and including Foolscap Folio in size **Price £3-3-0**

Other sizes to order at proportionate prices.

ACCEPTED BY H.M. FACTORY INSPECTORS. **FACTORY AND WORKSHOP ACT, 1901. This appliance complies with the instructions contained in this Act and which reads as follows: "Regulations 2.B. Appliances so constructed as to prevent as far as practicable the escape of dust into the air of any occupied room."**

THE OLDEST TRADE PROTECTION OFFICE IN THE UNITED KINGDOM.

ESTABLISHED 1776.

PERRY'S . Trade Protection Offices.
(W. R. PERRY, LTD.).
26 & 27, BUSH LANE, CANNON ST., LONDON.

Status Inquiries made as to the position and standing of Traders and others.

PERRY'S GAZETTE & LIST OF CREDITORS are published weekly, and are invaluable to every one in business.

DEBTS RECOVERED & PAID OVER PROMPTLY

Particular attention is called to the fact that this is the only TRADE PROTECTION SOCIETY that possesses at its Offices in London Registers containing full Bankruptcy and other Registered Information, together with Status Information FOR THE WHOLE OF THE THREE KINGDOMS.

TERMS from £1 1s. upwards, according to requirements, PROSPECTUS and further particulars on application to the above offices.

THE FINEST PRINTING INKS
AND VARNISHES,
WINSTONE'S
BLACKS,
DRY COLOURS,
BRONZES, SUNDRIES, AND
The Best of Everything for the Printer.
SHOE LANE E.C.

Spontaneous Ignition of Paper.

The following is an extract (published in the *Papier Fabrikant*) from the communications of the Royal Testing Office, by Professor W. Herzberg, chief of the department for testing paper and textiles :—

When fibrous materials saturated with oil or grease lie in heaps, in consequence of the absorption of oxygen heating occurs which may be so great that the material is set on fire. In themselves, neither fibrous materials nor fatty substances can spontaneously ignite. The fibres, however, offer a large surface to the fats and thereby increase possibility of oxidation. The action of oils varies according to their origin; pure mineral oils are without danger when no heat is supplied from without (sun, hot piping, etc.); vegetable fats are the most dangerous, particularly in an oxidised (rancid, boiled) state, and above all, boiled linseed oil. Animal fats are less dangerous, fish oil being, however, the most dangerous.

That greasy or oily waste paper may be dangerous in the same manner as textile materials has not been heretofore observed. Some time ago a cardboard manufacturer sent a waggon of waste paper of good quality (100 kg. of the material cost 15, — M.) to a paper mill. The paper, packed in sacks, was sent in a waggon from the works of the supplier to the railway and here loaded into the railway waggon. The waggon was then closed and sealed. When loading the goods nothing striking was noticed by any of those concerned. After a journey of only a few hours smoke issued from the waggon, and when the door was opened bright flames shot out of it. The fire was extinguished and a few kilogrammes were taken from the part of the consignment which had not suffered by fire and water and sent to a chemist for his opinion.

The opinion contained, amongst other matters, the following:—The sample consists of very soiled, greasy waste paper. The percentage of fat or grease was found to be 0·88 per cent. When finely distributed, fats are readily oxidised by atmospheric oxygen, and in this manner considerable heat is generated. In the case of bad conductors of heat, and when large masses are heaped up, the heat generated cannot be led away, but it accelerates the oxidisation of other parts so that the generated heat soon increases like an avalanche and, as a rule, the mass becomes red-hot in the middle. Precisely in the case of greasy white paper, cases of spontaneous ignition have frequently been observed, and it is very probable that spontaneous ignition took place in the present case.

Owing to the closed loading-door of the waggon flying sparks cannot come into question.

On the basis of this opinion the railway management sued the cardboard manufacturer for damages. In the course of the process it was established by an opinion of the Testing Office that there was no fat in the paper. What the expert had considered to be fat (0·88 per cent.) were resins and resin-like bodies due to the sizing of the paper. That fat was in the paper is also improbable because not one greasy piece was found in the existing samples, also, the paper mill had never found greasy or oily pieces in the waste paper in former consignments, and, lastly, the price paid for the waste paper led one to expect oily or greasy pieces to have been carefully sorted out. Further, every internal spontaneous ignition generally produces vapours, odours or smoke one or two days before the outbreak of fire. Lastly, an enquiry at twelve large paper sorting plants showed that spontaneous ignition of greasy paper had never been observed heretofore by those asked and that nothing about it had been known from other concerns. The answers to an enquiry sent to ten large fire insurance companies were to a similar effect.

After all, it must be considered very improbable that the consignment of waste paper caught fire owing to spontaneous ignition. The supposition that an outer cause brought about the ignition of the paper has much more probability.

It would be well if these communications led to further discussion, in order that the question of the spontaneous combustion of paper may be cleared up as far as possible.

The Training of Apprentices.

An Edinburgh Scheme.

A report on this subject has just been issued which has been prepared by a joint committee appointed by a conference of representatives of educational bodies in Edinburgh held in June, 1911, and is sent out by the Edinburgh Merchant Company. In the directions given to the joint committee by the conference it was recognised that the system of training apprentices was in many respects defective, and that in view of modern conditions it was desirable that apprentices should as far as possible take advantage of the course of instruction provided in continuation classes and technical and art colleges, and the joint committee were requested to confer with the leading employers in the various trades, and also the respective trade unions, with a view to getting their opinions as to how the system could be improved both as regards practical and theoretical training. The joint committee were also instructed to inquire whether the system of indentures should be revived where it had been given up, whether rules should be framed for both masters and apprentices, and whether certificates should be granted by an authoritative board representative of employers and workmen to apprentices who had completed a proper course of training. The joint committee were also directed to consider whether it would be possible, having regard to existing legislation as to continuation classes, that any proposed reforms should be embodied in a legislative measure.

Among the trades selected for inquiry was that of printing, and in connection with their report the committee, which was representative of several educational bodies, has formulated the following preliminary proposals:—

(1) That each trade should appoint an Apprentice Training Committee for the Edinburgh district to supervise the proper training of apprentices; that this committee should contain representatives of the employers, representatives of the workmen, and representatives of the educational authorities at present engaged in technical instruction; that there should be prepared a list of firms who were willing to work in conjunction with this Apprentice Training Committee; and that the committee should draw up a list of all the apprentices employed by these firms, with full information as to the number of years of apprenticeship, the classes, if any, being attended and the certificates gained.

(2) That this Apprentice Training Committee should consider as to framing a systematic scheme of education for the apprentices, and what course should be followed to induce them to pass through such a course of training.

(3) That this Apprentice Training Committee should also consider what steps, if any, should be taken with a view to further developing the methods of education at present in vogue.

The advisory committees of the Heriot-Watt College, the Edinburgh School Board, and the Edinburgh College of Art connected with the selected trades generally approve of these proposals.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read, because:

It is the only strictly Business Paper.
The only Newspaper.
The only Paper which holds the attention of the man who owns the Plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe **$5.00** per year; Canada **$3.00**. 64 Pages weekly.

The Making of a Half-Tone.

It takes twelve or more people (working at nine distinct trades in as many departments) to complete the smallest engraving—from the time the careful customer places his order until he gets his engraving and pays his bill. Whether the plate is large or small, it goes through just as many hands, and each one puts a certain amount of time on each piece of work. There is no such thing as an "all around man" in the modern engraving business. The work passes from the hands of one man to another until finished, each doing the particular skilful thing that he has been trained to do. For instance: A photograph for a half-tone passes from the office to the superintendent, who sends it to the artist who can best retouch it; from him it goes back to the superintendent, who passes upon the quality of the retouching. From him the copy goes to the operator who makes the negative. This passes to the man who strips the film and prints it by electric light on a sensitised copper plate. After printing, the plate is "burned in." This forms a hard enamel on the surface of the copper which resists the action of chemicals used in etching. Thence the plate goes to the etcher. After the plate has had the first bite in the etching machine, which insures printing depth, it is then staged, to give colour to the dark shadows, placed in the machine for the second bite, and is now staged a second time and re-etched. By this staging and re-etching is attained a degree of quality not found in cheap half-tone engravings. The plate then goes in turn to the first proofer, then to the machine-room for sawing and bevelling; from there to the finisher, and from him to the final proofer, thence to the blockers. Incompetency in any one of these branches must necessarily reflect upon the ultimate result, the engraving. The expense of a half-tone of the highest grade is but a trifle more than that of a cheap one, but its value to the customer is inestimable. This specialism feature is also true of the art department. Each artist has his particular field in which he excels. One artist may be a good letterer or designer, and not be able to draw anything else; another may be good at drawing machinery, but not decorative subjects; others may be good on figures and illustrations, but poor on other things. Therefore, there are many artists of different kinds, all together competent to make lettering, wash drawings, figure work, cover designs, mechanical drawings, to retouch photographs of mechanical subjects, design letter heads, make pictorial illustrations, etc.—*Journal of Engraving.*

Producing Printing Surfaces.

An interesting invention, patented by Mr. E. G. H. Lucas, relates to the production of a printing surface adapted for machine printing from an ordinary gelatino-bromide print, and to the manner of mounting it for use. The print may also be prepared for use as an electrotype or a transfer. The paper print is first prepared as described in Specification 27,957, 1908. The back of the print is then (*a*) saturated with copal varnish or other water-repellant material, (*b*) coated with zinc white in oil colours, (*c*) dried, (*d*) immersed in a water bath for 10 minutes, then for 10 minutes in a saturated salt bath, and finally in a glycerine and ammonia etching bath such as is employed in ordinary collotype; these operations are carried out at 78 degs. F. by using an oven such as is described in the before-mentioned Specification. The print is next placed, back down, on glass, any dust and air bubbles are removed by a soft brush, and the surface is further dried by tissue paper. The print is then restored to the oven at 78 degs. F. for 15 minutes to put it into condition for use as a printing plate. For rotary printing, the print is firmly attached to the india-rubber or other suitable cover of a cylinder, by coating the cover with a hot strong solution of gelatine and squeegeeing the print, back down, on to the cover, using a waxed tissue paper on the face of the print. The print can then be inked up and damped by resilient or pneumatic rollers. Alternatively the print may be mounted upon a resilient india-rubber pad with a bevelled edge to prevent the pad from cutting through the paper during inking, or upon other more rigid supports. For certain purposes, such as for making litho transfers, the print is only temporarily attached to a support for inking-up, by using a weaker solution of hot gelatine. After inking-up with litho transfer ink, the latter is partly removed from the light and half-tones by a composition roller, and the print is grained by a pneumatic india-rubber roller in conjunction with a fabric or grained surface. After peeling off the print from its support, it is treated before use with a strong solution of ammonia to remove any trace of grease from the lights of the image. Other transfers can be made by using various substances with the medium described in Specification 27,957, 1908, such as plumbago. A transfer with plumbago upon gutta-percha is used to obtain an electrotype. Or the electrotype may be made direct from the print when inked up with plumbago. Fluxes may also be used with the medium for inking-up and producing transfers upon glass, metal, and similar surfaces. The process is also applicable for colour printing, the registration for each colour print being obtained by means of a registration frame. In the Provisional Specification the process described for preparing the print includes an exposure through the back of the print prior to the preliminary formalin bath, which treatment assists the hardening of the film.

The Profit on Printing.

In our American contemporary, the *Progressive Printer*, a writer, dealing with this subject, says:—"How much do you, reader, add to the cost of the paper you sell? Actual records kept for a series of years in a large number of shops prove that the net cost of handling stock is not less than an average of ten per cent. of its cost. Many investigators claim it to be higher, and it is not at all improbable that twelve per cent. is nearer correct.

"It is certain, at any rate, that an order of paper for which the printer pays the dealer a hundred dollars will cost him at least a hundred and ten dollars. It is no exception—indeed, we believe we are safe in saying it is the rule—to find printers who get the selling price of stock by adding ten per cent. to the wholesale price. Such printers are selling the only tangible commodity in which they deal at cost or less.

"One reason for the low prices at which stock is sold is the fact that many paper dealers sell to printers' customers as cheaply as they will sell to printers. That is, some dealers retail at wholesale prices. Excepting only the interest on the money represented by the value of the stock the customer furnishes, the expense of handling it is as great as when the printer buys it. Large users of printing furnish much of the stock for it, and printers as a rule make no charge for its handling. Few of them realise that the cost of handling stock is a big item, and many of those who do, know that any attempt to make a charge for the service means the loss of a customer, so they try to 'make it up on other work.'

"There is perhaps no mercantile pursuit in which the margin of profit does not exceed twenty per cent. For instance, the writer recently compiled a catalogue which included office furniture. The discounts to dealers from the list were 50 and 10 per cent. Thus a desk listed at $100 would cost the dealer $45. The 50 per cent. brought the price down to $50; the 10 per cent. additional ($5.00) was used to pay freight and cartage (which it more than paid), and $50 was figured as cost. The selling price was arrived at by adding forty per cent. to the cost, so that a desk listed at $100 by the builder sold at $70. There is no depreciation on desks. There is no power, no cutting, no spoilage. There are expenses of handling, to be sure, but they are a smaller percentage of the cost than the printer must pay for handling paper. Even if the expense were as high, however, the dealer would still have 30 per cent. left for profit. Are there many printers making 30 per cent. net on the paper they sell? How many make 20 per cent.? Ten per cent.?

"It may be said that the desk dealer must carry his stock for a longer time, and so has more in interest charges and rent to figure in. This *may* be true; if so it is to but a very small extent. Every printer has certain space reserved for the storage of stock and for piling it in press-room and bindery while the work on which it is used is going through the house. This space is reserved for the purpose year in and year out, and is a continuing rental charge against the stock used. Much of the storage space is constantly stocked with paper which costs money and on which interest must be charged. Top and bottom sheets in a ream are always spoiled, and at least five per cent. of waste stock must be figured on every job; but there is no waste on desks. On the whole we believe it costs less to handle desks than to handle paper.

"Now what we want to urge is that a charge of at least ten per cent. be made on stock to cover cost of handling, and that at least twenty per cent. on first cost plus handling cost be charged for profit. And be *sure* to make these charges on all stock, including that furnished by the customer."

Exports of Printed Books.

The following were the exports of printed books during 1912, compared with the two previous years:—

1912	468,701 cwts.	£2,786,143
1911	437,690 ,,	2,747,386
1910	378,690 ,,	2,273,195

During December printed books were exported to the extent of £213.614, compared with £231,705 in December, 1911, and £210,604 in December, 1910.

British Exports of Stationery.

During 1912 stationery other than paper was exported to the extent of £1.912,273, compared with £1,718,845 in 1911, and £1,650,242 in 1910. The countries supplied were:—

	1911.	1912.
Germany	£105,356	£121,719
France	55.919	51,343
U.S.A.	78,432	82,435
British India ...	191,131	230,954
Straits Settlements	38,107	46,771
Ceylon	27,289	31,322
Australia	196,669	223,506
New Zealand ...	68,987	73,847
Canada	88,798	108,943
Other Countries ...	868,157	941,433

During Dacember last the exports reached £165,201, an increase of £393 over the corresponding period in 1911, and an increase of £261,118 over December, 1910.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

PRICE TWOPENCE.

Label Stringing Machines.

The operation of putting the strings in luggage labels, tags, etc., is as a rule done by hand, and the want of special machinery for doing the work is often felt by the larger manufacturers. An appliance has now been invented the object of which is to supply this want and the following description of it may be of interest to our readers.

The invention relates to the general construction of machines for stringing tags or labels, and has been patented by Mr. R. Saville and Messrs. Fieldhouse, Crossfield and Co. Tags are piled in a holder 5, and are fed by a plate 7, of usual construction, which is reciprocated by a spring 8, a lever 9, and a cam on a countershaft 2. A needle 12 reciprocated vertically by a lever 18 and a

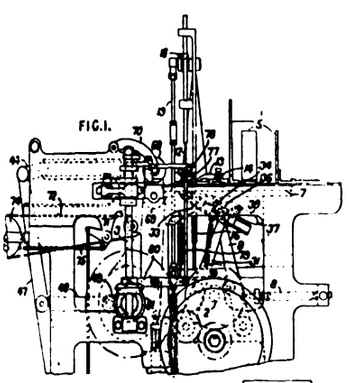

FIG. 1.

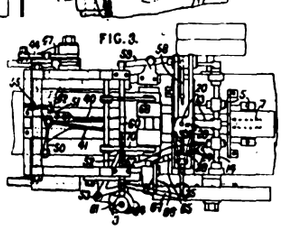

FIG. 3.

rod 19, and works through a hole 20, beneath which the eyelet of each tag is situated after it has been fed from the pile, in which position the tag is clamped by a foot 13 rocked on a shaft 14 by a rod 16. As the needle is rising, nippers 22, Fig. 3, seize the depending string and draw a length from the ball thereof. The jaws are pivoted at 29 to a slide 28, and are connected by links 24 to a bar 25, which is reciprocated by a lever 67 and a cam on a vertical shaft 3. As the bar 25 moves outwards, the jaws are first closed on the string and are then moved bodily with the slide 28, and as the bar returns, the jaws are opened before they return. After the needle has descended, a looper 33, pivoted to a lever 31 rocked by a cam on the shaft 2, is caused to carry the string above the level of the tag by an arm 37, a roller on which runs a cam-plate 39. As the looper rises, its arms are opened out by a pin 34 on one arm riding on a cam 36 on the arm 31 in known manner. A gripper, which comprises a fixed jaw 40 and a jaw 41 pivoted to a slide 42, passes through the loop and seizes the double string, which it then draws through the loop. The slide 42 is reciprocated by a link 44, a lever 47, a rod 48, and a crank 49. Arms 50, 51 on the jaw 41 contact with stops to open the jaws of the gripper against the action of a spring 55. The stop at the forward end comprises an arm 52 pivoted at 53 and rocked by a cam 54 on the shaft 3. When the gripper has drawn the double string through the hole 20, the single string which follows is severed by cutters, one of which is reciprocated by a link 58, a lever 59, a rod 60, and a cam 61. When the double string is being drawn through the loop, it is depressed by a projection on a shaft 77, Fig. 1, which is rocked by an arm 78, a rod 79, a lever 80, and a cam 81, to prevent the loop from catching on the string, and the string which is drawn through the eyelet of the tag is kept vertical by a pin 62, Fig. 3, projected into its path by a lever 65 and a link 66 connected to the lever 67, to prevent it from tearing the eyelet. As the gripper withdraws, the string slips through its jaws until the foot 13 releases the tag, which is then drawn between rollers 68, 69 and dropped down a shoot 71 on to a conveyer band 72. The roller 68 is recessed to allow the gripper to pass it, and is carried by swinging arms 70. The conveyer band is moved intermittently by the rack and pinion mechanism of a drum 74 coupled to the lever 47 by linkage 75. According to the Provisional Specification, the free end of the string may be held by a spring catch which works with the needle.

Offset Printing.

Offset printing might now be called the new art in printing. Through the selling efforts of the makers of offset presses, printers generally have had their attention arrested by this comparatively new art—new, because it is only very recently that the art has been simplified and improved so that the average printer can consider the advisability of utilising it.

What is offset printing? Every printer knows what offset on a job is—an evil that must not be allowed in a print-shop. But it was found that if the principles producing the destructive offset were rightly followed out, the same could be used for creative work.

Like almost everything else that has changed the old way of doing things, the beginning was the result of a blunder or accident, or both.

As I understand it, the combination of circumstances that started the offset development was about as follows:—

An old cylinder press doing cheap work with a rubber tympan;

A careless feeder;

A pressman with an inventive turn of mind.

The pressman observed that the offset (caused by frequently missed sheets) looked better on the back than the job did on the face. Everybody doing offset work now knows it does, if the stock, form and ink are right. These essentials just happened to be right when the inquiring pressman observed it.

Of course, the print read backwards. To utilise the idea practically the form should read the reverse of the ordinary type form. I noticed in the last issue of Barnhardt Brothers and Spindler's catalogue that there are a few founts of type shown called offset type, the face of the letter reading the reverse of ordinary type. I will not say now that the time will come when typefounders will cut all their letters for offset printing as well as for direct type printing. No one can tell what the final outcome of the new art will be. The reading of the form could be reversed by photography and the zinc-etching process to bring the letters in relief.

But lithographic presses did not use type in relief. A "transfer" was made to stone. To-day practically all of offset printing is done by means of methods evolved from the principles of lithography.

For the benefit of the printer-apprentice (and the good trade journal should keep him ever in mind), we will go into the A B C of lithography. Lithography is possible only because of the fact that oil and water will not mix. All lithographing presses have cloth-covered rollers for dampening the stone and skin-covered rollers for inking the transfer. The moisture adheres to the stone wherever there is no ink. The transfer, being covered by an oily ink, does not take the moisture from the dampening rollers. When the form passes under the inking rollers the ink will not adhere to the moist parts of the stone and adheres only to the oily surface of the transfer, thus producing a clean print without the use of type or lines in relief. When a transfer is made for offset purposes, the transfer is reversed so that it will print right. Most offset presses to-day are of the rotary principle. The form, or, more properly speaking, the plate with the properly prepared transfer, is put on a cylinder. I understand that attempts have been made to make a curved stone. It would work, but the expense of the stone and the machine construction needed to carry the stone were much more, and not any more efficient, than the zinc plates now used.

At first, aluminium was used and it worked satisfactorily. It is said that an experimenter who was out of aluminium tried zinc, and now everybody is using it. Zinc, ungrained, will not do so well as stone in the matter of dampening. Graining the zinc gave it the necessary tackiness so that it would hold the moisture. To grain a sheet of zinc it is placed in a "grainer," a machine of very simple construction, consisting of a wooden tray which is given a horizontal "jiggling" motion. On the top of the zinc to be grained in the grainer are placed a lot of marbles. These marbles rattle around on the zinc and produce the graining.

Good lithograph stone is becoming scarcer and scarcer and more expensive, and the discovery that, for offset printing, zinc was better than stone was of great value.

A common method to make transfers of type-forms for offset work is to take a perfectly printed copy made on transfer paper with transfer ink on a modern printers' proof press or job press, then lay the printed transfer face down on the zinc and transfer the heavy pressure to the zinc. The transfer paper is then soaked off the zinc with water, leaving the ink on the zinc. The zinc is then dampened and inked by hand and examined to see that all details are brought out. An offset proof press is now on the market to enable a proof to be taken from the transfer without the expense of putting it on a regular press. This machine will also be useful for print-reversing, and will do away with the use of transfer paper in many cases.

In transferring delicately lined cuts and engravings it has been found that a direct transfer by photography to the zinc gives the best results. The zinc is sensitised and the negative put in close contact with the sensitised surface of the zinc, and exposed to electric light. The zinc is "developed" in a chemical solution. The developed image will take ink, but not moisture, and will work like an ink transfer. These photograph transfers are now being made for the trade by specialists, who call the work photo-lithography. I do not think this is a good name,

Digitized by Google

for "litho" means stone, and the process has nothing whatsoever to do with stone. Here is a chance for word-coiners to make a new word that will be more appropriate, in its derivative meaning, for the new art.

With the development of offset printing the making of photo transfers may become as much of a specialised industry as the making of half-tones is to-day.

The offset printing press is even now a comparatively simple machine. It consists of three cylinders—one for the zinc, one for the rubber blanket, and one for the impression. Most of them have automatic feed, either attached to or a part of the machine.

There are no intricate mechanisms in the functions needed to print by offset. The ink rollers are made the same as rollers for lithography, consisting of a wooden or metal core covered with a skin. It is even now dfficult to get good skins for making the rollers. As near as I can find, there are less than one thousand offset presses in use in this country. If the use of offset presses should increase so as to approximate the number of printing presses, inventive genius will surely find something better for offset rollers, as was found in zinc for use in place of lithographic stone.

One of the best-known makers of rubber blankets told me that the best offset blanket was not made in this country, but was imported. This offers another opportunity for Yankee ingenuity to get busy.

Offset printing was not a commercial success until ink makers gave it their especial attention and produced a good black for offset purposes, and papermakers produced papers that were especially adapted to offset work. Papers called offset papers are now generally sold by dealers. It has only been recently that suitable inks and papers have been generally available for offset printers.

Each new advance in one art brings out advances in all the other allied arts. Photography and printing have been closely allied during the last fifteen years by the art of photo-engraving, and both arts have advanced together.

Lithography and printing from relief (type, etc.) have been competitive to a degree. But the introduction of photo-engraving as an aid to printing lessened the field for the uses of the principles of lithography. Now the principles of lithography have increased usefulness through the requirements of offset printing. The principles of lithography, photography and printing are now more closely bound together in the evolution of the art of offset printing.—*The Inland Printer.*

MESSRS. RAPHAEL TUCK AND SONS, LTD., have issued their latest catalogue of post cards for 1913, which includes the new list of Tuck's Post Card Exchange Register, available for the next twelve months, and containing the names of 2,000 Tuck's Post Card collectors in every part of the world who are open to exchange Tuck's post cards with anyone. With such a comprehensive collection as Tuck's a catalogue of this kind is of great usefulness, and the collection has again been added to with an attractive series of new post cards just issued, and well calculated to uphold the firm's reputation in this line. There are humorous series of cats by Louis Wain, produced, like the bulk of Tuck's new productions, in their famous Oilette process; humorous treatment of elephants; Golf Humour, by Cynicus; Dutch Natives, being an amusing treatment of Dutch children; studies of the sea, of the hunting field, of Chinese life, sketches of dogs by Maud West Watson, and two beautiful photogravure series—"Balkan Folk Types" and "South Sea Islanders," the latter being very interesting and instructive.

THE late Mr. Robert Irvine Brown, printer and publisher, Glasgow, has left estate of the value of £1,256 2s. 3d.

American Machinery for Printers.

Messrs. Parsons and Whittemore (Incorporated), New York, who cover Spanish-America, Australia, New Zealand, South Africa and other countries with their own representatives, have recently entered into contracts with some of the most important American manufacturers of printing machinery to represent them as exclusive agents for the sale of their specialties.

Among the more important manufacturers who have availed themselves of this opportunity to be represented in the export field is the C. B. Cottrell and Sons Co., the well-known manufacturers of high-grade printing machines. They have never attempted to design machinery for handling the cheaper grades of work, and in their line their output represents the best that it is possible to procure. They are manufacturing a new series—Four Roller Convertible Delivery Two-Revolution Press—which represents the latest engineering ideas in the two-revolution field. The machine is designed to provide better distribution, more accurate register, and greater flexibility, is made in all sizes and is being used by many of the best printers and publishers in the United States. They are also making the well-known and satisfactory "Triumph," "Monarch" and "Paragon" Single Revolution Presses. The Cottrell line includes all styles of flat-bed and rotary machinery for use on the better grades of work, and Messrs. Parsons and Whittemore (Incorporated) are to be congratulated on having secured this Cottrell line to offer to the trade.

Another important contract covers the Goss line of Flat-bed Newspaper Web Perfecting Presses known as the "Comet" and the Semi-rotary Presses. These machines were designed by Paul E. Cox, the original inventor of this style of press. The "Comet" press is of the well-known travelling cylinder intermittent web type of machine, and contains a number of important improvements not found on other makes. The Semi-Rotary Web Perfecting Press is a new type of machine that has a number of important features to recommend it to the publisher. The movement is what is called the hit-and-miss action—the cylinders being stationary and the beds travelling a very short distance, in this manner allowing the use of a continuously moving web of paper at a very high rate of speed. The press, being supplied with a supplement attachment, makes it possible to print 14 pages, the product being delivered, gathered and folded ready for mailing. It is claimed to be the only type of flat-bed press on which it is possible to print a 12-page paper from one roll of paper, at the same time employing only 12 composition rollers.

The Springfield Ruling Machine is another important line. The Springfield is equipped with a new style power attachment which ensures a uniform tension on the cloth at the feeding and ruling points all the time. This makes it possible for the manufacturers to build machines with three automatic striking beams and have them all accurately register. The Springfield is made in all commercial sizes and combinations.

The fact that Messrs. Parsons and Whittemore, Inc., are now offering their Spanish-American trade the output of the Western Typefoundry will be good news to many of the printers and publishers of that section. The Western Typefoundry is one of the younger founders now operating in the States on an independent basis, and as they are casting most of the later and popular type faces, the trade will be able to obtain competition on this class of material. This foundry manufactures a full line of brass rule specialties and other printers' requisites.

The firm is also offering a line of jobbing presses, paper cutters, chases, galleys, printers' furnishings and other specialties. This line includes two different styles of jobbing presses, one of which is called the "Latest Style Gordon," and which is one of the best makes of Gordon presses on the market. The other machine is called the "Damon" Improved Jobber, and is simpler in construction, sells for a smaller price, and is made in eight sizes, running from six by ten inches inside the chase up to and including 14½ by 22 inches inside the chase. The smaller sizes are equipped with two form rollers, the medium sizes with three rollers, and the sizes 11 by 17 and larger have four form rollers. It will be seen from this that this press has a very wide range of work and ought to have a large sale.

All these new lines are in addition to those which Messrs. Parsons and Whittemore, Inc., have been offering in the past, which include the well-known lines manufactured by F. P. Rosback Co., the Eclipse Folding Machine Co., the Leader Envelope Machine, etc.

Colour Photography.

In a process of colour photography, patented by Messrs. G. Bauge, A. Dumez, and A. Seauve, colours, dyes and other materials are specified for the three-negative process of colour photography. The materials for the taking filters are, for the red, 615 c.c. of erythrosine or 10 c.c. of Bengal pink per square metre of filter surface; for the yellow, 115 c.c. of tartrazine; for the blue, 5 c.c. of carmine. blue mixed with 1 c.c. of napthhol green per square metre. A 1 per cent. solution of dye is used in each case, and in order to absorb ultra-violet rays 10 grammes of potassium nitrate per square metre are added. In taking the negatives, the filters are used in pairs to produce violet, green, and orange filters, the red and blue screens are used together for the violet, the blue and yellow for the green, and the red and yellow for the orange. The negative plates are prepared by first soaking them in a one-twentieth per cent. solution of ammonia and then dipping them into a solution containing 100 grammes of water, 50 grammes of 95 per cent. alcohol, 2 grammes of one-tenth per cent. solution of pinachrome and 1 gramme of one-tenth per cent. solution of homocol. This mixture will serve for six plates of 9 by 12 cm. The exposure of the negative is checked by simultaneously photographing a scale of colours and shades in grey. For the positive films, gelatine sensitised with a mixture of potassium and ammonium bichromate is used, the red film being impregnated with madder lake to the extent of 8·5 grammes per square metre, the yellow film with cadmium sulphide to the extent of 12·8 grammes per square metre, and the blue film with the precipitate obtained from a solution of sesqui-bromide of iron of 11·85 per cent. strength with ferrocyanide of potassium of 21 per cent. strength, and spread to a density of 6 grammes per square metre. Vegetable parchment supports are used which have been sulphurised by dipping them into a mixture of sulphuric and nitric acid and then into a saturated solution of gumlac in ethanol. Celluloid supports covered with gumlac can alternatively be used. In printing the positives, the exposure is stopped when the yellow print is visible. Either the double or single transfer method of printing may be used, the order of superposition of the positives being dependent upon the process used.

MESSRS. S. A. CATTELL AND SON, 1, Dorset-buildings, Salisbury-square, Fleet-street, E.C., have issued a neat little calendar for 1913, which is a good example of combined half-tone and line designing, engraving and printing in colours. The illustration is that of an old-time hand press, and a pressman showing proofs to a picturesquely attired gentleman of a bye-gone age.

The Leipzig Exhibition, 1914.

The following is the classification scheme of the proposed International Exhibition for the Printing, Binding and Allied Trades and the Graphic Arts, to be held at Leipzig in 1914:—

Group I.—Graphic Art.

Class 1. Historical exhibit: Origin and development of written characters and the graphic arts.

Class 2. Freehand drawings.

Class 3. Pure graphic art (original etchings, original lithographs, and other original graphic productions in one or more colours), the art of writing, original wood-cuts, engraving.

Class 4. Graphic art of reproduction.

Group II.—Applied Graphics and the Art of Bookmaking.

Class 5. Hand-drawings for applied graphic art.

Class 6. Photographic art (originals for the technique of photo-mechanical reproduction).

Class 7. Applied graphic art (illustrations of books or journals), printed letters, book-ornamentation, coloured or marble papers, posters, packings and wrappers, etc.).

Class 8. Artistic bookbinding, end papers, gilt tooling and embossed binding.

Group III.—Instruction.

(Establishment of Educational Institutes and Schools for the Book Industry. Photography and the Graphic Arts).

Class 9. High Schools: School curricula and syllabus of lessons. Drawings, models and similar teaching material. Pupils' work.

Class 10. Art Industrial Schools. School curricula and syllabus of lessons. Drawings, models and similar teaching material. Pupils' work.

Class 11. Industrial and Technical Schools. Continuation schools for apprentices or assistants.

Class 12. Private schools for photography (reproductive photography), printing and allied trades and the graphic arts. School curricula, prospectuses and pupils' work.

Group IV.—Paper Manufacture

Class 13. Historical Exhibit: Writing materials used prior to the invention of paper. Development of paper and its manufacture.

Class 14. Raw materials for rag and wood paper; chemicals, size and filling materials for the preparation of paper.

Class 15. Paper in sheets and rolls; pasteboards. Drawing and painting papers. Paper specially prepared for various purposes. Coloured paper.

Group V.—Stationery and Writing Materials.

Class 16. Paper articles: Bags, folding-boxes and similar articles for packing envelopes, account books, note books, almanacs, copy-books, sketch-books, etc. Playing-cards, photographic cards, crêpe-paper, crêpe-paper articles, embossed stationery, paste-board plates and tie-labels, cardboard boxes and paper pulp products.

Class 17. Stationery, writing, drawing and painting requisites, steel pens, lead pencils, coloured pencils, inks, Indian inks, letter files and the like.

Class 18. Caligraphy and shorthand writing, graphology, comparison of handwritings.

Class 19. Typewriters and manifolding apparatuses, office furniture, etc.

Group VI.—Manufacture of Colours.

Class 20. Historical Exhibit: Development of colour manufacture.

Class 21. Obtaining and preparing of colours for book and lithographic printing, phototyping and copper-plate printing, as also for other printing processes.

Class 22. Colours for oil, distemper and water-colour painting, dyes, colours for chalks, etc.

Group VII.—Photography.

Class 23. Historical Exhibit: The development of photography.

Class 24. Theory and technique of photography. Demonstration of photographic processes. Scientific and technical employment of photography (natural sciences, medicine, law, geography, military affairs, etc.). Special photographic methods (colour photography, cinematography, etc.).

Class 25. Professional Photography: Portraits, groups and genre pictures, landscapes, technical and industrial photographs.

Class 26. Amateur Photography: Portraits, groups and genre pictures, landscapes.

Class 27. Products of the Photographic Industry: Raw materials, chemicals, sensitised materials, optical outfits, cameras, utensils, photographic aids and appliances, technique of reproduction and projection.

Group VIII.—Technique of Reproduction.

Class 28. Historical Exhibit: Development of photo-mechanical reproduction processes.

Class 29. Modern reproduction processes such as line and half-tone etching, etc., in one or more colours. Phototypy in one or several colours. Photographic transfers to wood, stone and metal, facsimile and toned wood-cuts, heliography and heliogravure in one or more colours. Combination of several processes, such as phototypy and chromo-lithography, photogravure and phototypy, lithography, with photogravure, etc., mechanical engraving.

Group IX.—Letter-Cutting and Letter-Founding, and Allied Trades, Stereotypy, Electrotypy.

Class 30. Historical representation of the development of letter-cutting and founding, and of other processes for producing letter-press forms in stereotypy and electrotypy.

Class 31. Products of the art of letter-cutting and letter-founding. Raw materials. Letters and printing materials in wood, celluloid, brass, aluminium, iron, etc. Punched and engraved plates and stamps for embossing and printing. Stamping contrivances and materials. Samples and specimen prints of these products.

Class 32. Curved and flat stereotypy, electrotypy electroplates in copper, nickel and steel, with their methods of production.

You have an unusual opportunity to reach the Office Equipment Dealer, Retail Stationer, and Purchasing Agent—through ONE medium—the

Inland Stationer

The BUSINESS EQUIPMENT JOURNAL.

An examination of the magazine itself shows you why.

The Office Equipment Dealer and the Retail Stationer subscribe to it because it handles the selling end of their lines in a business-like manner. Every issue contains articles of sales plans of real practical value.

The Purchasing Agent subscribes to it because it keeps him in close touch at all times with the latest and best developments in business equipment.

You can reach all three with ONE advertisement and at ONE price by using ONLY *INLAND STATIONER* — BUSINESS EQUIPMENT. Let us send you some important facts.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read, because:

It is the only strictly Business Paper.
The only Newspaper.
The only Paper which holds the attention of the man who owns the Plant.

The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year; Canada $3.00. 64 Pages weekly.

Group X.—Printing Processes.

Class 33. Historical Exhibit: Development of raised, flat and intaglio printing.

Class 34. Raised or relief printing: Printing, in one or more colours, of newspapers, books, jobbing work, music, maps, posters, calendars. Printing on wood, celluloid, textile fabrics, leather and other materials. Wallpaper printing. Embossed printing for the blind. Embossed work, stamping contrivances and materials.

Class 35. Flat Printing: Lithographic and chromo-lithographic printing on paper, textile fabrics, leather, linoleum, metal, glass, porcelain and other materials. Work for business or mercantile purposes. Printing from zinc, aluminium, rubber, etc. Engraving and printing of music. Phototypy in one or more colours. Combination of various printing processes. Post cards, posters. Printing of drawings, plans, etc., by special processes. Raw materials, lithographic stones, tools.

Class 36. Engraved plate printing: Steel and copperplate printing, hand and power-press photogravure, rotary copperplate printing, monogram printing, etc.

Group XI.—Bookbinding.

Class 37. Historical exhibition of the development of bookbinding.

Class 38. Raw materials and tools for bookbinding. Bookbinding materials, leather, cloth, covering and end-papers, clasps, etc.

Class 39. Bookbinding: Handwork, cloth bindings, leather work, account books, stationery and letterpress binding.

Group XII.—Publishing. Sale of Books Retail and on Commission.

Class 40. Historical Exhibit: Development of publishing and trading methods. Special rights, protection of copyright, press censorship, etc.

Class 41. Publishing: New books and new issues, magazines, compilations, etc.

Class 42. Map Publications: Geographical maps, marine charts, atlases, geological, astronomical and physical charts, globes, hemispheres and astronomical globes.

Class 43. Retail and commission book trade, cash sales, school books, etc.

Class 44. Art Publications: Art journals of all kinds, portfolios and compilations.

Class 45. Musical works: Development of the system of writing music. Pieces of music. Literature of music. Discs and cylinders for mechanical musical instruments.

Group XIII.—Newspapers, News Department, Methods of Advertising and Canvassing.

Class 46. Historical exhibit of the development of newspapers, news supply and advertising methods.

Class 47. Daily papers and periodicals of all kinds. News service, telegraphy, telephony.

Class 48. Illustrated periodicals.

Class 49. Trade papers.

Class 50. Press puffing advertising, canvassing.

Group XIV.—Library, Bibliography, Bibliophilism and Collections.

Class 51. Fitting-up of libraries, library plans, views, furniture, catalogues of libraries, etc.

Class 52. Public libraries and reading rooms.

Class 53. Bibliography organisation of intellectual work.

Class 54. Amateur printing.

Class 55. Collection of posters, ex libris, stamps (philately).

Group XV.—Machinery, Apparatus, Materials and Implements for the Printing Industry.

Class 56. Power machines driven by steam, illuminating and other gas, benzine, petroleum or methylated spirits. Electrical and compressed air plant. Motors.

Class 57. Machines, apparatus and utensils for the manufacture of paper.

Class 58. Machines and apparatus for letter-founding, stereotypy and electrotypy. Typesetting and typecasting machines, etc.

Class 59. Machines, apparatus and utensils for letterpress printing, lithography, copperplate and other printing processes. Machines for reproduction purposes and colour printing.

Class 60. Machines, apparatus and utensils for bookbinding, preparation of paper and the manufacture of cardboard boxes, ruling machines, etc., etc.

Group XVI.—Measures for the Protection and Welfare of Workers.

Class 61. Ventilating, dust-removing, and dust-sterilising contrivances.

Class 62. Working clothes, safety and protective appliances, stretchers, first aid appliances, cupboards for clothes, baths, etc.

Class 63. Trade Unions, profit sharing, sick funds, clubs, etc., workers' dwelling-houses, social arrangements.

W. F. Sedgwick, Ltd.

The Firm's Annual Dinner.

The annual winter dinner of the above firm took place at the Angel Hotel, City-road, the other evening. A capital menu provided by the host, Mr. S. M. Kent, was paid ample tribute to. The National Anthem sung and the loyal toast duly honoured, the company prepared themselves for the admirable concert that followed, which proved a great aid to digestion. Most of the items on the musical programme were contributed by members of the company present, and as time progressed the fun increased, each artiste being a specialist in his particular line and an attempt to select one in priority to another would prove an invidious task.

Mr. W. F. Sedgwick, breezy and debonair, with a happy blend of dash and dignity, made an excellent chairman, and was supported in his duties by the popular manager, Mr. J. M. Gabler, both gentlemen setting a good example by appearing on the platform in baritone rôle and adding greatly to the evening's harmony.

The oratory, which was brief and to the purpose, interspersed with the music. The chief toast, that of the firm, was ably delivered by Mr. P. L. Deighton, the oldest employee and representative, a gentleman well known and respected in the world of journalism for nearly 60 years. In a humorous speech he gave much advice, and a retrospect of the firm's career during its 21 years' existence, and supplemented his eloquence with two songs rendered in rollicking style, which excited a mild surprise among the guests when his age was divulged, as he confesses to nearly eighty years. Messrs. Sedgwick and Gabler, in response, both expressed the pleasure it gave them to meet again their workmen at such a pleasant gathering, hoped that for many years to come they would unite at the festive board, and remarked on the past successful year and optimistically predicted many more, exhorting the men to pull together with the unanimity that has always existed between them.

Mr. H. Turner, a former employee of nineteen years' service, who has now left to take up a position in the L.C.C. School of Photo-Engraving, voiced the sentiments of the visitors.

"Auld Lang Syne" brought the pleasant evening to a close.

THE LIGHTING OF FACTORIES.—The Home Secretary has appointed a committee to enquire and report as to the conditions necessary for the adequate and suitable lighting (natural and artificial) of factories and workshops having regard to the nature of the work carried on, the protection of the eyesight of persons employed, and various forms of illumination. The members of the committee are:—Dr. R. T. Glazebrook, C.B., director of National Physical Laboratory (chairman); Mr. Leon Gaster; Professor Francis Gotch, D.Sc., F.R.S.; Mr. I. Herbert Parsons, M.B., D.Sc.; Mr. W. C. D. Whetham, F.R.S.; Sir Arthur Whitelegge, K.C.B., Chief Inspector of Factories. The secretaries of the committee are Mr. D. R. Wilson, one of H.M. Inspectors of Factories, and Mr. C. C. Paterson, of the National Physical Laboratory.

Let us introduce Premier Black

A NEW QUICK-DRYING INK OF QUALITY.

That is what we say to you, and what we want you to say to your machine men. We know it will be to your advantage, because Premier Black is so quick in drying that you will save the cost of slip-sheeting, however highly finished the paper—because Premier Black will print equally well the finest half-tone blocks and heavy type—and because Premier Black is an intensely black and lustrous ink. Premier Black was used for printing this issue of the "British and Colonial Printer and Stationer," and Premier Black costs only **2/-** per lb.

Trade Notes.

THE Bermondsey Borough Council require tenders for printing for one or three years from March 31st next. Particulars may be had and samples seen at the Town Hall, Spa-road, Bermondsey, S.E.

THE annual general meeting of the Machine Rulers', Bookbinders', Printers' and Kindred Trades' Overseers' Association will be held on Tuesday next, February 4th, at the "Ship," Ivy-lane, Newgate-street, E.C., at 7.30 p.m.

AN International Exhibition of original lithographs is being arranged by the Senefelder Club, and will be held at the Brighton Art Galleries next month (February) A number of exhibits from Continental countries will be shown, as well as British work.

THE death has taken place at Topcliffe, near Thirsk, of Canon John Julian, D.D., an authority on hymns, and editor of that colossal work, "A Dictionary of Hymnology," which sets forth the origin and history of Christian hymns of all ages and nations. Dr. Julian was also the author of many other well-known works.

THE death is announced of Mr. Reuben Charles Spark at Croydon-road, Newcastle. Mr. Spark had worked on the London *Morning Post*, the *Sunderland Herald*, *Northern Daily* and *Evening Express*, and the *Newcastle Daily Leader*. Since the stoppage of the last named journal he had been a superannuated member of the Typographical Association.

THE STATIONERS' SOCIAL SOCIETY.—The newly-elected president of this flourishing Society is Mr. W. Bornecke, a gentleman whose genial qualities are well known, and for whom we predict a most successful year of office. The annual dinner of the Society has been fixed for Saturday, March 1st, and will be held in the Grand Hall of the Hotel Cecil.

TENDERS are wanted by the Corporation of Devonport for printing, stationery, books, etc., for one or three years. Forms of tender and particulars can be obtained at the Borough Treasurer's Office, 37, St. Aubyn-street, Devonport. Tenders are also wanted by the Corporation of Scarborough, for printing 80,000 illustrated booklets, Form of tender can be obtained from Mr. S. Jones, town clerk, Scarborough.

A MEETING was held in the Manchester School of Technology on Saturday last to celebrate the centenary of the birth of Sir Isaac Pitman, the inventor of the system of shorthand. The Lord Mayor presided, and among those who took part in the proceedings were the Vice-Chancellor of the University (Sir Alfred Hopkinson, K.C.), Mr. J. C. Maxwell Garnett (the Principal of the Manchester School of Technology), and representatives of the teaching profession, the newspaper press, and of commercial interests.

THE secretary of the Association of Chambers of Commerce has addressed a letter to the Secretary of State for Foreign Affairs conveying the terms of a resolution passed at the Newcastle meeting of the Association urging the Government to press upon foreign Governments the necessity of establishing as a universal law that "first public user" shall be the fundamental condition of ownership of a trade mark. The letter pointed out that the position of British manufactures with regard to trade marks is far from satisfactory in some foreign countries. The reply of the Foreign Office was to the effect that the resolution will be borne in mind and the subject brought up for discussion at the next International Conference for the Protection of Industrial Property.

THE annual meeting of the Scottish Paper Box Manufacturers' Association was held at Glasgow, last week. In a statement of the work of the association during 1912, the determinations of the Trade Board with regard to the minimum rates of wages to be paid to female and male workers and to the value of the association as a medium for informing and advising paper box manufacturers in relation to their many obligations under the determinations were referred to. The following gentlemen were elected office-bearers for the ensuing year, viz.:—Chairman, Mr. James M. Ritchie; vice-chairman, Mr. Daniel Browning; executive committee—Messrs. J. J. Thompson, J. F. Macmillan, R. M. Brown, W. E. Newboult, John Cullen, A. Shearer, W. Smith, and D. P. Ritchie.

THE rights of a reporter were involved in a case that came before the Bow County Court, last week, where Mr. W. J. White sued the publishers of the *Barking Chronicle* for a fortnight's wages, contending that he was entitled to a month's notice. He had received a fortnight's notice, which he accepted under protest. Three members of the National Union of Journalists gave evidence as to the custom of reporters receiving a month's notice. Judge Smyly held that the custom had been made out and was a very reasonable one. He gave the plaintiff judgment for £7 15s. 2d., a fortnight's salary and commission.

THE death is announced of Mr. John Angus, stationer and printer, 544, Argyle-street, Anderston, Glasgow, at the age of 64 years.

THE offices of our American contemporary, the *Graphic Arts*, have been removed from 85, Broad-street, Boston, to 530, Atlantic-avenue, Boston, U.S.A.

IT is announced that Colonel à Court Repington has retired from the position of editor of the *Army Review*, and the post has been taken by Major H. A. L. H. Wade, late the Royal Field Artillery.

ACCORDING to *Kemp's Mercantile Gazette* the number of failures in the printing and stationery trades of England and Wales for the week ending Friday, January 24th, was one; the corresponding week in 1912 showing three.

COLONEL SYKES, M.P. for the Knutsford division, and Mr. P. M. Oliver, the prospective Liberal candidate, have decided not to allow any picture posters to be used at the next election. This example, if followed, will be bad for colour printers.

A BIG ADVERTISER.—In some evidence before the Select Committee on Patent Medicines last week, Sir Joseph Beecham, of pill fame, stated that he spent a little over £100,000 a-year in advertising all over the world, his receipts being something like £360,000 a-year.

THE death has occurred, at Rawtenstall, of Mr. Thomas Hogg, at the age of 70 years. He was the oldest Rossendale journalist, and for some years was editor of the *Rossendale Free Press*. Previously Mr. Hogg had held positions on the Press in various Lancashire and northern towns.

THE death has occurred, at Liscard, of Mr. Thomas W. Kellet, head of the firm of Sharpe and Kellet, printers and bookbinders, Exchange-buildings, Liverpool. Mr. Kellet was in his seventieth year, and had been for fifty-six years in business in that city.

THE business calendar of Messrs. Perkins, Bacon and Co., Ltd., Southwark-bridge-buildings, S.E., is of a handsome character, and well-executed. In size 18 by 14 inches, it consists of an elaborately engraved design in bank-note style, at the top of which is the firm's announcement; in a panel is a portrait of the King, and the dates are on tear-off sheets, one to a month, with engraved borders. A blue leatherette frame encloses the calendar which is an excellent example of the firm's work.

COLONEL SEELY, Secretary for War, speaking at the dinner of the London district of the Institute of Journalists, said he had been a journalist himself; not only a journalist, but also a newspaper proprietor, for when he came back from the South African War he was very much flattered by being invited to go on the board of an eminent journal, and he did so. When he went to a meeting of the board he found that the question was how they were going to continue to carry the journal on, and he was asked if he had £2,000. He faced it out as best he could by saying that he had no money at all, was overdrawn at the bank, and had a wife and family.

AFTER a hearing that extended over nine days the special jury engaged upon the libel action in which local gentlemen claimed damages from the *Belfast Evening Telegraph*, on the ground of alleged libel connected with the Belfast riots, failed to agree, and were discharged. Mr. Justice Kenny summed up in rather less than two hours. The jury were rather more than that time in deliberating, and when they returned into Court the foreman said he saw no possibility after all the points had been carefully considered of their arriving at a conclusion. His lordship and counsel for plaintiff agreed there was no use in longer detaining them, and the jury retired.

ON Saturday night, a message from the Queen was received by the Women's Auxiliary Committee of the Institute of Journalists, at a dinner at the Shaftesbury Hotel, given in honour of Mrs. Carruthers as the first lady appointed to the chairmanship of the institute. The following is the text of the message:—"The Queen sincerely thanks the members of the Institute of Journalists assembled at dinner to celebrate the election of first woman chairman of the London district for their kind telegram. Her Majesty much appreciates the assurances of loyalty and good will to which message gives expression, and trusts that the members of the institute are enjoying a pleasant evening."

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

My innocent "Quad" of last week which recorded Mr. Austen-Leigh's observation that American printers were sometimes daily fellow-lunchers nearly got me into dreadful trouble. The word lunchers turned up in proof as "lurchers," yet poaching was the very last thing I had in mind.

o o o

Spelling is a tricky thing. Shakespeare in signing his own will spelt his name in different ways. Caxton, indeed, was not only our first printer, he was a great pioneer spelling reformer. He became this by a sort of necessity. People who wrote might spell how they liked, but some sort of uniformity was necessary in a printed book. So in default of finding a spelling style ready at hand, for reference, old Caxton made his own—more or less.

o o o

But let me see—what was I "on to," when I opened up a spelling dissertation? Ha! I've got it. I meant to ask you if you could spell "Pedagogue."

o o o

Because I fancy some of you can't, but think it should be "Peddie-gogue."

o o o

And because you dislike the supercilious air we associate with pedagogy, and have in some sub-conscious way attached the thought of that to the technical librarian of St. Bride, simply because his name's Peddie, you've been staying away from his Monday evening lectures on the printing of old British books. The attendance on Monday, January 20th, was not quite up to that of Monday, 13th.

o o o

If your reason was only that "sound" reason, it was—well, most unsound. For Mr. Peddie is quite human, with blood and not ink in his veins. And he's a born explainer. He puts himself at once and easily into the position of one who has not had the opportunity of getting acquainted with the typographical data of St. Bride's. He and you seem to be talking familiarly and pleasantly together about the whole subject, with a clear understanding at the beginning and a clear course pursued through the stages, and a clear and happy ending.

o o o

He was talking last week about the books of the sixteenth century. I am hoping to hear him to-night (January 27th) on our printing in the seventeenth century.

o o o

Do for goodness sake make a diary note of these Monday talks, and look at it when you've made it.

o o o

It won't be creditable to London printerdom if the great pains he has taken to equip himself for this task, and the labour he bestows on having specimens ready to show, should not be recompensed in the best of ways by a crowded hall. We were going on swimmingly till the 20th, but that night the muster was a bit disappointing.

o o o

Harking back to the "*Imprint*" which I mentioned last week, I will own up that in the first hasty glancing I had not noticed the interesting fact that its type was cut by the Lanston Monotype Co. at the instance of the *Imprint* editors. It is a 14 point upon a 16 point body. Certainly it is a beautiful letter

o o o

When I had to buy a Bible lately at the Oxford University Press for one of my family, I furtively stole—(After this admission our contributor will in future be excluded from our columns.—Ed.). Gently, gently, if you please. It was only a glance. I furtively stole a glance round the show-room, to see that no one was present to rebuke me if I chose almost a modern face type after all, instead of the old face which I knew very well I ought to be preferring.

o o o

The fact is the thick and thin of the modern were not too violently contrasted;

Digitized by Google

whereas the old face or old style did overdo the thing a bit. Broad, evenly broad, and black, evenly and terribly black, it stook out in startling violence against the white paper. It wasn't reposeful enough for me. It was a right thing done wrongly; and as I didn't really quite like it, I wasn't going to pretend that I did. "No man," said old Dr. Johnson, "is a hypocrite in his pleasures."

o o o

Now this *Imprint* type is a happy mean. William Morris would quite likely have toned it down a bit typographically. This letter is delightful and the judgment exemplified, and the vigorous initiative attested are distinct gains to printerdom.

o o o

I have been reading the first part of Dibdin's Decameron, in *The Imprint*. Dear old London parson, how he did love his old books. How he makes one love them too, and how worthy they were of being loved. It is a great service, which is being rendered to us by these Editors, in enabling us to get this Decameron "month by month," and finally to separate it and keep it bound as a distinct work.

o o o

Messrs. Blades, East and Blades gave a like chance when they issued a *facsimile* reprint of "Moxon's Mechanics" as a portion of their *Caxton Magazine*, and among the few thousands of printing craft journals which I possess these copies with their Moxon *facsimiles* are among the most valued. I have not detached the Moxon portion yet; but I will.

o o o

Our old bibliographer, Dibdin, is interesting enough in himself. He had also a very interesting relative.

o o o

His uncle, Charles Dibdin, was the famous writer of sea songs. He was an unpaid recruiting officer for the navy. In fact the Government gave him a pension at last, in gratitude for his "Poor Jack" and the 900 other songs that streamed from his pen. Nine hundred songs! He truly could say with Burns: "My barmy noddle's workin' prime."

o o o

He oughtn't to have been anything, and oughtn't to have been able to do anything. It was rank disrespect to the eugenic experts. For he was the eighteenth child of his mother.

o o o

However, "he didn't know his place" in the scheme of things; and so he presumed to call his soul his own and "to be somewhat"; and that from his very boyhood; for he had produced an opera at Drury Lane, written and composed by himself, before he was seventeen.

o o o

He wrote "Tom Bowling" in affectionate honour of his brother, about thirty years older than himself, who had died at sea. The brother was captain of an East Indiaman and was father of our bibliographic Dibdin, of the "Decameron."

o o o

The "Decameron" tells us a vast deal, and tells it all most pleasantly, about the great printers of the past. They are a sort of lay saints receiving gossipy old Dibdin's reverent homage.

o o o

"Decameron" is a fearful enough title. Its derivation exhibits it as a name for anything that requires ten days for its happening. Boccaccio gave the title to a collection of ten tales each supposed to need a day for its narration.

FRANK COLEBROOK.

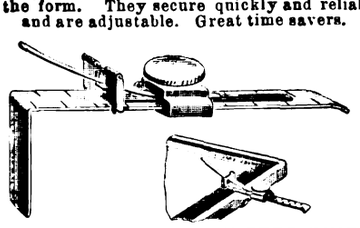
THE late Mr. George Wynne, editor of the *Liverpool Mercury* from 1890 until 1904, has left estate of the value of £3,306.

A HANDSOME catalogue of paper slitting and re-winding machines, tube making and glueing appliances, etc., is issued by Mr. Ferd Emil Jagenberg, of Dusseldorf, Germany. It contains particulars of many excellent labour saving machines of an up-to-date character for the paper and allied trades, and possesses the advantage of being printed in English. The Jagenberg Works were established in 1878 and now employ 750 workmen, and cover an area of 30,000 square metres.

THE selection of matrices that is available for use on the Linotype machine offers a wonderful choice of faces to select from, and week by week sees additions being made to the number. Romans, clarendons, latins, titlings and display letter, such as De Vinne, gothic, doric, antique, and other sorts also figure in the specimen sheets that are issued by the firm. Such a variety in faces as is available to the Linotype user places the machine in the front rank for the general work of the printing office.

KLIMSCHS JAHRBUCH, 1913. Vol. xiii. 310 pages. Imperial 8vo. Price 4 marks. Frankfort-on-Main: Klimsch and Co.

All who are interested in the progress of the art and craft of printing in Germany will be delighted with a perusal of the 1913 issue of this well-known German printers' annual, on which a great amount of time, energy and money must have been spent. Some important alterations and improvements have been made since the last issue. Acceding to numerous requests, Messrs. Klimsch and Co. have this year for the first time dealt with all the new things that have been introduced to the printing and photo-engraving industry during the past year, fully describing them and in most cases illustrating them. This has added considerably to the value of the year book as a work of reference. At the same time the price has been reduced from six marks to four marks, and the edition increased to 2,000 issues. There are numerous signed articles, and the contents relate to the various illustrative and printing processes and the newest machinery and tools used therefor. At the end of the volume is a chronologically arranged summary of the events in the German printing world of the previous twelvemonth, a catalogue of the trade literature that was published, and a list of the German patents issued from July, 1911, to July, 1912. Following this are a number of specimens of fine printing and illustrations in various processes, suited to all manner of purposes. The execution of the work and its contents are on a high level, several of the art insets being of considerable artistic merit, whilst the printing of the text throughout, in a beautiful old-style roman type, is admirable. We understand that the present edition, which is twice as large as the last, has been already nearly sold out.



THE "Handy Newspaper List" for 1913 is the 23rd annual edition of this reliable and useful directory of newspapers which is published by Messrs. C. and E. Layton, 56, Farringdon-road, E.C. The arrangement of the book is such that any newspaper or periodical of which particulars are wanted may be easily turned up; the classification of the provincial press is excellent, and the book is remarkably well worth the sixpence charged for it.

THE PRESS ETCHING CO., LTD., which, by the way, has now completed its fiftieth year as a block-making firm, has issued a neat little booklet, treating of the subject of half-tone illustration in a way that should help users of blocks to select the size of screen mesh that will suit the paper on which the printing has to be done. It shows at a glance the effect of different screens, from 60 up to 200-line by means of a series of illustrations, so that the desired style may be indicated when giving an order.

MEGILL'S GAUGES

For your Platen Machines.

You need them to lay the sheets to easily and quickly, to get them all true and square in relation to the form. They secure quickly and reliably and are adjustable. Great time savers.

This is Megill's EXTENSION FEED GUIDE. For printing large sheets. Secured in the bale at edge of Platen.

From your Furnishers or Headquarters:

EDWARD L. MEGILL, 60, Duane Street, New York, U.S.A.

The Original Inventor and Manufacturers.

Many Styles. His Signature and Trade Mark on packets denote genuineness. ESTABLISHED 1870.

Reference, National Park Bank of New York having Foreign Correspondents.

The following London firms carry stock of Megill's Gauges:—HUNTERS, LTD., 16-18, St. Bride-street, E.C., and H. W. CASLON & CO., LTD., 82 and 83, Chiswell-street, E.C.

SPECIAL PREPAID ADVERTISEMENTS.

IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us by the first post on Wednesday to insure insertion the following day.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS

(3 Insertions: TWO SHILLINGS),

and Fourpence for each additional Eight Words. Minimum Charge, One Shilling.

BUSINESSES FOR SALE or WANTED, MACHINERY WANTED or FOR SALE, SALES BY AUCTION, TENDERS, PUBLIC APPOINTMENTS, MISCELLANEOUS—One Penny per Word.

ADVERTISERS, by paying an extra fee of Sixpence, can have the replies addressed to the "British and Colonial Printer and Stationer" Office under a number, and such replies will then be forwarded post free.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C.

Situations Wanted.

CUTTER-WAREHOUSEMAN seeks situation (28); all-round practical experience, London, Provinces; thorough knowledge Papers, giving-out, ordering, advising; knowledge departments; photographer.—Ashley, 53, Warbeck-road, Shepherd's-bush. 13150

Business for Sale.

FOR SALE as a going concern the old-established Printing and Stationery Business carried on by The Keighley Borough Printing Works Co., Ltd., at Cavendish-street, Keighley; central position; well equipped with modern plant turning out high-class work.—For full particulars and appointment to view, apply F. S. Pearson and Cryer, Incorporated Accountants, Keighley. 13151

Machinery and Plant for Sale.

ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos. —Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

Property To Let.

CLERKENWELL.—Warehouses and General Business or Manufacturing Premises to Let. Modern construction and well lighted. Very moderate Rentals.

13 and 15, Little Sutton Street. Floor space about 28,000 sq. ft., would be divided.

11, Little Sutton Street. Floors to Let in this building.

17, Little Sutton Street. Convenient corner premises. Floor space about 3,800 sq. ft.

State Printing in America.

WITHOUT going into the pros and cons of the advisability of a nation installing a State printing office and thus taking work away from private firms, it may not be amiss to note a few figures from the report of the United States Printer, which is contained in a book of over six hundred pages, and shows in detail the cost of the maintenance, operation and expense of the U.S. Government Printing Office, and the amount of work produced therein. The report shows that "the total appropriations for salaries, maintenance and operation during the fiscal year ended June 30th, 1912, were $5,547,634. The appropriation for the office of the superintendent of documents ($255,884) was deducted from this amount, and there was allotted and made available for the production of public printing and binding $5,291,750. The charges for repay work (which consists of work performed for the departments and chargeable to appropriations other than that for public printing and binding) amounted to $959,043 92 during the fiscal year. The total disbursements and outstanding obligations amounted to $6,388,730.79, leaving an unexpended balance of $117,947.13 to the credit of the several appropriations. The total charge for work performed was $6,776,165.18, which exceeded by $468,402.44 the total charge for work performed during the preceding fiscal year. The total amount of expenditures for maintenance, operation and general expenses of the Government Printing Office, not including the expenditures for the office of the superintendents of documents, was $6,254,907.37. The total charges for completed work performed during the fiscal year ($6,776,165.18) exceeded the total expenditure to the amount of $521,257.81, which is 8·33 per cent. of the total expenditure. The expenditures for operating the printing office during the fiscal year 1911 from all appropriations except those for the salaries and general expense of the office of superintendent of documents amounted to $6,245,080.88, while the corresponding amount for the fiscal year 1912 was $6,254,907.37. The total charges for completed work during these two years were $6,307,762.74 and $6,776,165.18, respectively. Therefore, printing for which $1 was charged during the fiscal year 1911 cost 99 cents to produce as compared to 92 cents during the fiscal year 1912. These figures show the enormous quantity of work that was done by the Office, and although it may have effected a saving to the country as a whole to have it done there, it represents a considerable sum that would otherwise have been done by private firms.

* * *

The Scottish Dispute.

UNFORTUNATELY even thus early in the year, there is every likelihood of a dispute in the printing trades of Glasgow and Edinburgh coming to an open rupture. The Scottish Typographical Association some time ago drew up a service of rules to regulate working conditions in the trade, such as overtime, suspensions, and the regulation of employment during slack seasons, etc., and these rules it desires to enforce throughout the industry in Scotland. The master printers of the two cities named have, however, objected to some of the provisions in the rules, and negotiations have been proceeding for some months between the masters and their employees, culminating on Monday in a conference which came to naught, and the only result of which was to bring a threat from the masters to lock out their men on February 15th next if they did not in the meantime modify their demands. This lock-out will be the first open rupture between the parties concerned for a large number of years, and is the first occasion on which a lock-out has been resorted to. The number of men affected is about 2,000, and practically the whole of the book and jobbing offices of Glasgow and Edinburgh will be concerned. Let us trust that in the fortnight that is yet to elapse before the cessation of work some way out of the difficulty may be found that will be acceptable to both parties.

* * *

Trade Union Law.

SUFFICIENT time having elapsed for the general public to have become better acquainted with the important decision of the House of Lords in what has become familiarly known as the Vacher case, the seriousness of the position is becoming realised. It formed the subject of an interesting debate in the House of Lords last week-end. Trade unions have enjoyed immunity from actions in tort since the Trades Disputes Act of 1906, which was passed to allay the sense of injustice excited by the decision in the Taff Vale case, and now this latest decision of the Courts extends that immunity to the extent that a trade union cannot in any circumstances be sued for any tortious act, such as libel, slander, injury to person or property, etc., whether it has reference to a trade dispute or not. The Lord Chancellor explained that the object of the Act was to protect sick and benefit funds from being diminished as the result of the action of individuals who happened to be leaders of trade unions; that trade unions could not use the machinery of oppression with absolute immunity, and that though Parliament had decided a trade union could not be sued, that was a smaller evil than allowing the funds for the sick and aged to be attacked. Earl Russell, however, pointed out that though it was necessary to protect funds intended for the sick and the aged, yet trade unions had always reserved the right to use those funds for industrial warfare. Also that by the Act Parliament had set up an organisation that was above law, and that was an extremely dangerous thing to do; it would be easy for powerful organisations to do an untold amount of injury to individuals.

Digitized by Google

There is much to be said for this view of the matter, and we favour the suggestion of the *Manchester Guardian* that the danger would be removed by inserting in section 4 of the Act, which gives immunity to trade unions of workmen or employers from actions in respect of tortious acts committed by them or on their behalf, the words "in contemplation or furtherance of a trade dispute," which are to be found in all the other sections of the Act, and the omission of which brought about the judgment in the case of Vacher *v.* the London Society of Compositors.

* * *

Early Stencilling.

THE first discovery of paper in China, according to Dr. M. Aurel Stein, who has published an account of a research campaign just completed, was made about 102 A.D. In all probability it dates back earlier, but Professor J. Von Wiesner has proved by a microscopical analysis that the documents found by Dr. Stein represent the earliest effort at present known in the production of rag paper. Another art of early origin still in use by the printer or bookmaker of to-day is stencilling. In some of the ancient Buddhist temples near Tan-huang Dr. Stein saw walls decorated with long rows of small pictures of Buddha, all alike in outline and pose, stencilled on the plaster surface. Prior to the introduction of paper, the stationery of the earliest Chinese consisted of wood and silk.

Criticism of the Insurance Act.

AT the first annual meeting of the Employers' Parliamentary Association, held at Manchester, recently, it was strongly contended that a material amendment of the Insurance Act, especially in the matter of its incidence, was necessary. It was pointed out that as employers, one thing which concerned them more than any other was the tax imposed upon employers merely because they were employers. The hon. secretary (Mr. J. R. Omerod) said: "The taxation of employers not upon profits, but upon the number of heads employed, in my opinion, cannot stand, because it is founded upon wrong principles, upon bad economy, and upon injustice to both employers and workpeople, and to the general community."

THE death is announced from Melbourne of Mr. Arthur Lloyd Windsor, who was the editor of the *Melbourne Age* from 1875 to 1900. Mr. Windsor was at one time connected with the staff of the *Melbourne Argus*.

Financial.

Offices of the *British and Colonial Printer and Stationer*,

58, SHOE LANE, LONDON, E.C.

WEDNESDAY, Jan. 29th, 1913.

THE demand for credit in the money market has shown no relaxation this week, and rates have ruled high. Supplies in the outside market have been insufficient, and the market has considerably increased its indebtedness to the Bank of England. Discount rates have also been put up. Large gold exports took place last Thursday, but the receipt of bar gold at the Bank since then has reduced the net efflux to date to £114,000. On Monday about £1,050,000 was offered in the open market, of which India and the trade will take about £200,000, the balance probably being secured by the Bank. The optimism which came over the Stock Exchange in the latter half of last week gave place to nervousness at the end of the week, owing to the change in the Balkan position, but a calmer and more hopeful feeling dominates markets now. Consols are steady, but are a trifle lower than a week ago, the quotations being 74⅝ to 74¾ for money, and 74 1/16 to 74 3/16 for the account.

The miscellaneous industrial market has fluctuated from cheerfulness to depression, but at the time of writing it is steady, with business on a very small scale. Our list of printing, newspaper and publishing shares shows few movements, but each of them are upwards. They comprise rises in Amalgamated Press Ord. of 1/16 to 6½—6¾; in Associated Newspapers Ord. of 6d. to 24s.—25s.; in Kelly's Directories Pref. of ⅛ to 9¾—10¼, and in the Deb. of the same of 1 to 92—95. Business has been done during the past seven days in Amalgamated Press Pref. at 21s. 3d.; in Associated Newspapers Pref. at 21s., 20s. 6d. and 21s; in Cassell and Co. at 98s. 9d.; in John Dickinson and Co. Deb. at 100¾; in Ilford Ord. at 13s., and in the Pref. at 19s.; in *Illustrated London News* and *Sketch* Pref. at 13s. 6d., and in the Ord. at 3s. 6d.; in in International Linotype at 81, 78½, 79½, 79 and acc. 78½; in Kelly's Directories Pref. at 10⅛ and 10 1/16; in Linotype and Machinery A Deb. at 60, 61½ and 61, and in the B Deb. at 48 and 46½; in George Newnes Pref. at 15s. 3d., 16s. 3d., 15s. 6d., 15s. and 15s. 9d.; in C. Arthur Pearson Pref. at 67s. 6d.; in Spicer Bros. Pref. at 9 5/16 and 9⅛.; in Standard Newspapers Pref. at 56s. 3d.; in Raphael Tuck and Sons Ord. at 19s. 3d., and in the Pref. at 5; and in Weldons Ord. at 31s. 10½d.

DIVIDENDS AND REPORTS.

WELDONS, LTD.—An interim dividend, payable February 10th, has been declared on the ordinary shares at the rate of 10 per cent. per annum for the half-year ended December 31st.

"SUNDAY TIMES," LTD.—With a capital of £100,000, divided into 30,000 six per cent. cumulative preference shares and 70,000 ordinary shares of £1 each, the *Sunday Times*, Ltd., is about to issue 24,000 £1 preference shares at 22s. a share—2s. on application and 20s. on acceptance. Already 30,000 of these shares are issued, and 67,257 ordinary shares The paper has been established for 90 years, and the net profits of the past three years have averaged £12,000 a year.

GUARD BRIDGE PAPER CO., LTD.—The directors of the Guard Bridge Paper Co., Ltd., announce an interim dividend at the rate of 12 per cent. per annum, free of income-tax, on the ordinary shares for the past half-year.

RAMSBOTTOM PAPER MILL CO., LTD.—The report for 1912 states that the gross trading profits after payment of directors' fees, were £9,519; there were dividends received from Kellner-Partington Paper Pulp Co. of £9,000, and £9,055 brought forward, making £27,574. The directors place £2,000 to the depreciation fund and recommend a final dividend of 25 per cent. per annum on the ordinary shares, making 20 per cent. for the year, leaving to carry forward £12,231. The trading profit in 1911 was £8,454, and the total available £25,398. The figures for 1910 were £6,519 and £20,587. For 1911 20 per cent. was paid, and for 1910 15 per cent. The company holds 45,000 ordinary shares, valued in the balance sheet at cost, in the Kellner-Partington Paper Pulp Co., the present market value of which is considerably higher, while there are further investments to the amount of over £24,000.

COMPANY NOTICES.

POWER DIE PRINTING SYNDICATE, Ltd.

Notice is given that a meeting of the company will be held at 19 and 20, Holborn-viaduct, London, on March 4th, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

NEW CHESHIRE COUNTY NEWS CO., Ltd.

At a meeting of the company, held at Rochdale, on December 18th, the following resolution was passed; and at a subsequent meeting, on January 10th, was duly confirmed:—"That the company be wound up voluntarily under the provisions of the Companies (Consolidation) Act, 1908," and at the last-mentioned meeting Mr. John L. Worthington, of 30, Park-range, Manchester, was appointed liquidator for the purposes of the winding up.

UNIVERSAL TYPECASTER (PARENT) CO., Ltd.

At a meeting of the company, held at London, on January 23rd, the following resolution was passed:—"That it having been proved to the satisfaction of the company that it cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up same, it is hereby resolved that the company be wound up voluntarily, and that Mr. Chas. Harris, of 26, Shaftesbury-avenue, W., be appointed liquidator to conduct such winding-up." Notice is given that a meeting of the creditors of the company will be held at 26, Shaftesbury-avenue, W., on February 12th,

COMMERCIAL INTELLIGENCE.

Re GORDON RAINS KELSEY.
A Printing Partnership.

This debtor attended before Mr. Registrar Brougham on January 24th, at the London Bankruptcy Court, for public examination upon accounts showing total liabilities £1,752 17s. 8d. (unsecured £1,293 3s. 11d.), and assets "nil." Replying to Mr. W. G. Williams, official receiver, the debtor stated that in December, 1904, he entered into an arrangement to join Mr. W. H. Woodall at 4, Bond-court, E.C., as a partner in his business as a printer. No deed of partnership was executed, but he gave a letter to Mr. Woodall agreeing to the partnership, and to find £500 capital. Witness worked in the business at a weekly salary of £3, pending his raising the £500 from his interest under his father's will. The Court refused to sanction his charging his interest in that manner and the partnership arrangement fell through under terms that witness should pay 17s. 6d. in the £ on the business liabilities which amounted to £525. He had heard that the other 2s. 6d. in the £ had been discharged by Mr. Woodall. Witness added that from 1885 to 1890 he served in H.M.'s army as a rough rider. He attributed his insolvency to his income having been insufficient to meet his household and personal expenditure, lack of employment, ill-health and to his inability to raise money on his interest under his father's will. The examination was concluded.

Diagonal Guillotine; Super Royal Press; Reel Wire Stitcher; 1-h.p. Nominal Gas Engine, by Crossley; Stereo Foundry; 2½ tons Type; Chases; Galleys; Cases; Wood Letter; Frames, Racks, etc. Also the VALUABLE LIBRARY of about 3,000 VOLUMES, including Old and Rare Editions in Vellum; also the School Furniture, Band Instruments, etc.

On view day prior and morning of Sale, and Catalogues of the Auctioneer, 71, Fleet Street, London, E.C.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

EDWARDS, W. J., HELSBY, J. B., and HUMFREY, R. N. P., trading as the Topical Press Agency, at 10, Red Lion-court, Fleet-street, London, E.C., photographers, etc. Debts by W. J. Edwards and J. B. Helsby, who will in future carry on the business. January 20th.

THE BANKRUPTCY ACTS, 1883 AND 1890.
RECEIVING ORDERS.

HOLT-WHITE, W., formerly St. James'-road, Sevenoaks, Kent, now of 13, Champion-grove, Denmark-hill, London, S.E., journalist and author. Date of order, January 24th, made on a creditor's petition. First meeting of creditors, February 6th, 11 a.m., and public examination of debtor, February 27th, 11 a.m., both at Bankruptcy-buildings, Carey-street, W.C.

CHEVERTON, T. P., trading as T. Cheverton, Bond-street, Cromer, Norfolk, printer and stationer. Date of order and of adjudication, January 25th, made on the debtor's own petition.

ADJUDICATION.

STOKVIS, L., lately trading as Lewis and Co., at 127, Fenchurch-street, London, E.C., advertising agent. Date of order, January 24th.

NOTICE OF INTENDED DIVIDEND.

SEGRUE, J. T., 1, St. Swithin's-lane, London, E.C., press agent. Claims by February 12th, to E. S. Grey, official receiver, Bankruptcy-buildings, Carey-street, W.C.

Digitized by Google

NOTICES OF DIVIDENDS.

NICHOLSON, J. H., 16, Chapel-street, and 18, West-street, Bridlington, stationer and librarian. First and final dividend of 8s., February 5th, at the official receiver's offices, 48, Westborough, Scarborough.

DAVIES, F. W., trading as W. W. Davies and Sons, at 51, Broad-street, Bristol, advertising agent. First and final dividend of 1s. 3½d., February 3rd., at the official receiver's office, 26, Baldwin-street, Bristol.

THORNLEY, A., Main-street, Cockermouth, Cumberland, printer, bookseller and stationer. Supplemental dividend of 11d., January 31st, at 34, Fisher-street, Carlisle.

APPLICATION FOR DEBTOR'S DISCHARGE.

DAVIES, E., 14, Bridge-street, Llanfaes, The Bulwark, and Lion-street, Brecon, and the "Times" Office, Merthyr Tydfil, printer and stationer. To be heard March 12th, noon, at the Court House, Town Hall, Merthyr Tydfil.

NOTICES OF RELEASE OF TRUSTEES.

BAILEY, F. B., 4, Bridge-street, Boston, Lincs., stationer, etc. Trustee, F. C. Brogden, official receiver, 10, Bank-street, Lincoln. Released December 12th.

PEACOCK, C. M., 42, Mote-road, Maidstone, formerly 13, Station-road, Reading, newsagent, etc. Trustee, R. T. Tatham, official receiver, 9, King-street, Maidstone. Released December 12th.

Printers' Managers & Overseers ASSOCIATION.

NORTH MIDLANDS CENTRE.

The North Midlands Centre held their usual monthly meeting at their headquarters, Queen's Hotel, on Saturday, 25th inst., when there was a record attendance, the accommodation of the room being taxed to the utmost to hear a lecture on the Linotype and Miehle, by Mr. C. Stern and Mr. G. E. Billington.

Mr. Stern was at a great disadvantage owing to a severe cold which made it difficult for him to speak, but in a short address he interested his audience in the features of the two-revolution printing press, illustrating by means of lantern slides the special points of the Miehle, drawing attention to the increased strength and general improvements of the new model now heing made in England.

At the close of Mr. Stern's lecture there was an animated and interesting discussion, taken part in by Messrs. Riddell, Pike, Morrell, Stokes and Wells.

The President, Mr. C. G. Budden, next called upon Mr. Billington to deliver his lecture on the Linotype, which was listened to with much attention, the lecturer being a fluent and ready speaker. Mr. Billington gave a short history of typesetting, tracing its development from the earlier times up to the latest models of the Linotype, paying attention to the early attempts at mechanical composing, tracing the developments of the various machines, mentioning amongst others the following names—Dr. Church, Windles, Hattersley's, a machine invented by a Manchester engineer in 1857, and in 1867 there was a machine invented by Fraser which was used for setting the Encyclopædia Britannica in Edinburgh. Coming to Dr. Mackie's invention which was worked upon the Jacquard loom principle (*i.e.*, a perforated sheet of paper). The Empire was referred to as being the first automatic spacing machine. Followed by the Thorne and Wicks typecasting machine, in 1887 Mergenthaler's Linotype came on the market, this being the pioneer of the original Linotype, to which many improvements have been introduced, the Linotype of to-day bearing little or no resemblance to the first model.

Mr. Billington then explained the making of the different models of the present day Linotype, which was excellently illustrated by a fine set of lantern slides. A detailed account of the working of the machine from the touching of the key to the casting of the slug was given and closely followed by those present. It was pointed out that some printers considered that the Linotype was only useful for straightforward matter, but this was not so, for in many instances the Linotype was being successfully used for jobbing work. If the samples shown were of value then the versatility of the "Lino" would now be recognised. There were many samples shown of tabular and complicated sheets of typesetting which created much interest.

The usual vote of thanks was proposed by Mr. A. E. Moore (Vice-President), and seconded by Mr. W. Wesson, secretary, Typographical Association, who paid a high compliment to the ability of the lecturer, and the excellency of the machines, also to the value of these lectures, which were doing a great work along educational lines amongst the printers in the district, as evidenced by the number of Linotype operatives who came to the meeting direct from their various offices.

Mr. Stern and Mr. Billington suitably replied, bringing a most interesting evening to a close at a late hour.

The Scottish Printing Dispute.

The conference between the Master Printers of Glasgow and Edinburgh, to which both sides have been looking for a settlement of the matters in dispute, was held on Monday at the Central Hotel, Glasgow, when the representatives of employers and employed had a prolonged meeting, to which the Press was not admitted. It was intimated, however, at the close that no agreement had been come to, and that, in consequence, the masters proposed to lock out the men as from Saturday, February 15th next. The men's officials state that the rules, which are the subject matter of dispute, were passed by a delegate meeting of the association as far back as June, 1911, and that they are in operation in every town in Scotland except Glasgow and Edinburgh.

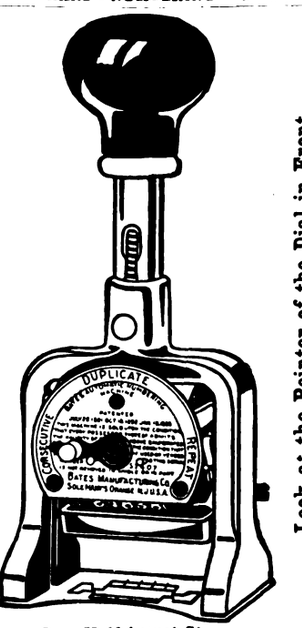
The Typographical Society has issued notices that under no circumstances shall members work any overtime nor start work on night shifts in either Glasgow or Edinburgh.

St. Clements Press Photographic SOCIETY.

The second annual Bohemian concert of the above society was held on Thursday evening, January 23rd, at the Smith Memorial Hall, Portugal-street, Kingsway, W.C. After letters had been read from Mr. T. M. Bridgewater (president), Mr. George E. Brown, editor of the *British Journal of Photography* (vice-president), and Mr. Leo Weinthal, editor of the *African World* (vice-president), expressing their regret at not being able to be present,

Mr. George Eaton Hart (vice-president), in opening the proceedings, said he thought the Society was to be commended for providing an evening of music. It was a noteworthy feature of to-day that the recreations of working people were of a more elevated nature than had formerly been the case. Music, he assured them, was one of the best means of lifting people out of the monotony of their everyday lives. He felt that the St. Clements Press Photographic Society served two purposes—it was a source of great interest and pleasure, and it was also instructive as regards the trade to which its members belonged; for photography in its scientific aspect had a great future in connection with the development of the printing trade.

The programme under the able direction of Mr. H. Axtell, was both varied and excellent, and included Miss B. J. Maggs (soprano), Mrs. H. Axtell (contralto), Miss A. Burrell (songs at the piano); Mr. A. Hill-Shears (tenor), Mr. Sydney Hart (baritone), Mr. Frank Latimer (bass); St. Clements Quartette (part songs); Messrs. Will Green, Fredk. Wickes, and Geo. Wonfor (humorists); Messrs. A. Smith and F. Robson (banjo duets); and Mr. C. H. Hardy (pianist). During the evening Mr. W. Turner (committee) concisely reviewed the work and history of the Society.



The hon. secretary, Mr. Albert Maule, and the committee, are to be congratulated on bringing to a successful issue an excellent entertainment.

IF you expect to be able to trace profitable results to every advertisement you run you will be disappointed. It is the general cumulative effect that pays in retail advertising.

A GOOD SALESMAN.—Mayor Fitzgerald, of Boston, relates an incident which occurred while he had occasion to stop at a country hotel in Connecticut. In a conspicuous place in the parlour was an inscription: "Ici on parle Francais." The mayor, as he noticed the sign, turned to the proprietor and said: "Do you speak French?" "Not me," the man replied. "United States is good enough for me." "Well, then," said the mayor, "why do you have that inscription on the wall? That means 'French is spoken here.'" "You don't mean it," exclaimed the hotel keeper. "Well, I'll be darned. A young chap sold that to me for "God Bless Our Home.'"

LECTURES ON THE
History of Printing and Bookmaking.

In his third lecture on "The History and Progress of the Arts of Printing and Bookmaking," at the St. Bride Foundation Institute on Monday evening, Mr. R. A. Peddie, librarian of the Typographical Library, covered the seventeenth century in a very interesting address, illustrated with lantern slides and examples of seventeenth century printing from the library.

The seventeenth century, said Mr. Peddie, was not one of the most interesting periods in the history of printing, for it had ceased to be an art, and had become merely an appanage of politics and theology. In many countries it was under the domination of State control in a form which simply limited its work. That was emphasied very forcibly by the fact that typefounding itself was, in England, by a decree of the Star Chamber in 1637, limited and placed under the control of the Archbishop of Canterbury and the Bishop of London, and any other six commissioners they chose to join with them. Luckily, the Star Chamber decree only lasted some three years, and from 1640 to 1643 there was to some extent free trade. From 1643 to 1662 typefounding was free, there being no limit to the number of typefounders, with the result that the trade picked itself up considerably. In 1662 one of the Acts of Charles II. reimposed the restrictions on typefounders.

No typefounder's specimen book is known during the sixteenth century. Several typefounders, notably in England and Holland, issued type specimen sheets with specimens of their types, somewhat larger than the broadside issued by Erhard Ratdolt, in 1486. The first printer's type specimen book, showing an assortment of type, was issued in 1616, by Fuhrmann, of Nuremberg. Another was issued in 1628.

The first slide shown on the screen was a picture of a typefounder from Moxon's Mechanick Exercises, dated 1683, and the lecturer remarked that it was not till 1830 that a machine supplanted this hand method of typecasting.

Following the plan he had adopted of taking the devolopment of each type century by century, Mr. Peddie pointed out that there was no advance in roman type during the seventeenth century, the types invented in the previous century remaining the standard types. Moxon was a typefounder and publisher. He drew up a series of regulations for designing type, and his attempt to regulate the roman letter design seemed to have been very successful. But no real roman type was evolved during the seventeenth century. In France, towards the close of the century, a new type was designed, but it was based on previous designs and was degraded.

Italic type suffered loss during the period under discussion, although here and there a few fine founts were to be found. Fine printing in the seventeenth century was no doubt done in black letter, or gothic, because it was the official type. The Germans did not use roman type at all in the seventeenth century. In 1640 there were no less than four different varieties of Anglo-Saxon type used. Irish type was used in Dublin up to about 1650, and late in the seventeenth century Irish type was cut by Moxon.

A passing reference was made to music type, and a slide was shown of two pages of a liturgical book printed at Rome, the lecturer remarking that it was only towards the end of the seventeenth century that a method of printing music from engraved plates was introduced. Pierced initial letters, he said, were used right through the seventeenth century, and this led to a consideration of title-pages, many interesting examples of which were thrown upon the screen, demonstrating that the majority of title-pages of this period were based on an architectural motif. Among these was Heywoode's famous "Nine Varieties of the Histories concerning Women," which, the lecturer incidentally observed, was quite appropriate to the present time.

There was very little copperplate printing during the sixteenth century, but towards the end of the century it began to be used, and during the whole of the seventeenth century it went on increasing, so that towards the close wood engraving might be said to be dead. Illustrations by good artists were always put on copper.

Turning to the birth of the newspaper, Mr. Peddie observed that one of the earliest newspapers known was published at Antwerp, in 1616, by Abraham Verhoeven. The earliest specimen known of an English newspaper was dated 1622, though an earlier copy is registered by the Stationers' Company. This was the *Weekly Newes*, published by Nicholas Bowne and Thomas Archer. Pamphlet literature was specially prevalent during this century, the collection in the British Museum numbering 25,000. They were sold in the streets at about 4d. each.

Until 1639 there was no provincial press in this century. In 1642 a press was permanently started in York. English provincial printing was entirely killed by regulations and Government interference. In France the National Printing Office was established in 1640 and produced very good work indeed. In Holland there was the Elzevir Press, at Leyden, which was famous for two things—the correctness of the press and the distinctness of its work. It was connected with France and probably must be considered French. The book of the seventeenth century showed two tendencies, both to a larger and to a smaller size than in the previous century.

After drawing attention to the hand press used in the seventeenth century, views of the Blaew and the Daye presses being shown on the screen, Mr. Peddie concluded his lecture with some remarks on the literature of printing, which begins in this century. Moxon was the first to issue a work on practical printing, and a copy of that rare book, from the St. Bride Library, was exhibited.

Some questions at the close of the lecture having been answered, the company then inspected the interesting array of seventeenth century books arranged on a long table in the order in which they were referred to in the lecture. They began with the various types in use, showing the way the roman type became degraded during the century, till it almost reached the lowest ebb possible from an artistic point of view. These were followed by examples of title-pages, illustrations, and then the practical books on printing.

Next Monday Mr. Peddie will deal with the eighteenth century, the rise of the publisher, the revival of fine printing, the growth of the newspaper, and Bewick and wood-engraving.

CHRISTMAS
Auto Stationery and Easter Cards.

It is remarkably early even for a trade paper to talk about greeting cards for next Christmas, but Messrs. Raphael Tuck and Sons have called our attention to the fact that they have already completed their sample book of Christmas Auto Stationery for 1913-14, and we have had the pleasure of going through the examples of the beautiful collection that has been produced. There is good reason for having them ready for the market so exceptionally early, and it is one that the retailer will appreciate. His knowledge of what is right to buy is probably better now than it will be later in the year, because his experiences of the leading preferences of his customers during the so lately passed Christmas season are fresher in his memory.

Auto stationery has proved very popular, as we felt sure it was bound to do when Messrs. Tuck and Sons introduced it, because it is something more refined than the ordinary Christmas card and yet more personal and considerate than the formal private Christmas card with the machine-printed signature.

A very heavy line has been provided, the sample book containing about 400 different numbers, ranging in price from 50s. per dozen down to 4s. per gross. Every conceivable taste seems to have been provided for, and a wonderful fund of artistic ingenuity and skilful workmanship has been brought into play.

Starting with the more expensive numbers, a novelty is the introduction of real mother-of-pearl into the design, with a little hand-painted floral spray showing through the nearly transparent material. It takes various shapes, one of the prettiest being that in the form of a pendant jewel. Then in the general collection a new style that appears at various prices is suggestive of the beautiful work of the illuminated text artist. It is the rendering of a motto or seasonable wish in heavy black letter with large coloured initials, and a very elegant and intricate line design decorating the background and left margin. It is quite a distinctive style, and one that is sure to be widely appreciated. Another pretty idea is a red seal on which dainty little flower designs are hand-painted, and this on an English hand-made paper makes a charming combination. "L'Art Moderne" is the title given to an entirely different style—parchment folders, bearing beautiful figure designs, and little coloured views, and to these metal charms are attached. There are several other numbers in hand-made paper to which charms are secured, and mottoes or wishes are embossed in large script letters. Imitation tapestry is the motif of another style, and it is very tastefully treated. Appealing to admirers of the beautiful Wedgwood ware is a capital new series of choice designs in clever imitation of the ware. The cards that belong to the sixpenny boxes are truly wonderful value, and offer ample scope for the enterprising retailer to bring credit to himself for the high-class quality of his goods, and to make a handsome profit. Some of these numbers are the elegant hand-made folders, with wishes in script type, that formerly figured among the higher priced cards. The collection also includes some Masonic designs and some handsome Madonna studies in rich colouring. It may be added that two new prices appear in the book, namely, at 6s. and 10s. per dozen boxes.

The Easter cards are a wonderful line. Refined taste, artistic perception and the religious atmosphere appropriate to this great church festival are represented in an admirable manner. Combined with this the best art of the printer and the papermaker have been brought into play in the production of a fine collection in which there is not one false note. There are 250 numbers at various retail prices from 1s. each down to the popular penny cards. Hand-painted floral designs of a high degree of artistic merit figure largely in the collection, and a pretty embellishment is the attachment to many of the cards of a solid metal cross charm. Semi-opaque celluloid has been introduced into some numbers with pleasing effects, notably in the soft, mysterious effect produced when covering a design of a large cross. Designs of crosses are utilised in a variety of ways, in parchment, in velvet, in imitation tapestry, and other effective material. There is also a capital assortment of comic designs that will appeal to children. The latter part of this sample book is occupied with a nice selection of Easter post cards in all sorts of pleasing designs providing for every taste and sentiment.

Wholesale Stationer's Advertisement
200 YEARS AGO.

The following announcement appeared in the London *Daily Courant* of May 10th, 1717. It will be noticed that the paper dealer was a lady, whose place of business was in the same locality as that which still forms the centre of the London wholesale stationery trade. Amongst the sorts enumerated, it will be noticed, is a "Colebrook-size" cap, a term we do not remember to have come across before, perhaps derived from the first introducer thereof:—

"At a Warehouse in the Timberyard at the lower end of Castle Alley near Trigg-Stairs in Thames Street, London, any shopkeepers, Printers, Grocers, Tobacconists, or other Tradesmen, may be furnished with any sorts of English made paper, fine or coarse, viz., Demy, Crown, Foolscap, Pott, Lumber-hand, Large-hand, Middle-hand, Small-hand, Bag-cap, Large Colebrook Size Cap, Middle-size Cap, Grocers Four Pound, Paste Four-Pound, White and Brown Pound and Half-Pound and Blue Paper, by Wholesale or Retale, By Eliz. Fry."

THAT the picture post-card originated in Nuremberg is disputed, though the German city has been preparing to celebrate the thirtieth anniversary of the advent of such a card. The distinction of making and mailing the first is claimed by Leon Besnardeau, a bookseller of Sille-le-Guillaume, near Conlie, Department of Sarthe, France. In 1870, during the war with Prussia, he printed pictures on postal cards he was sending to clients. M. Besnardeau is still alive, and there are many of his old customers in France who have the cards as he posted them. The Germans, it is claimed by the Besnardeau partisans, adopted the idea for the Nuremberg Exposition in 1882.

A Foulis Exhibition.

The Glasgow *Herald* announces that the Glasgow Bibliographical Society have arranged to hold a Foulis Exhibition, and the University has kindly agreed to provide accommodation for it within the University during the month of April. Admission will be free. The society desire to make the exhibition as complete as possible, and any help with exhibits will be gladly welcomed. The following sections have been provisionally agreed upon:—Books printed in Glasgow before 1740; Foulis books; the Foulis Academy of Art; Alexander Wilson and his typefoundry; personal history and portraits of the Foulises; personal relics of the Foulises; and friends of the Foulises. The society have already received intimation of several exhibits of great interest, and they believe that the exhibition will throw considerable light upon the literary history of Glasgow, as well as illustrate the development of printing within the city for a century and a half after its introduction. Those who are willing to lend books or other exhibits are asked to communicate with Mr. J. C. Ewing, librarian of Baillie's Institution, 153, West Regent-street, Glasgow, as soon as possible.

IT was a very hot day and the traveller for a well-known printing ink firm rushed to Liverpool-street Station to catch the 12.20 for Stratford; he got through the gate at just 12.21 and the ensuing race was watched by the people on the station, and by some of the passengers in the departing train. Failing to make up on it the knight of the road wearily sank into a seat at the end of the platform, when a young porter came up and remarked, "Mister, was you trying to catch that Stratford train?" "No, my son," replied the ink man; "No, I was merely chasing it out of the station."

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

CYLINDER DUST BELLOWS
(Invented).
No more Short Circuits in Cleaning Electrical Machinery.

NEAT, LIGHT, DURABLE
USED THE WORLD OVER.
Invented and Manufactured by
Trade Mark No. 270,725.] AUGUST KRAUSHAAR.
For sale in six different sizes by the leading electrical and technical supply houses, felt, TYPE FOUNDRIES, hardware, machine and piano supply houses in the country. These Bellows have no metal mountings, the nozzle as well as body is made of wood, precluding short circuits or injury of any kind. They are very light and almost indestructible. Produce with one stroke 1^{s} to $5^{0.05}$ cub.-dec. of strongly compressed air, which removes all dust particles from the most inaccessible places.
AUGUST KRAUSHAAR, Hanau a/M. (Germany), 155.

Imitation and Genuine Kraft Papers.

By Sindall and Bacon.

The virtues and properties of the genuine kraft papers are so well known, being peculiar characteristics of this class of wrapping, that it is not surprising to find imitations put forward. These imitation krafts are now so well made, and got up with a finish and colour bearing such a strong resemblance to the genuine material, that it is not always easy to distinguish them.

The paper agent, continually handling both classes of material, is usually able to discriminate between the two on account of his experience and knowledge obtained in his business. He judges the genuineness of a kraft paper in most cases by its characteristic shiny appearance and its special flexibility when crumpled.

The manipulation of the wood pulp used in the manufacture of the imitation kraft has been modified from time to time in order to make it more difficult to detect the differences between it and the genuine article. This applies not merely to the actual processes of manufacture, but also to the kind of raw material treated. The same wood is now used for the production of the genuine and imitation krafts, the chief difference being in the process employed for reducing the wood to pulp.

For the *real* krafts spruce or some similar coniferous wood is converted into pulp by the sulphate or soda process; whereas in the case of the *imitation* kraft the wood is treated by the sulphite process. The colour of the pulp obtained in the latter case varies from reddish white to reddish brown according to the extent of the treatment, while with the genuine krafts the natural colour of the finished pulp is a light brown. The differences in manufacture are mainly concerned with methods used in beating the boiled pulp.

For the moment we are concerned in discussing laboratory methods for comparing genuine and imitation kraft papers, assuming that these are so much alike as to render the differentiation by mere inspection an extremely difficult task.

A complete examination of the two papers for this purpose involves measurements of the *physical* properties of the paper, such as strength, resistance to crumpling, bursting strain, etc.; and the application of methods of investigation for *chemical* differences, if any.

The physical constants and chemical tests which we propose to discuss must be taken as suggestive for a more thorough investigation of the subject than as an absolute and certain method of testing a single paper.

We have had occasion to compare imitation and genuine krafts with a view of finding such differences as would enable us to take any single paper and describe it as genuine or imitation in precise terms. That is to say, it was found necessary to find methods of analysis which would to a large extent do away with the personal factor which has hitherto played an important part in deciding whether a paper was a genuine kraft or otherwise.

Physical Constants.

A careful comparison of the two papers in terms of tensile strength, bursting strain and resistance to crumpling, reveals at once the marked superiority of a genuine kraft paper.

Taking a large number of cases we have found that the tensile strength of the paper is 30 per cent. greater and the bursting strain between 40 per cent. and 50 per cent. greater. The genuine kraft also has a greater resistance to crumpling, and this is no mean advantage when we consider the uses to which papers of this class are put, namely wrapping and packing.

In the following table the differences in tensile strength are clearly indicated, the results shown being given not only in terms of the number of pounds required to fracture a strip one inch in width, but also in terms of the breaking length so that the slight variations in the substance of the paper may be allowed for :—

TABLE I.

IMITATION.			GENUINE.		
Weight per ream, 20 by 30.	Tensile strength, strip 1-inch wide, Mean.	Breaking length, Yards.	Weight per ream, 20 by 30.	Tensile strength, strip 1-inch wide, Mean.	Breaking length, Yards.
20·8	9·85	3,800	19·7	18·4	7,456
24·6	13·60	4,422	21·3	19·4	7,288
30·8	20·30	5,272	32·0	21·6	5,400
33·6	22·20	5,286	36·6	28·4	6,207
35·5	24·10	5,431	39·4	27·2	5,520
41·7	29·00	5,560	47·0	31·4	5,344
		4,962			6,202

In the same way the measurement of the bursting strain as determined on a diaphragm paper testing machine is given in Table II.,

TABLE II.

IMITATION.			GENUINE.		
	Bursting Strain.			Bursting Strain.	
Weight per Ream 20 by 30 lbs.	Lbs. per square inch.	Calculated to paper substance 100 lbs.	Weight per Ream 20 by 30 lbs.	Lbs. per square inch.	Calculated to paper substance 100 lbs.
20·8	13·5	64·90	19·7	30·3	153·0
24·6	17·3	70·32	21·3	34·3	161·0
30·8	25·6	83·11	32·0	32·0	100·0
33·6	29·0	86·31	36·6	47·5	129·8
35·5	30·6	86·20	39·4	42·3	107·3
41·7	39·1	93·76	47·0	54·0	114·9

the results being calculated for the purpose of comparison to a common standard, namely, the number of pounds per square inch required to burst a sheet of paper having the calculated or uniform weight of 100 pounds demy.

(To be continued.)

About Modern Printing.

Mr. Herbert L. Baker, of the C. B. Cottrell Co., and one of the best known printing experts in the United States, recently gave a lecture, at Harvard, on "Modern Printing," in which he said: "Perfected modern printing is less than thirty years old. It really dates from the time in the early eighties, when means were found for etching cheaply with acids on metal what the engraver had previously cut slowly and expensively on wood. Quickly followed the 'half-tone' etching, which exactly reproduced the photograph for the first time in history. Then came the bewildering development of colour-printing and other processes innumerable. Along therewith came new inks, new papers, new machinery, in breath-taking succession. Rotary presses made possible fine illustrated magazines at a popular price, and a national periodical literature was born. With nationally circulated periodicals came nation-wide demand for advertised articles. This made necessary thousands of catalogues showing goods not everywhere in stock. Printing received a tremendous impetus and increased until it now ranks as a great industry. Competition for trade has produced more and more expensive campaigns of advertising with printed matter in enormous editions. Special machinery has been devised to meet all the varying demands for printing and binding, in order to secure higher quality, and at the same time reduce the cost. One printing press concern alone has in its vaults. accumulated during the last twenty-five years, designs and drawings of improved machines which cost more than one and a half million dollars. And every department of printing machinery manufacture can tell similar tales. The process of development is still going on.

"But where to find the men to so manage these marvellous facilities as to get the most out of them and thereby translate them into terms of highest usefulness to humanity?

"Thirty years ago the implements of printing were few and simple. There were only a few styles of type, only two or three types of presses; but a few varieties of paper and ink: work was mostly by hand, and the whole gamut of facilities and processes simple and easily learned. A boy had plenty of time to learn the entire trade, go into business, learn the business end by hard knocks, and win success before becoming grey. But now—well, a boy has not sufficient time to learn more than one small branch and become a specialist in one department. There is too much to learn for one to grow up through the practical departments of the business into the commercial end with hope of large success.

"And yet the commercial end requires trained men as never before. The growth of great printing and publishing concerns calls insistently for trained men to manage their manufacturing and business departments. They must perforce be bigger and broader men than those who have spent their school years in learning the rudiments of a trade. Here a new profession develops, one requiring just as big men and just as much training as any other profession—an 'architect of the printing business,' not laying brick or cutting stone, but knowing how to get practical results—a 'musician' who knows the possibilities of all the instruments of the printing art and able to direct them into mighty business harmonies."

DIRECTOR RALPH, of the U.S. Bureau of Engraving and Printing, and his official inventor have just perfected, after years of experimental work, an ingenious machine for printing postage stamps from a web of paper, just as newspapers are printed. If the machine proves as successful as its inventors believe, it will save the American Government nearly $300,000 a year.

23, ABCHURCH LANE, LOMBARD ST., E.C.

TO TRADE BOOKBINDERS, BOOKBINDERS' PLANT AND MATERIAL MANUFACTURERS AND DEALERS, PUBLISHERS, LIBRARIANS, AND OTHERS INTERESTED IN THE BOOKBINDING INDUSTRY.

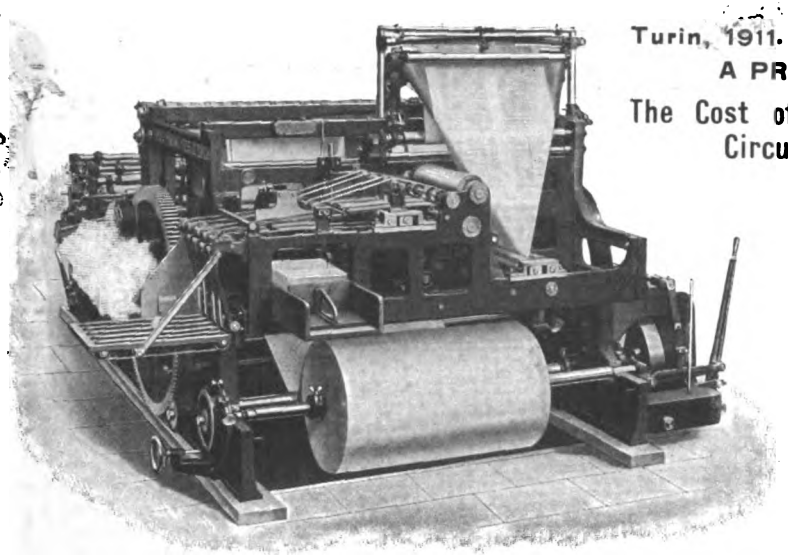
THE Publishers of the *BRITISH AND COLONIAL PRINTER AND STATIONER* have pleasure in announcing that an ILLUSTRATED MONTHLY SUPPLEMENT to that journal is now devoted to matter concerning the BOOKBINDING TRADES.

All branches of bookbinding are dealt with, from practical and technical standpoints, and the historical and artistic aspects of the industry also receive attention. Illustrations of hand-tooled bookbindings and publishers' cases which are remarkable for their artistic design, their historic interest, or their novel character are presented from time to time.

The BOOKBINDING SUPPLEMENT appeals to all those who are interested in bookbinding, whether as a trade or as an art, as all phases of the subject receive their due share of attention in its columns.

The Editor will welcome any news of trade interest that may be sent him, and is prepared to consider original articles of a technical and practical character, with a view to their publication. Information concerning the working of the technical classes in bookbinding, and notices of meetings of trade unions and other bodies associated with the bookbinding industry, are also invited; arrangements can usually be made, if desired, to report the latter, as well as lectures, etc., for the BOOKBINDING SUPPLEMENT. Illustrations and particulars of new machinery and appliances, and information concerning new materials and methods for use in the trade, are likewise of interest. The publishers having no end to serve save the presentation of matter of value to the various branches of the trade, the pages of the BOOKBINDING SUPPLEMENT are open to all, employers and employed, unionists and non-unionists, for the free discussion of trade matters.

As far as READERS are concerned, copies of those issues of the *British and Colonial Printer and Stationer* that contain the BOOKBINDING SUPPLEMENT are supplied at the rate of 2/6 *(payable in advance)* for twelve numbers, including postage. (Foreign postage 6d. extra.) Single copies, 2d. each.



With regard to ADVERTISEMENTS, the bookbinding trade announcements are placed in a POSITION NEXT TO OR FACING READING MATTER in the BOOKBINDING SUPPLEMENT. ADVERTISING RATES sent on application. Arrangements have been made to circulate the journal in quarters likely to be most productive to advertisers of a return for their outlay, and no effort is spared to study the interests of advertisers and readers alike.

Orders for advertisements in and subscriptions to the BOOKBINDING SUPPLEMENT issues should be addressed to the publishers:—

STONHILL AND GILLIS, Offices of the *British and Colonial Printer and Stationer*, 58, Shoe Lane, LONDON, E.C.

Throw the Stereo Rotary on the Scrap Heap

Turin, 1911. **Grand Prix.**

A PRESS FOR EDITIONS UNDER 12,000.

The Cost of Stereotyping of a Newspaper of Medium Circulation amounts to about £250 a year.

This sum is saved annually by the

SWISS-DUPLEX,

which delivers direct from type forms 5,500 to 6,000 complete copies per hour of 4, 6, or 8 pages, printed, pasted, folded, and counted, without stereotyping. Our Swiss-Duplex Type 1910 is a considerable improvement on every other system, and is guaranteed to yield faultless work on any printing paper, equally as well as any other Rotary. The new path of web avoids splitting and makes possible accurate register. The SWISS-DUPLEX has stood the test of 20 years' service, and is the most useful and practical Flat-Bed Rotary in the World. The smart publishers have printed medium sized editions for years on the SWISS-DUPLEX, and have discarded the Stereo Rotary, consigning it to the lumber room.

Any printing press engineer is able to fit up the machine. Detailed plans of erection and hints to pressmen are supplied.

Quick Delivery. Easy Terms. Send for Prospectus, Testimonials and Price.

THE

MONOTYPE MAGAZINE

Weight 30 ozs.
Contains 225 Matrices.

"The word Monotype means much more than the name of a machine

It includes a complete system of Composing Room practice based on the work of the Monotype both as a Composing Machine and as a Type Caster.

"We may well say that the Monotype system has been made by Printers for the use of Printers. The makers of the Monotype claim no credit for the discovery of new processes. They have but perfected new methods of using the processes that have stood the test of time. The printing industry was born when movable types were invented, and so long as quality and economy count in that great industry, movable types will be used and new application will be found for

The Monotype System."

Composed and cast on the Monotype.

E & S "ALBERT GALVANO" QUALITY

WHAT IS AN ELECTRO

As applied to Colour Printing?

Last month it was shown that an A. G. (Lead Moulded) Electro is an exact duplicate of the original—possessing all the fine printing qualities of the original. Following this line of reasoning a step further, it will be seen that since each electro is an exact replica of its original, colour electros by this process must register perfectly.

We Want You to Grasp This:

If you take, say, four or eight sets of these colour electros, they are so perfect that, taken colour for colour, they are not only interchangeable amongst themselves, but also with the original.

Another point—It is impossible for the process engraver to produce duplicate originals of colour blocks that are identical in colour values with the first (original) set, no matter what price you pay.

Albert Galvanos are absolute facsimile, and show a saving of approximately 75% over the cost of these less satisfactory duplicate originals.

THE BRITISH & COLONIAL PRINTER AND STATIONER

FOUNDED 1878. PUBLISHED WEEKLY.

[Registered at the General Post Office as a Newspaper for Transmission in the United Kingdom.]

THIRTY-FIFTH YEAR.

VOLUME LXXII. NUMBER 6.

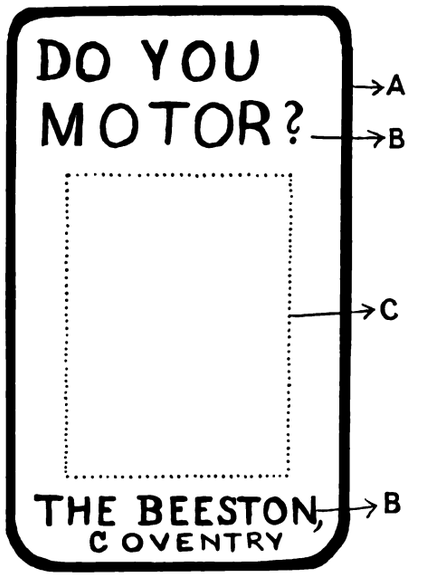
LONDON: February 6, 1913.

EVERY THURSDAY. PRICE TWOPENCE.

Nottingham University College.

Typographic Technical Classes.

The students attending the special advanced class for printers at the University College, Nottingham, recently had an interesting and valuable paper on "Advertising," read to them by Mr. J. A. White, from the office of the *Nottingham Guardian*.



Mr. White dealt with his paper in an interesting and instructive manner, pointing out the great advantage the compositor has in becoming an efficient advertisement writer, for given the ability to benefit by a course of instruction on how to write an advertisement, his workshop training would enable him to plan and lay out an advertisement in such a way that the "comp" would have no difficulty in following the sketch and instructions. Mr. White prepared a few sketches which illustrated many of the points dealt with in an admirable manner. The following is a summary of the paper:—

In speaking to you this evening upon Advertising I do so as a printer, and from the printer's point of view, in the hope that these few remarks may prove of interest to you and tend to infuse some amount of enthusiasm for this important branch of the printing trade. As you are well aware, owing to the propaganda work carried on by various schools of education, any Tom, Dick, or Harry has been coached to become successful advertisement men, whereas the poor printer in many cases knows little, certainly not enough, of the art of business pulling. To my mind the right man for advertisement writing and designing is the practical compositor, the one who thoroughly understands all the technicalities of the case as well as its limitations. I propose to divide my lecture under several headings, amongst which will be the following: Designs, choice of types, the selling or principal parts of an advertisement, margins, balance, etc.

Designing.

As you well know designing an advertisement consists in sketching the framework, indicating the principal head lines or selling points and showing at the same time what margins or space you propose to allow for the text or body matter. Much care should be exercised when designing an advertisement, the simpler they are the more effective will they be. One or two display lines are far more effective and certainly easier to read than a host of so-called display which frequently crowd one another, and result in a mass of displeasing lines. The man who runs should be able to read is a very trite saying, and what is true of poster advertisements applies equally well to other and smaller announcements.

The first step in designing an advertisement is to sketch the full size, *i.e.*, the outline: (A), next choose the border, sketch in the principal display lines (B), and indicate what space the text or body matter will take up (C).

Choice of Types.

This is a very important step and should be carefully thought out. The article advertised, the medium in which it is to appear, all play a part, or should do, in choosing the dress of an advertisement. If the article is of the artistic kind and the medium a high-class magazine, the use of more ornate type is advocated, whilst should the advertisement be intended to appear, say in the local press, and representing some useful household commodity, plain outstanding type will be the most suitable. Avoid the use of too much italic as well as the spotty appearance bold-faced type gives an advertisement when used too frequently in the text or body matter. Italic head or sub head-lines can frequently be used with advantage as a contrast to the other faces and bolder faced type to give emphasis without involving any loss of space.

Initials, as you all know, are really survivals of the medieval period, when books illuminated by hand were more common than they are at the present time. Still they fill a very necessary want in some advertisements, especially those in which much text is used without a heading. They then perform the duty of acting as the starting post in directing the reader's eye to the beginning of the advertisement. The initial should be in strict conformity to the face of type employed, that is light where light-faced type is used, and heavy when used with bolder faced letters.

Paragraph Marks.—These signs are frequently employed in good class advertisements at the present time, and are advocated when it is necessary to break up a solid mass of text or body matter which would otherwise convey the idea of monotony. They are especially useful when it is intended the advertisement should resemble the printing of olden days.

Proper Type for Headings.—Type that is easily read, presents a clear surface, is strong, devoid of ornamentation, should be chosen as the most suitable face to use. Generally speaking, fancy type for headings weakens the advertisement unless it has some direct connection with the article or subject under review.

The Use of Sub-Headings.—The minor display lines, termed sub-headings, should be subsidiary to the main features, yet at the same time ought to have a direct bearing on those features, consequently the type chosen must belong to the same family. They should be just large enough to give sufficient emphasis or prominence to each section of the advertisement, and yet remain subsidiary. Sub-headings are very useful in conveying a new idea as well as in breaking up the solid, uninteresting aspect of the advertisement.

The Text or Body Matter.—Readableness of type should guide the compositor when setting up the text. As that part of the advertisement whose chief function is the giving of details it is, very necessary that it should be neat in appearance and in contrast to the general display. Where there is very little text it is permissible to use display type, but great care should be used in choosing same.

Spacing Out.

Balance, or the symmetrical adjustment of the various parts of the advertisement, needs careful handling. Avoid getting the advertisement top-heavy, bottom-heavy, or too strong in the display or selling values. Attention must also be paid to the spacing between rules and borders. Try to place your wording so that it will appear even throughout, and always remember the fact that in advertisements there is no real centre, the centre being just above the half-way line. The proper placing of blocks requires careful handling, for it is in this respect that much unevenness is practised.

Selling Parts of an Advertisement.

Instead of wondering what you should throw up or keep down, try to find out what the selling parts of the advertisement you have in hand really are. It is just possible there may be only one, or there may be perhaps four or even six. These you will find are the parts that require your attention in the matter of display. In the case of a well-known trade mark that will form one of the selling points, the heading is another, the price another, text and name and address of the advertiser are yet other points, all of which can be found if carefully looked for. Take the advertisement where the price is a cutting one, *i.e.*, much reduced, it will become apparent at first glance that that will form the main feature of the advertisement and should be made much of. Perhaps, again, it is the brand of the article that is well known, or may be the firm's name is known as that of an honourable house, these will all prove selling parts.

Digitized by Google

Others can be picked out if a little forethought is practised when sketching out the advertisement before setting up into type.

It should always be borne in mind that an advertisement owes its value to the selling points shown, as well as to the quality of the display, the illustration, or the adaptation of a good heading, set in type suitable to the occasion.

Some Final Points.

Always bear in mind that the chief purpose of display is to attract the favourable attention of the reader, when it will be readily understood that it must "please the eye," throw up the chief features, and, in short, make the advertisement a pleasurable one to read.

You can attract attention in many ways, such as by an unusual appearance in the shape, by the contrast between the light and dark portions, by unusual spacing out, etc., as well as by strong, business-pulling headlines, and readable copy.

The Cleveland Guild Exhibition.

The members of the Cleveland Guild of Printers, Lithographers, Bookbinders, and Kindred Arts and Crafts announce an exhibition to be held at Middlesborough, on Friday and Saturday, April 17th and 18th next, when prizes will be offered for the best examples of work sent in. The following is the schedule of the competitions as they apply to the printing portion :—

Section B.

Artists.—Best design suitable for reproducing as a 16-sheet poster in four printings. Subject: Metal polish; size of design, 30-in. by 20-in.; wording left to competitor. First prize, value 21s.; second, value 5s.

Artist Apprentices.—Best design for jam label in three printings; size of label 4-in. by 5-in. upright. Copy supplied by executive council. First prize, value 5s.; second, value 2s. 6d.

Engravers.—Reproduction of steel or copper-plate engraving, to be reduced to one-third of original size as zinco. Copy supplied by executive council. Proof to be submitted along with block. First prize, value 7s. 6d.; second, value 2s. 6d.

Section D.

Compositors.—(*a*) Front page of catalogue cover (laundry), 7½-in. by 10-in. upright, not more than two printings. Stock blocks and ornaments allowed. Specially engraved blocks and tint plates excluded. Choice of colours of paper and ink left to judgment of competitor. Six proofs to be pulled on 7½-in. by 10-in. paper. Copy supplied by executive council. First prize, value 15s.; second, value 5s.

(*b*) Newspaper advertisement, 8-in. deep, double column (*N.E. Daily Gazette* standard of width), in black ink. Copy supplied by executive council. Six proofs pulled in centre of 11¼-in. by 8¾-in. white paper. Stock blocks may be used. First prize, value 10s.; second, value 5s.

(*c*) Best three posters done during the year. Any size from double crown folio upwards. First prize, value 10s.; second, value 5s.

(*d*) Best mould and stereo plate (unmounted) from crown 4to form, which will be supplied by the executive council. Competitors to send one printed impression from plate, on 7½-in. by 10-in. paper. First prize, value 10s.; second, value 5s.

Apprentice Compositors.—(*a*) 8¼-in. by 5¼-in. upright circular in two printings. Colours of ink and paper at discretion of competitor. Copy supplied by executive council. (For senior apprentices, 18 to 21 years of age.) First prize, value 5s.; second, value 2s. 6d.

(*b*) 8¾-in. by 5⅝-in. upright handbill in one printing. Colour of ink and paper at discretion of competitor. Copy supplied by executive council. (For junior apprentices up to 18 years of age.) First prize, value 5s.; second, value, 2s. 6d.

Letterpress Machinemen.—(*a*) Best twelve impressions from form containing half-tone block, stereo, electro and type, black ink, white paper. Make-ready to be submitted along with impressions. Form and paper supplied by the executive council. First prize, value 10s.; second, value 5s.

(*b*) Best six specimens of jobs worked during the year. First prize, value 10s.; second, value 5s.

(*c*) Best six impressions from three-colour blocks. Blocks and paper supplied by executive council. First prize, value 10s.; second, value 5s.

Letterpress Machine Apprentices.—(*a*) Best four specimens of jobs worked during the year on a platen machine. (For junior apprentices up to 18 years of age.) First prize, value 5s.; second, value 2s. 6d.

(*b*) Best six impressions on white paper, in black ink, from form containing half-tone block and type, worked on a cylinder machine. Make-ready to be submitted along with impressions. Form supplied by the executive council. (For senior apprentices 18 to 21 years of age.) First prize, value 7s. 6d.; second, value 2s. 6d.

Section E.

Litho Transferers.—Best four specimens of jobs done during the year. Transfers to have been pulled, put on stone or plates and proved by the competitor. First prize, value 10s.; second, value 5s.

Litho Machinemen.—Best four specimens of jobs worked by the competitor during the year. First prize, value 10s.; second, value 5s.

Litho Apprentices.—8¼-in. by 10½-in. heading to be made up from several plates. Plate transfers to be pulled, patched up, run down, and proved in black ink on 21-lb. cream wove large post, entirely by the competitor. Copy and plates supplied by the executive council. First prize, value 5s.

Section F.

Estimating Competition.—Estimates for six jobs of a class which occur regularly in printing establishments in this district. This competition is open to all members of the Guild and will not be held if there are fewer than four entries. First prize, value 10s.; second, value 5s.

Haddon's Joinery for Printers.

In the excellent illustrated catalogue of printers' joinery issued by Messrs. John Haddon and Co., of Salisbury-square, E.C., and Market Harborough, there is a fine selection of cases, racks, cabinets, and other woodwork for the use of printers, shown and described, and full particulars are given of space and labour-saving accessories for the composing-room, all of which have been specially designed to meet the needs of the busy printer. These appliances are well worth inspection, and we may just briefly note a few that are specially noticeable.

Design A61 is a double broadside cabinet of particularly novel and useful design. It is the smallest possible fitment on the market, giving accommodation for two compositors, each of whom is furnished with as much working space as if he were using a double frame. This cabinet accommodates 40 cases, and there are no upper cases to obstruct the view, so that better control is possible.

Design A59 affords rack accommodation for 80 cases and four pairs mounted, thus giving frame room for four compositors. Also there is room on the top for two small combination cabinets. These utilise space that would otherwise be wasted, thus keeping down rent and facilitating output.

Design A174 shows the Multum in Parvo imposing surface and hardwood stand. The room beneath the imposing surface is utilised, with the result that work is carried out under the best conditions, and the comp's time is not wasted. Such an appliance is bound to save time and labour, not only in the composing-room, but also in the machine-room, by facilitating stone work and keeping at a minimum the time when the machine is waiting for a form.

These are but one or two noteworthy lines, and there are many others which are worth attention when affecting changes in the composing-room.

Printing in Chicago.

An official of one of the large printing establishments, writing to an American contemporary, says that contracts are now secured in Chicago from New York publishers, whereas a few years ago the Eastern city printers frequently came to that city and landed big orders because local houses were not equipped to fill them. "Ten years ago," said this gentleman, "many local commercial and publishing houses sent most of their big work to Eastern printers. Chicago could not take care of them. Now it rarely occurs that local printers do not get all the Chicago work. Plants here, which a few years ago occupied perhaps a few hundred feet of rented space, now are building magnificent buildings which are required for their growing business."

Continuing, he said: "One large establishment, which a few years ago settled itself in a plant which was pointed to as a model of size and equipment, now is building a larger structure further out. The old building is outgrown. One of the largest printers in the country recently moved into a building which occupies half a block. Their plant is said to be one of the most complete in the world."

Chicago has a big printing trade with European and South American countries. The volume of railroad and mail order business runs into big figures. Probably 90 per cent. of the railroad map and time table printing is done here. Book printing for publishing houses is also on the increase, and is becoming a very important factor. Allied so closely as it is to the paper business, it will be a matter of interest to the trade to know that statistics for 1912 show that more printing is done in Chicago than any other great city. Furthermore, the past year is reported the best in the city's history. In addition, 1913 is looked to surpass the record of last year.

New York is still the centre of the general printing business because of the many publishing houses centred there. Chicago leads the world, however, in the volume of printing done, a large percentage being commercial work. The mail order printing is a big item in establishing Chicago's supremacy in this field.

According to a Colonial visitor, printers work much harder in New Zealand than they do in the Old Country. More skill is also required. He had worked fifty hours a week in England, as against forty-eight in New Zealand, and he considered that if the compositors were given a forty-four-week here it would assist them to work better and faster. They would be better qualified to give the highest results. Of course he was a trade union man.

Untair Competition in Germany.

The German Law takes cognisance of unfair competition between manufacturing firms who may be in a similar line of business, and has made provision for the prevention of injury by means of misleading advertisements or by the procuring of trade secrets in regard to manufacturing processes or selling methods. In a recent consular report the German law is pretty fully dealt with by our Commercial Attaché in that country, Sir Francis Oppenheimer, who says that:—"In principle the law does in fact recognise advertising as a permissible help in trade and industry and leaves its fair use unhampered. Whether an advertisement is fair depends upon the conception of the public to whom it is addressed. Protection against 'unfair advertising' is by this law accorded to the competitor in the same trade and not to the public. These provisions of the law dealing with 'unfair advertising' were framed especially to remedy the grievance against competitors fraudulently using Royal Warrants, titles, medals, and also to deal with those cases of 'selling off' for the purposes of which stocks were being replenished.

"An injunction can be granted against any person who in public notices or communications intended for a wider circle of persons makes incorrect statements, if such statements, capable of conveying the appearance of a particularly favourable offer, concern his business, more especially the quality, origin, method of manufacture or the price of goods (including professional and industrial services), the method of supply or source of his merchandise, the title to distinction, the cause or purpose of sale, the quantity of his stocks."

In regard to the disclosing of trade secrets it is provided that:—"Any employee, workman or apprentice in a commercial enterprise who communicates during his term of employment business secrets with which he is entrusted in consequence of his business employment, or of which he has otherwise obtained knowledge, provided the secrets are thus communicated for the purpose of commercial enterprise, becomes liable to a maximum term of imprisonment of one year and (or) a maximum fine of 5,000 marks. To the same punishment becomes liable he who utilises for his own benefit or communicates to others business or trade secrets of which he has obtained knowledge by one of the methods designated in the foregoing subsection or by some action on his part which is contrary to the law or good faith.

"The obligation to secrecy on the part of an employee is limited to the term of his employment. The secret must be a trade secret or a business secret; the fact which the law protects must be a real secret, but need not be an absolute secret (*e.g.*, when the proprietor of the business has himself already communicated the fact to several customers who are, by law, regarded as partners in the secret); the secret need not constitute an absolutely new fact, but must appertain to the business in question and be unknown to others; the proprietor of the business must have an interest in the secrecy of the fact. 'Trade and business' secrets embrace, *e.g.*, list of customers, origin.

"The employee is prohibited from communicating during his term of employment business secrets to others, but he cannot be prevented from utilising them for his own purposes; after the term of his employment he can communicate secrets which he obtained during his term of office and can utilise them, provided he has not obtained his knowledge through the unfair communications of another employee or by some action contrary to law or good faith.

FRENCH FOR OFFSET.—The *Bulletin Official* of the French master printers says that it will henceforth use the term "*roto-calco*" as the generic equivalent of the English term "offset." So far, the German printers have used the word "offset" as they found it, but no doubt the purists will sooner or later introduce a purely Teutonic term.

IN distributing, be careful never to throw type larger than 12-point into the cases. The larger types should be replaced in the boxes with a certain degree of care, as otherwise battered letter will soon spoil the proportion of their founts and decrease their usefulness.

A Common Mistake.

It is a mistake to believe that things sell themselves—and this is the reason why the most important thing in the world is salesmanship. The great majority of people are perfectly satisfied to "let well enough alone." The great majority of people are satisfied with conditions until they are advised and convinced of something better. The world does not go searching for some new method of lighting a city, paving a street or operating a business. The man who has an improvement for lighting a city goes to the people of that city to persuade them that it will bring about an improvement of conditions. After resistance on the part of many and hesitancy on the part of all, the improvement is tried. When the experiment is successful the rest of the world does not immediately adopt the idea for the purpose of improvement, but it is necessary to employ the finest, cleanest and most forceful salesmanship to introduce this same improved condition into other cities.

So the moral is: If you have something to sell, advertise it! Talk it to every man who needs it, whether he knows he needs it or not. Proclaim its merit from the housetop, and if you believe in something really worth while, if you have at your disposal something of value to the rest of mankind or to your community, remember the rest of mankind or the community will never come to your door demanding the particular thing you have to sell.

If you hide your light under a bushel, you are digging your own grave and writing your own epitaph. Demands are the result of advertising campaigns, which not only sell merchandise, books, literature and ideas, but which benefit the entire world in an educative way that nothing else has ever done.—*Merchants' Journal.*

A NEAT little booklet is issued by Messrs A. E. Dent and Co., Ltd., Broadway, E.C., in which they give examples of their three colour and half-tone blocks, which show the excellent quality of work that is turned out by this firm. The booklet is beautifully printed.

The Ghent International Exhibition.

Precautions Against Fire Dangers.

The mention of an international exhibition cannot fail to suggest the danger of fire ever since the terrible disaster which befell the Brussels Exhibition of 1910, when, in a matter of minutes, besides other buildings, the British and Belgian Industrial Sections with their priceless contents were entirely destroyed.

But the world learns its lessons from disasters and it is safe to say that there will never be another serious fire at an international exhibition. How fully the lessons of Brussels have been learned is well shown by the arrangements which have been made by the authorities of the Ghent International Exhibition.

At Brussels the disaster was largely due to the failure of the water supply, so at Ghent a powerful supply has been installed quite distinct from all other water supplies, and the grounds are mined in all directions by water mains, the largest of which are 300 millimetres, while the greater number are 200 and 150 millimetres in diameter. These mains serve the hydrants scattered throughout the grounds and pavilions. In no part of the whole exhibition, the authorities state, are two hydrants more than 50 metres apart, the average distance being considerably less.

The water supply itself is derived from the river Scheldt by means of large automatic pumps at a pressure of five atmospheres, and the hydrants will consequently be capable of throwing water to the top of any of the buildings. That the supply will be adequate in quantity is vouched for by the fact that these pumps can supply 600 cubic metres of water per hour.

But the greatest safety from fire lies in the fact that the buildings are isolated and in no place less than ten metres apart, while in practically all cases they are much more. A special fire brigade station is also being installed by the municipal fire brigade in the centre of the Exhibition, and equipped with motor fire engines and a staff of 25 men. This brigade will be able to reach all parts of the Exhibition owing to the space between the buildings, and will also be independent of the water supply from the mains owing to the artificial lakes in the grounds. A supply of electric fire alarms connecting with the fire station will also be in operation, just as in the London streets, while hand extinguishers will be placed in all buildings.

The British section will have yet another safeguard—and one of the greatest—in the fact that the floors are laid direct upon the ground and all platforms packed with earth. This completely prevents the spreading of fire in the space below the flooring and confines a fire to where it can be reached at once.

Light and Reading.

In a New York publication entitled *Good Lighting*, Dr. Leonard K. Hirshberg has been writing on the relation of lighting to the paper and types of our present-day books. As the light fades in the evening, says the doctor, as quoted in the *Manchester Guardian*, the white paper of a printed page becomes darker and darker, until finally it reflects to the eye little more light than the black ink of the printed letters, which consequently no longer stand out clear and distinct. In order to admit all the light possible, the pupil enlarges, and in doing so lessens the distinctness of the retinal image; more important than this, we hold the page closer to the eye, thereby enlarging the retinal image and increasing the intensity of stimulation, but throwing far more work upon the pupillary muscle to focus for the near object. All of these unfavourable conditions taken together place undue strain upon the mechanism of accommodation. Hardly less objectionable is excessive illumination of an object. After a certain intensity of light is reached the retina no longer responds to increase of stimulation with increase of visual reaction. To apply this principle, we have only to remember that a printed letter is not absolutely "dead black," but reflects some light. When the illumination is moderate this reflected light hardly affects the retina at all, and the contrast between the black letter and white paper is marked. As the intensity of illumination increases contrast is lessened, and sharper accommodation as well as closer attention is needed to see distinctly. The use of fine type should be reduced to a minimum, because it necessitates greater effort of accommodation and intensifies all the evils of improper illumination. Any printed matter which must be held less than eighteen inches from the eye in order to be seen clearly is undesirable for long-continued reading.

Closely connected with the size of the type is the character of the paper on which it is printed. This should be as dull as possible in order to avoid the confusing effect of a glossy surface. The use of highly calendered paper in many books and serial publications, because such paper lends itself more readily to the reproduction of pictures in half-tone, is a sacrifice of hygienic considerations to cheapness. The source of illumination for near work should be as free as possible from unsteadiness or flicker, since a flickering light necessitates the most accurate accommodation. A "student's lamp," "tungsten burner," or incandescent electric lamp is preferable in this respect to candles, gas-jets, and arc-lights for near work. For the same reason caution is demanded in the matter of reading on railroad trains. American railway trains have recently become so heavy, and the road-bed and rails have been so much improved in various ways, that the danger of reading or writing while travelling by rail is much less than formerly. At the same time the danger still exists, and reading on many railway and trolley cars is still to be done with caution, or, better still, avoided altogether.

L.C.C. School of Photo-Engraving AND LITHOGRAPHY.

The report of the Principal on the work of the above school during the two sessions 1910–11 and 1911–12 has been issued in one volume, which also contains many admirable examples of the work that is taught in this institution. This period covers the transfer from the temporary premises in Fleet-lane to the newly-built school in Bolt-court.

Dealing with the last session, the Principal reports that the total number of individual students who entered the school was 595, as compared with 605 in the previous session, a smaller decrease than might have been expected considering the nature of the premises. Students attended from 228 separate firms. Twelve students took the full course in the daytime, three of whom, completing their two years' course, obtained situations in the photo-engraving industry. During the session 24 men were admitted free during temporary unemployment. In the Photo-engraving classes the students have been more numerous than ever, and the character of the work has been quite up to the level of the previous session. There has been a distinct increase over previous sessions in the numbers and attendance of students in the Preparation of Originals class, and a good average was maintained to the end, whilst the quality and quantity of finished work submitted by students for competition were far above that of previous sessions. In the Photogravure class a new copperplate press installed enabled students to pull very much better proofs, and plates were also produced in this class for rotary photogravure machine printing, both by carbon resist and fish-glue methods. Progress was good in the practical part of the work in all sections of the Collotype class, and good work and excellent progress was made in the Lithographic class. Three mills were visited by the Papermaking class, and the students attending the Stationery lectures are reported to have been more interested and eager than in previous courses. The question of establishing afternoon classes for boys employed in the photo-engraving craft is under consideration.

The typographic illustrations in the book have all been printed on the school premises, and comprise a mezzotint, several photogravures, line blocks of borders, initials, head and tail pieces from designs by the Design Class, reproduction of a wash drawing in half-tone printed on cheap paper in a double tone ink, half-tones, three-colour reproductions, a collotype reproduction, lithographs in colours and monotone, and photo-lithography and embossing. The work is of high merit, and testifies to the value of the instruction given at this institution.

LECTURES ON THE
History of Printing and Bookmaking.

The fourth lecture in the course of six, on "The History and Progress of the Arts of Printing and Bookmaking," by Mr. R. A. Peddie, at the St. Bride Foundation Institute, was delivered on Monday evening, and related to the eighteenth century. Again it was illustrated with lantern slides, and a display of eighteenth century books arranged on a table in the order in which they were referred to by the lecturer.

Mr. Peddie said this period was somewhat different to those he had already dealt with. There was no outstanding variety of type to be found through the eighteenth century, and there was no great invention introduced. It was curious in many respects. It represented a dull level, and yet at the same time one or two new type faces (not new varieties) were introduced which had a very great effect indeed on the printing of succeeding centuries. As it would be difficult to deal with the several countries of Europe in a lecture of the length he was limited to, Mr. Peddie said he would not go far beyond the borders of England.

At the beginning of the eighteenth century type in England was almost entirely of Dutch origin. Nearly every printer, German and French as well as English, got his type from Holland, the Dutch having secured almost a monopoly of the typefounding industry. There were only one or two typefounders in England, and they were comparatively small at the beginning of the eighteenth century. The great Bible printed by Baskett, known as the "Vinegar Bible," because in the parable of the vineyard the latter word was misprinted vinegar, was printed in a very fine roman type, but it was not known from what foundry it came. It was believed that it was English type because Baskett, in order to print that Bible and some other works, mortgaged the whole of his stock and to raise a loan had to give a catalogue, or bill of sale, of all his stock, and from this they knew where he got his type. The type of this Bible, however, was not indicated, but they had strong reasons for supposing that this fine roman type of 1717 was really the first work of the celebrated William Caslon.

This brought the lecturer to the first great English typefounder. William Caslon was born in 1692, and began type-founding in 1720, or thereabouts. The first books known to be printed in Caslon type were the works of Selden, the jurist, in six volumes, dated 1722 to 1726. These volumes were printed by Bowyer, who had the type cut by Caslon, and this was the first use of the celebrated old-faced Caslon type, an excellent type, which prevailed through the greater part of the eighteenth century, and upon the style of which the other founders, not only of England, but abroad, modelled many of their own faces. Caslon's type, added the lecturer, has hardly been equalled since, and certainly has not been surpassed.

The eighteenth century was a century of individualities, who were typefounders rather more than printers. Baskerville, of Birmingham, was not only a typefounder, but a printer. His first book appeared in 1757, and was an edition of Virgil on which he had been working for many years. The principal value of Baskerville's work was a return to the real simplicity of the early years. His title pages were absolutely simple. He used very few ornaments, if any, and certainly never used one in an edition of the classics. He exercised enormous care in printing. We found in all his books cancelled leaves right the way through. It appeared that in looking through a book he had printed, if he hit upon a mistake or a bit of printing he did not like he had that page reprinted, the old one being torn out and the new one put in its place. It showed Baskerville's great care in printing, but his disregard for the make-up of the book from the typographical standpoint. His Bibles and Prayer Books were the finest pieces of work. He printed two Bibles, one for Birmingham and one for Cambridge, and the lecturer thought the latter was perhaps the finest. Baskerville's work, however, was not a success. The booksellers did not support him, and he got disgusted, and tried to sell his business as a going concern. As a typefounder he did not succeed either. He died in 1775, and his widow subsequently sold the whole of the type to a printing office in France. Where the punches and matrices went to is not known. No doubt Caslon was too strong for Baskerville, and in the struggle Caslon won.

A Scottish press which made improvements during this period was the Foulis Press at Glasgow. The brothers Foulis printed a large number of books, mostly classics, and they printed for the Glasgow University. A Greek type was cut for them by Dr. Andrew Wilson.

Firmin Didot did for France what Baskerville did for England and Bodoni for Italy. As typefounders the firm of Didot lasted for many years, and their type had a great influence on French printing. The books produced by them were really the last struggle of French typography before it descended into the region of mediocrity, where the lecturer was afraid it still was, with the exception of one or two outstanding printers.

In Italy a similar man to the above was Bodoni, born in 1740. He practised his art at the printing office of the Propaganda at Rome, but ultimately settled at Parma, and died in 1813. He was a great printer, and no doubt his books saved Italian printing from being absolutely ignored during the eighteenth century. His printing was of a wonderful character. The clearness of the type and the size of the margins alone would differentiate it from any work of its kind in Italy at that time.

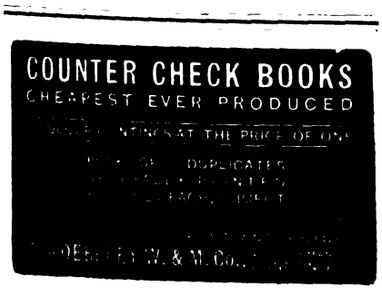
Ibarra was a printer in Madrid about this time, who did most excellent work. The notes to a book he translated from the Italian into Spanish were in a roman type that had a strong resemblance to Caslon's.

Turning to illustration, Mr. Peddie said that during the eighteenth century it was almost entirely copperplate. He would not say that wood engraving was non-existent, but what there was, and there was not very much, was very bad indeed. Copperplate engraving had reached its highest point. Bewick, born in 1753, re-invented or re-constructed the art of wood engraving. He devoted himself to it in 1777, and there was no doubt he restored wood engraving to a position almost as high as it held some 200 years previously. He used a harder wood and engraver's tools rather than the knives used previously. They were wood cutters before that, and Bewick was really the first wood engraver.

With regard to typographic colour printing, the lecturer said the printer still used his ordinary red and black, though not red so much as had been used in previous centuries, but he knew nothing of other colours. There was a printer in Mentz in 1722, however, who printed diagrams in a scientist's works in colours, a copy of which was exhibited, one diagram being in five colours. Up to 1750 there was no colour printing except this, and chiaroscuso, invented in the sixteenth century. The three-colour theory was discovered by Le Blon about 1710. He used three mezzotint plates, one in each of the primary colours, of course selecting the colours himself. It was the first attempt at a scientific method of colour printing, and his method was adopted by a few printers for anatomical books, books on natural history, etc. Towards the end of the century there was a great development in England of printing in colours from ordinary engraved plates in line, mezzotint, stipple and aquatint.

Speaking of the printing press, the lecturer pointed out that there was exactly the same press at the end of the eighteenth century that they saw in the early part of the sixteenth century, with only slight improvements. In 1790 William Nicholson took out a patent which was the germ of the modern cylinder press, but the hand press remained the same, with only slight improvements made to facilitate working.

On the subject of book sizes, Mr. Peddie said in the early part of the eighteenth century the majority of books were 8vo., but later on there was a great tendency to produce large 4tos., and folio books.



The press was practically free in this country during the eighteenth century. The laws of the Star Chamber, the Acts of Parliament and the regulations of the Stationers' Company were all practically dead letters. The consequence was that there was an enormous output of provincial printing in this country. Until 1793 there was no legislation against the setting up of a press, but in that year the Act against sedition contained a clause stating that every printer must register his press with the Clerk of the Peace. It was not put into force to any great extent, and in some counties it was ignored.

Mr. Peddie's concluding remarks related to newspapers, which developed during the eighteenth century from the mere sheet containing a few paragraphs of news to the real newspaper. The first daily newspaper in London and in England was the *Daily Courant*, which appeared on March 11th, 1702, and the early provincial papers were almost contemporary with that newspaper. The size of the newspapers was limited by the size of the press used. Magazines were introduced in the eighteenth century, and during that period a curious fight was going on between the magazine on the one side, the pamphlet on the other, and the newspaper between the two.

Next Monday Mr. Peddie will deal with the development of printing in the nineteenth century.

The official "note-takers," otherwise shorthand writers, at the "Titanic" enquiry, are to receive fees and remuneration amounting to £680.

Trade Notes.

MR. BONAR LAW has accepted the invitation of the Press Gallery of the Houses of Parliament to be the guest of the evening at their annual dinner in April.

THIS year the Newspaper Press Fund celebrates its 50th anniversary and Prince Arthur of Connaught has consented to preside over the jubilee dinner at the Hotel Metropole on Saturday, May 24th.

A PARLIAMENTARY PAPER was issued on Saturday last, showing a supplementary estimate for the Civil Services for the year ending March 31st next, and amongst the contributions required is the sum of £162,000 for stationery and printing.

AT the Liverpool Assizes last week, a solicitor was awarded £100 damages against the *Liverpool Evening Express*. In reporting a case at the last assizes the newspaper described Mr. Barton in a headline as an "ex-solicitor," and in the body of the report as "formerly a solicitor."

THE Special Printing Trades Supplement, which the *Times* issued with its 40,000th number on September 10th last, has been reprinted in the form of a cloth-bound 4to vol. of 220 pp., published at 6s. Apart from a few necessary corrections, the matter stands as it did in the Supplement itself.

FOR some time past the printers employed by the *Buteman*, the *Chronicle*, and the *Express* newspapers at Rothesay, on the Island of Bute, have been agitating for an increase of 4s. per week. We understand that the matter has now been settled on the basis of the men receiving an advance of 3s. per week.

MESSRS. LINOTYPE AND MACHINERY, LTD., 188-9, Fleet-street, E.C., are sending out to customers cases for holding the "London Telephone Directory." They are well made and will be a great convenience to recipients, while at the same time they will serve to keep the firm's specialities well advertised while they are in use.

TENDERS WANTED.—By the Controller of H.M. Stationery Office for the supply of graphs, graph composition, etc. Particulars from H.M. Stationery Office, Westminster, S.W. By the Blyth (Northumberland) Education Committee for a supply of books, stationery, etc., for three years. Forms of tender from H. T. Rutherford, Blyth.

IN a report that appears in the *Board of Trade Journal* on the state of trade in the Island of Jamaica, it is stated that in paper, and stationery other than paper, the United States of America are making serious encroachment on the United Kingdom trade, and it would be well if United Kingdom manufacturers were to take note of this competition.

ON Saturday evening the annual dinner of the Northern Society of Journalists was held at the Palatine Hotel, Sunderland, Mr. F. W. Betty, president, in the chair. Councillor Baxter, in proposing the toast of "The Northern Society," spoke of the value of the Press from a public man's point of view, and also of the good that could be attained through organisation.

ACCORDING to a report on the trade of South Africa during the ten months ending October, 1912, that appears in the *Board of Trade Journal*, there was an increase in the imports of printing paper amounting to £18,000, and a decrease in the imports of printing machinery to the amount of £11,000, as compared with the figures for the corresponding period of 1911.

MESSRS. SELLS, LTD., advertising agents, 167-168, Fleet-street, E.C., have issued sheet No. 4 of "How to Increase your Sales," a publication that gives a list of the leading markets abroad for the sale of British goods. The various countries and the exports thereto for the year 1911 are given in tabular form. Messrs. Sells, Ltd., will be pleased to send a copy of the sheet to any of our readers who may apply for it.

THE First Cost Congress of the Federation of Master Printers of the United Kingdom is to be held in the Hall of the Stationers' Company ,by permission of the Master, himself King's Printer, and the Wardens, on Tuesday and Wednesday, February 18th and 19th, beginning at 2.30 p.m. on Tuesday. A cordial invitation is extended to every master printer in the United Kingdom to attend and take part in the proceedings.

ON Tuesday evening the 23rd annual dinner of the Associated Wholesale Newsagents was held at the Holborn Restaurant, under the presidency of Mr. Frank Lloyd. The Association's guests included the Hon. Harry Lawson, M.P., Sir George Riddle, Sir Frank Newnes, Sir Henry Dalziel, M.P., Mr. George R. Sims, Mr. H. F. Le Bas, and Mr. Arthur Spurgeon.

THE late Mr. A. E. Hewitson, formerly editor and proprietor of the *Preston Chronicle*, has left estate of the value of £6,983.

WE regret to record the death of Mr. William Etchells, printer, of Carlisle, which took place very suddenly the other evening.

ANOTHER labour newspaper is announced to make its appearance under the title of *The Call*. The publishing offices will be at High-road, Kilburn.

ACCORDING to *Kemp's Mercantile Gazette* the number of failures in the printing and stationery trades of England and Wales for the week ending Friday, January 31st, was six; the corresponding week in 1912 showing two.

THE annual meeting of the Manchester branch of the National Union of Journalists was held on Saturday evening, when the following officers were elected:—Chairman and representative on the National Executive, Mr. F. F. Hamer; vice-chairman, Mr. B. Farrington; treasurer, Mr. E. H. Prince; corresponding secretary, Mr. A. Harrop; financial secretary, Mr. J. C. Menzies; assistant financial secretary, Mr. J. A. Woodbridge; insurance secretary, Mr. N. E. Nash; auditors, Mr. G. Gilliat and P. Rudd. The annual report and balance sheet was adopted and showed the branch to be in a very flourishing condition.

REFERRING to Mr. Reuben Spark, the oldest Newcastle printer, whose death we announced last week, a correspondent of the *Newcastle Chronicle* writes:—"Among the veterans of the craft who survive may be mentioned Mr. Fenwick Loraine, fairly active, at about 84 or 85; Mr. Thomas Proctor, Mr. Alexander Forrest, Mr. Wm. Sims, and others who are enjoying the superannuation pay of the Typographical Association. Others still in active work include Messrs. Alex. Mortimer, Henry Wm. Hastings, Wm. Lindsley, James Brown, George Mayne, and George Green. The veterans of 60 and over are so numerous in local printing offices that a lengthy list of their names might be readily compiled."

IN the Old Assembly Rooms, Newcastle, on Saturday night last, at the annual social and dance of the *North Mail*, *Evening Mail*, and *Leader*, about 200 ladies and gentlemen were present when a very enjoyable evening was spent. On the excellent floor of this popular ballroom dancing was kept up until midnight. At intervals in the evening Mr. Pearson contributed songs with his wonted skill, for which he received well-merited applause. Messrs. G. Lyall (secretary), C. N. Athey (treasurer), R. Gadon, E. T. Hawkes, E. Nicholson, G. R. Kent, M. G. Peers, and J. Richardson were the committee in charge of the arrangements, the duties of M.C. being in the capable hands of Messrs. J. Hutchinson, J. M. Robson, P. Knox, G. R. Kent, and J. Wise.

AN interesting event took place the other evening, at the "White Swan," Salisbury-court, when Mr. J. J. Jagelman was presented with a gold watch by the members of the composing department to commemorate his twenty-fifth year as printer of *Lloyd's News*. Mr. Batt, father of the chapel, in making the presentation, said they were all very glad to have the opportunity of showing their practical appreciation of Mr. Jagelman, and hoped he would be able to continue his duties for many more years. Mr. Jagelman, in returning thanks, spoke as to the vast changes that had taken place during his forty-one years on the paper; and acknowledged the cordial co-operation of the composing-room staff. In conclusion, he said it was interesting to note that the average service per man of the 'ship of 31 worked out at 22¼ years, and the average age 41¾, the oldest being 56 and the youngest 25 years. A capital musical programme concluded the evening.

ON Monday the settlement of an action for libel against *Vanity Fair* was announced to Mr. Justice Bucknill in the King's Bench Division. The plaintiff was Mr. Arthur W. Waterlow King, of Messrs. P. S. King and Son, Parliamentary printers and publishers, of Westminster, who, counsel said, was a mumber of the Acton Urban District Council, and certain grave suggestions of misconduct were made in regard to the council. The St. Clement's Press (the printers) at once apologised, paid £200 into court, and agreed to pay costs. Mr. Lee (proprietor and editor) went on with his defence, but now stated that the materials for the article were supplied by a correspondent on whose good faith he relied. He was now satisfied that there was no foundation for the suggestions made, and he expressed his regret. His lordship expressed his satisfaction at the settlement, which he thought was a very proper one, and the case was then struck off the list.

THE Amsterdam compositors, who have been on strike for some time, have decided to resume work, accepting the conditions of the employers, who have partially agreed to the increase of the wages demanded.

ON Tuesday, in the Chancery Division, Lord Justice Farwell, sitting as an additional Chancery Judge, heard a motion for judgment in default of defence in the action of the official receiver and liquidator of the Birkbeck Permanent Benefit Building Society against Mr. Ben Tillett. Mr. Galbraith said that the Twentieth Century Press, Ltd., requested the society to advance certain moneys, which it did on certain guarantees, one of the guarantors being Mr. Tillett, whose liability was not to exceed £100, with interest at 5 per cent. The bulk of the advance had since been paid by the other two guarantors, and he (counsel) now asked that Mr. Tillett should be ordered to pay his proportion, which was £77 13s. 4d., and interest down to December 7th last. His Lordship made the order.

The Scottish Printers' Dispute.

A *résumé* of the progress of the dispute between the master printers of Glasgow and Edinburgh and their men, up to the time of our going to press, appeared in our last issue, and since then both sides have been preparing for a struggle, while at the same time hoping for a peaceful settlement before the 15th inst., when the lock-out notices expire. On Wednesday of last week lock-out notices were posted in the printing offices of more than 120 firms affiliated with the Scottish Alliance of Master Printers and Kindred Trades and the Association of Master Printers in Glasgow and Edinburgh, intimating that the services of all members of the Scottish Typographical Association, excepting foremen, sub-foremen, and apprentices, employed by them will be dispensed with on February 15th. These firms employ fully five-sixths of the Association men engaged in the jobbing and book industries in the two cities.

On Thursday the board of the Glasgow Master Printers' Association issued a statement to the members in connection with the dispute. After giving a review of the history of the trouble, the circular states that what is wanted is a definite recognition by the Scottish Typographical Society and its branches of the principle that no new rules or alterations in the existing rules which may affect mutual interests may be passed by employers or employees without mutual agreement. If this principle is recognised, the employers state, and if satisfactory arrangements are made for embodying it in practice, the present unfortunate position might at once be at an end.

On the same day at a meeting of the Typographical Association Executive, instructions were issued to the workmen to the effect that men who are employed from day to day in printing offices were to cease work at once, and those who require to give only a week's notice must tender their notice.

In a circular issued by the master printers the history of the dispute is given, and it continues:—

> "You may also have noticed in the press that the secretary of the Scottish Typographical Association refers to a proposal made by five of his delegates after the conference had been closed on January 27th. At the conference itself, Mr. Reid, the vice-chairman, representing the employees, said distinctly that largely attended meetings of the members of the men's organisations had in each case answered a decided negative to the proposal that, while negotiations for modification were in progress, the proposed new rules should be suspended. The suggestion of Mr. Reid and his friends, after the conference, was that they would recommend the members of their organisations to give an affirmative answer to the question to which, a week before, they had given a decided negative. Our experience has been that proposals involving recommendations have not led to a definite or satisfactory result. What is needed is a definite recognition by the Scottish Typographical Association and its branches of the principle that no new rules or alterations in the existing rules, which may affect mutual interests, may be passed by employers or employees without mutual agreement. If this principle is recognised, and if satisfactory arrangements are made for embodying it in practice, the present unfortunate position might at once be at an end.
>
> "I am also instructed to inform you that very full arrangements have been made for the execution of work in other parts of the country, and our organisations are prepared to assist any employer who may be in difficulty as to the execution of any work."

Digitized by Google

On Saturday the dispute entered on a new phase, with a demand by the men for a substantial increase in wages and a reduction in the working hours. At a mass meeting of the men in the evening a resolution was unanimously carried that in the event of the employers locking them out they would not return to work unless they received £2 for a 48 hours' week. It was also decided that unless a favourable answer was received by Thursday (to-day) they would give in their notices. The demand represents an increase of 4s. and a reduction of working hours by two per week. Delegates from Edinburgh were present at the meeting and stated that both sections of the trade there intended to ask for an advance of 4s., making the minimum wage 37s.

At the same meeting Mr. John Robertson, secretary of the Glasgow Branch of the Typographical Society, reported on the conference with the employers. He said he was proud of the solidarity of the Glasgow Typographical Society. With one or two exceptions, foremen and sub-foremen and managers had given in their notice along with the men affected by the lock-out. They were out to win, and they were going to win more than they would be locked out for. He said the official report of the conference stated that it was held for the purpose of discussing the working rules and with the object of securing a definite settlement of these which might be mutually agreeable to the Master Printers' Association of Glasgow and the Edinburgh and Glasgow Branches of the Scottish Typographical Association. The point he wished to bring out was that they did not meet to discuss the Edinburgh or the Glasgow rules, but the rules of the whole association. The subjects in dispute were rules that were passed by a delegate meeting composed of representatives from all the branches in Scotland, who had full power to appoint a committee to draw up rules which became operative in all the branches of the Scottish Typographical Society. That delegate meeting had been held time after time, and its rules had never before been called in question by the Masters' Association. Mr. Robertson then detailed what took place at the conference and led to the intimation by the employers that notices would be posted.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Buy your *Illustrated London News* this week and next; you may find some rather startling information regarding machine photogravure. Things are moving and moving very fast.

o o o

The Huebner-Bleisten process, it is said, is about to emerge under a new direction; with new organisation; and new financial support.

o o o

Meantime the Miller-Molley method is in being; is actually doing important work. *Beati qui possidentes.* Latin's a portmanteau much-in-little sort of language, and those three words mean; Other-things-being-equal-you're-safe-in-pawning-your-shirt-and-going-nap-on-the-man-who's-first-in-delivering-the-goods.

o o o

So don't listen to those who say the three words only mean that those in actual possession are the happy men.

o o o

Talking of business happiness, what's wrong with Waterlow and Sons' reported 17½ per cent. dividend? Or with the increases of selling prices also accredited to them, by which wise policy this handsome dividend has been made practicable.

o o o

I admit it's not quite up to the 200 per cent. profit of some shares in Maypole Dairy.

o o o

It will be a great event for printerdom if the London County Council acts upon the very important suggestions put forward by the Committee of the British Association regarding the types and the manner of illustrations which alone are suitable for children's eyesight at particular stages of the children's development.

It would mean an enormous new ordering of educational books for London; and sooner or later for the whole country. Which would not be content to lag behind London.

o o o

The Committee of the British Association has called to its aid various typefounders and accredited spokesmen for the printing craft. Its report can be bought for 4d. from the British Association's office at Burlington House, Piccadilly. Sizes of the types declared to be appropriate to children of particular ages are given in a Typographical Table; both in "point" and in millimetres.

o o o

Roughly there are about three points in a millimetre.

o o o

I ran over to Brixton the other day to pay my respects to Mr. Farlow Wilson. He is 83 years young, and still alert of mind, quick of hearing, with, I think, good sight and a fondness for and plenty of physical force for his daily constitutional. To be sure his legs begin to protest a bit. His understandings are weaker than his understanding.

o o o

I shall be glad to hear that that lighter construction and cheaper newspaper rotary is actually on the stocks.

o o o

Mr. Peddie at 7.30 next Monday will deal in his lecture at St. Bride Institute with the printers of the nineteenth century. There was a good and deeply attentive audience last Monday when the eighteenth century was covered. He was in fine form, racy and informative, refreshing always, and brief withal.

o o o

Result: Plenty of time for questions and plenty of questions in the time.

o o o

Do go next Monday evening, even if you haven't gone to any earlier lecture in the course.

o o o

Mr. Peddie takes great pains with the display of his old books to illustrate points in his lecture. You or I might talk interestingly on these topics but could we invite our audience to turn their heads as we spoke of this Franklin of 1744, and that Le Blon on three-colour, of about the same time; and the other Baskerville Bible or Foulis book of poems, or this Bodoni greek, or that roman folio, or that Didot volume—to turn and see the actual things of which we were talking. St. Bride Library is extraordinarily rich and Mr. Peddie has all the art and all the love of the librarian.

o o o

I cannot quite agree with Mr. Joseph Pennell. But then he cannot quite agree with himself. He starts off an *Imprint* article with a "frightener." "The illustrated magazine and weekly will die."

o o o

I sent my lad out to buy crêpe as soon as I read that; just as F. E. Smith says he did when his daily told him there had been a massacre at Pekin.

o o o

I've now got a bit of crêpe to sell cheap; for the lad had hardly got out of earshot before I read on:—"I do not for the moment mean that illustrated magazines like the 'Century,' 'Harper's' or 'Scribner' will be killed or even be injured by newspaper competition."

o o o

My solicitor is applying to him for compensation. I'm not going to have my nerves jarred needlessly in this way, without "knowing why." It's all very well for him to explain as he does that the things which are to die are "the immense numbers of the cheap monthlies and cheap weeklies with which every bookstall is loaded, and which simply live on sensation and imitation, and which are always, save by accident, a month or so behind time." He conveyed at first that *all* the illustrated magazines were doomed. It was that that gave me the thrill; and the crêpe merchant his order.

o o o

However, on second thoughts, I shall forgive him, for the sake of the really delightful article telling incidentally the story of the great series of pictures illustrating the work of the London County Council which the *Daily Chronicle* published in 1895. It was the paper I was then taking in, and I have never forgotten them. They were magnificent; unequalled before or since.

o o o

Mr. Pennell tells us that they nearly wrecked the presses, ruined the proprietor—(come, come!)—"made the engraver, Hentschel, work for nights, and the printer, Bugg, day and night; and nearly caused a strike in the stereotyping department of the *Daily Chronicle*.

o o o

"Twenty-four illustrations were printed, I believe, and twenty-five seats lost to the Reform Party—for whom we were supposed to be working—and some people blamed it on the art."

o o o

Be it noticed that Mr. Pennell is not down upon process-engraving as is the journal which publishes his talk. Its editors seem ashamed to have anything to do with it. It's the unclean thing. But they are so right-minded, and on the whole so open-minded, I cannot but feel that they will alter that conclusion, and will recognise that not process-engraving, *per se*, but bad process-engraving, is the thing at which to gird.

o o o

For us to deprive ourselves of the enormous benefit of process-engraving simply because some engravers turn out shoddy plates, would be no wiser than the action of the man whom during my rambles I found mutilated and unconscious. In his vexation at repeated small twinges, he had cut off his leg to cure a corn. (Ed.:—"You swear you saw it?") Well—it looks better to state it as a personal experience, don't you know? It carries more conviction.

FRANK COLEBROOK.

MESSRS. GARRATT AND ATKINSON, Warwick House, Ealing, send out a selection of designs for parcel labels, all of which are neatly printed in colours in an attractive style. The blocks used are the "G and A" line colour blocks, and the labels have been printed on a platen machine with effects that rival lithography. The net trade prices at which Messrs. Garrett and Atkinson supply these blocks should make it worth the while of printers to investigate their merits.

STEREO PLANT for SALE
(NEARLY NEW).

Powerful Planing Machine,

for both type-high or pica plates, with spare knife, bed 24-ins. by 14½-ins., three pulleys for forward and reverse motion. In excellent order.

Combined Melting Furnace and Hot-Air Chamber,

fitted with hot-air oven, etc., for plaster process, with strong staple screw press. Chamber, 8-ft. by 2-ft. 2-ins. Melting Pot, 19-ins. in diameter. Platen, 2-ft. 2-ins. by 2-ft. 4-ins., flues, etc. Total length, 10-ft., and stoking tools complete.

Strong Staple Screw Press,

gas-heated with patent burners, 2-ft. 6-ins. by 2-ft. 6-ins., complete.

Can be seen any time by appointment.

Apply to C. P., Office of the "British and Colonial Printer and Stationer," 58, Shoe Lane, London, E.C.

Re D. HARPER AND CO.

PURSUANT to an Order dated the 30th July, 1912, made in an Action of *re* Harper (deceased), Jay *v.* Garstin, 1912, H. No. 1,908.

TENDERS are invited for the purchase of the Old-Established Business of Advertisers' Novelty Manufacturers, Manufacturing Stationers, Show-Card Printers, Diary Publishers, Ticket Writers, and Gold Blockers, carried on under the Trade Name of D. Harper and Company at 258, 260, and 262, Holloway Road, London, N.

Tenders are to be sent under cover addressed to Charles Hulbert, Esq., Master at Mr. Justice Warrington's and Mr. Justice Parker's Chambers at the Royal Courts of Justice, Strand, London, not later than two o'clock on Monday, the 17th February, 1913.

The Tenders will not be made public but will be opened by the Master at the said Chambers, on Tuesday, the 18th February, 1913, at 3 o'clock in the afternoon, when the persons having tendered may if they think fit attend personally or by their Solicitors.

Particulars of Sale and Conditions and Form of Tender may be obtained (gratis) of Mr. Percy Mason (the Receiver), 64, Gresham Street, E.C.; of Messrs. Marston and Robinson, 30, Essex Street, Strand, W.C., Solicitors; of Mr. J. C. Brookhouse, 8, Queen Street, E.C., Solicitor; and of Messrs. Henry Holmes and Co., 6, Mortimer Street, W., Auctioneers and Valuers. 13945

The Crawford Library.

THE death of the Earl of Crawford, last week, brings to notice that he was an enthusiastic book collector and possessed one of the finest, if not the very finest, private collection of volumes in the kingdom. The deceased Earl did not simply collect for collectings sake, but was remarkably intimate with their contents, and extremely liberal in the use that he allowed others to make of his library. Among the books in his late Lordship's library at Haigh there are some 8,000 Papal bulls, briefs and similar documents, dating from the fifteenth to the eighteenth century, dealing chiefly with the civil and ecclesiastical history of the city of Rome and the States of the Church, and formerly in the possession of the House of Borghese. Another collection is that of early editions of Luther's works, and there are sections devoted to philately, to proclamations, and to books on astronomy. Recently he has been specially interested in collecting printed matter on the French Revolution and the Napoleonic era. Like his father Lord Crawford was an author, his contributions to literature being mostly of scientific and astronomical interest.

* * *

Raising Printing Prices.

IN the February issue of the *Organiser* the recent communication of the Master Printers' Federation notifying an increase of prices to customers is commented on as follows:—"No doubt the increase is largely due to the shorter hours now generally worked in the printing trade and to the better labour conditions given to the men. Probably most buyers of printing will not complain of an increase in wages and the general betterment of conditions, though they will wish that the unions associated with the printing trade would impose fewer irritating restrictions as to the manner in which work is turned out—that they would make it easier to 'get things done.' Printing, to a large proportion of our readers, means printed advertising matter; very few of them would object to a small increase in price provided they could get better service. The majority of printers are incompetent where advertising work is concerned; they do not know how to set up and display printed matter in a way that will help the advertiser to sell his goods. The man who has made a study of this question is getting good prices. Advertisers have a right to expect that printers shall keep good, clean, modern display and body types, and know how to use them so as to get something approaching the maximum value from the printed page. Much of the best work is laid out by men who are not printers."

* * *

A Short-Sighted Policy.

THE writer in the *Organiser* then goes on to say that:—"Another influence which must be having an effect on the prices of advertising printing is the abandon with which some printers will spend their money in order to get a job. It is no unusual thing for a large advertiser who has been frequently canvassed by printers' travellers to be requested by a number of firms to be allowed to submit designs. The cost of the designs in some cases must be almost equal to the price of the work. This must be paid by the consumers eventually. Quite recently some friends of ours were in the market for a poster. Four firms asked permission to submit designs, and this was given on the understanding that it was their own funeral. They sent in twelve colour drawings by excellent artists to compete for one job. The printer who submits a large number of sketches would do far better to send in one good drawing—the best possible. We like the printer who says, 'We have thought this proposition out carefully, and this represents our idea,' rather than the man who brings a large number of sketches in the hope that by some lucky chance one of them will be suitable."

* * *

Some Good Advice.

"HERE is advice"—says our contemporary—"to the Federation-of-Master-Printers-and-Allied-Trades-of-the-United-Kingdom-of-Great-Britain-and-Ireland and also to the buyer—do what you can to cut out this terrible waste of useless designs and go hard for efficiency. The Federation aforesaid might use its influence by representing such views as have been expressed here, to its members. The buyer will find it will pay him when he wants a design either to go to an artist and pay that artist for producing it, or to select the printer who he thinks is most likely to give him what he wants, tell him as clearly as he can the purpose of the design, ask him first of all to submit a rough black and-white sketch, and when that is approved to prepare the finished drawing. It must be to the interests of both sellers and buyers of printing to do what they can to eliminate waste. . . . Another word of advice to printers. It would pay you as a trade if the individual members concentrated more on holding their present customers. Give them the finest service possible; "do" them as little as human nature will allow, and keep the 'extras' low. The individual will find this a cheaper means of increasing his trade than spending so much money trying to tear his competitor's customers away from him." The foregoing extracts contain a considerable amount of truth that may well be thought over by master printers.

German Printings.

GERMANY is not a large exporter of reel paper to the United Kingdom. It is in printings or writings, not on reels, that German mills do an important business with this

Digitized by Google

country. Our total imports last year of paper of the latter class amounted to £836,468, and of this sum the supplies from Germany accounted for £253,334. Hitherto it has been the policy of the Association of German Printing Paper Manufacturers to maintain prices on a profitable level in the home market, and to export the surplus to the best advantage, which, particularly in times of glut, means undercutting. This competition has at times been keenly felt by the British papermaker. According to recent advices, several members of the German Association are in favour of its dissolution, and in the event of such a happening, increased competition would no doubt lead to a lowering of prices in the home market. It is reported that wholesale buyers are showing a disposition to hold back orders in anticipation of a break in the Association in the near future. With a decline in home consumption, the export trade would be pushed more actively than is the case at the present time. In discussing the condition of oversea paper export trade, the *Hamburger Frendenblatt* remarks that German manufacturers are in many cases so busy for home trade that they are not giving the same attention as before to exports. Hamburg commission houses are consequently paying attention to the distribution of Norwegian and Swedish products in current grades, while German papers are still preferred in medium and better descriptions. Japan, China and India are displaying enhanced purchasing capacity in better grades. London, formerly the central paper buying market for all oversea countries, is now being more or less superseded by Hamburg, the exporters of which city are paying growing attention to the paper trade.

A £1,000 PRIZE novel competition for colonial authors is being promoted by Messrs. Hodder and Stoughton. Four prizes of £250 are offered for the best novel submitted from a native or resident of the Dominion of Canada and Newfoundland, the Commonwealth of Australia and New Zealand, the Empire of India, and British Africa, and any colony or dependency not included in the other Overseas Dominions. The competition is open to all writers, wherever at present living, who are connected with the colony or dependency by birth or by residence of not less than one year.

THE annual meeting of the members of the Liverpool district of the Newspaper Press Fund was held on Tuesday. It was reported that the members in the district numbered seventy-one, and that local grants and pensions to distressed members, widows, and dependents during the past year amounted to £305.

An Example

of the many letters received every week from enthusiastic Linotype users.

Increased Work.

Speed in all Changes.

Standing Matter.

Avoids Overtime.

Anticipates Another Machine.

The Purchase Justified.

I am very pleased to say that since the installation of Linotype Model 4 Triplex Machine, the work has increased to such an extent that, without its many strong advantages, it could not have been undertaken. As it is, with the simplicity and quickness of change of body and measure, not to speak of the advantages of the Automatic Quadder, I have easily overcome the extra pressure. When I take into account that a large amount of the work at present in hand will have to stand for some time, and that this will be free from "pi," and not require any of the men picking various letters therefrom, it adds considerably to the value of the matter set. In fact, I don't know how I have done without the machine so long; but for it I would have been working overtime for weeks, whereas I have had no overtime at all. These facts give me every hope that, with the continuance of the present orders, I may ere long be compelled to consider the advisability of again placing an order with you for a machine similar to this with different body founts.

I should like to add that in every respect your points of recommendation in persuading me to purchase the machine have been fulfilled to the letter, whilst the courtesy and attention all through the transaction and afterwards have been most marked.

This is the experience of thousands of Linotype users. Linotype advantages are available to *every* Printer who permits himself to have them.

Financial.

Offices of the *British and Colonial Printer and Stationer*,

58, SHOE LANE, LONDON, E.C.

WEDNESDAY, Feb. 5th, 1913.

MONEY became scarcer as the end of the month drew near and the demand showed no falling off, but with the turn of the month there was a considerable turnover of money, and with a lessened demand for loans rates for short accommodation became easier. The market has been able to pay off several moderate amounts falling due at the Bank of England. Supplies were less plentiful yesterday and rates were firmer. There is an easier tendency in the discount market. In the bullion market several movements have taken place, but the Bank has purchased a considerable amount of bar gold, and the result to date is a net efflux of £20,500. The general tendency of stock markets has been satisfactory, the renewal of the struggle in the Balkans being taken calmly. The gilt-edged section is dull in tone, but Consols are a little higher than a week ago, the quotations being 74 1/8 to 74 1/8 for money and 75 to 75 1/8 for the account.

The miscellaneous industrial market has been very quiet this week, and yesterday prices fluctuated with considerable irregularity. In the section relating to paper and print a rise occurred on Friday in Amalgamated Press Ord. of ¼ to 6¾–7; and falls have taken place in John Dickinson and Co. of 1 in both the Cum. Pref. and the 2nd Cum. Pref. to 100—102xd. respectively; in *Lady's Pictorial* Pref. of ¼ to 2½–3, and in Weldons Ord. of 1/32 to 1 9/16—1 11/16xd. Business has been done during the past seven days in Amalgamated Press Pref. at 21s. 9d. and 21s. 6d.; in Associated Newspapers Pref. at 20s. 6d.; in Cassell and Co. at 5 1/16 and 5; in John Dickinson and Co. Deb. at 101½ and 100, and in the 1st. Cum. Pref. at 100xd.; in Ilford Ord. at 12s. 6d.; in *Illustrated London News* and *Sketch* Deb. at 64; in International Linotype at acc. 78½ and 79; in George Newnes Pref. at 15s. 3d. and 15s. 6d.; in Spicer Bros. Pref. at 9½; in Raphael Tuck and Sons Pref. at 98s. 9d.; in Waterlow and Sons Pref. at 7¾; in Weldons Ord. at 30s. 7½d., 33s. 1½d.xd. and 31s. 3d., and in the Pref. at 19s. and 20s.

DIVIDENDS AND REPORTS.

PERRY AND CO., LTD.—The directors of this company (manufacturers of steel pens) recommend payment of dividends, as for the last six months of the past year, as follows:—On the preference shares 2½ per cent., making 5 per cent. per annum (fixed rate). On the ordinary shares 7½ per cent., making 15 per cent. for the year, free of income-tax, and also a bonus of 1s. per share, free of income-tax, making a distribution amounting to 20 per cent. on the ordinary shares for the year, being the same as last year.

FINANCIAL NEWS.—The directors of the *Financial News*, Ltd., recommend a final dividend of 5 per cent. on the ordinary shares, which, with the 5 per cent. already paid, will make 10 per cent. for the year. They further propose to pay a bonus of 2s. per share, making a total distribution thereby of 20 per cent.; to place a further £2,500 to the second reserve fund and to carry forward the remaining undistributed profits.

COMPANY NOTICES.

FABRO PRINTING PROCESS CO., Ltd.

Notice is given that a meeting of the creditors of the company will be held at 13A, Finsbury-square, E.C., on February 7th.

SMART SET PUBLISHING CO., Ltd.

Notice is given, that the order of the High Court of Justice (Chancery Division), dated January 16th, 1913, confirming the reduction of the capital of the company from £10,000 to £5,000, and the minute (approved by the Court) showing with respect to the capital of the company as altered the several particulars required by the Statutes, were registered by the Registrar of Companies on January 31st, 1913; and the said minute is in the words and figures following:—"The capital of the Smart Set Publishing Company Limited and Reduced henceforth is £5,000 divided into 10,000 shares of 10s. each instead of the original capital of £10,000 divided into 10,000 shares of £1 each. At the time of the registration of this minute the whole of the said 10,000 shares have been issued and the sum of 10s. has been and is to be deemed paid up on each of the said shares.

COMMERCIAL INTELLIGENCE.

Re GEORGE FREDERICK HUNDLEY.
Testing a Printing Machine.

The first meeting of creditors in this case was held last Monday, at the London Bankruptcy Court, before Mr. W. G. Williams, official receiver. The debtor, described as of 16–18, Harp-alley, St. Bride-street, E.C., filed his petition on January 17th, and his public examination has been fixed for February 27th. A statement of affairs was presented showing liabilities £713 11s. 2d., and assets "nil." The chairman reported that it appeared from the debtor's statement that he started business as a lithographer in February, 1896, at St. Andrew's-hill, Queen Victoria-street, and subsequently traded in succession at Godliman-street, Cannon-street, Bread-street, and Harp-alley. In the early part of 1910 he was joined by two partners under the Limited Partnership Act, and they traded as Geo. F. Hundley and Co. In August, 1910, a fire occurred on the premises at Harp-alley and everything was burnt out. The firm was uninsured to the extent of £1,000, and suffered loss to that extent. Just before the fire they had delivered to them, for the purpose of testing, a valuable printing machine, which they had contracted to purchase subject to the test, but the fire occurred before the necessary steps could be taken. A claim was made by the vendors (W. and J. Rounce, Ltd.) for the price of the machine, about £95. Acting under legal advice the partners repudiated the claim on the ground that no purchase had been made as the test had not taken place. The trial resulted in a judgment being given against the firm for the amount claimed, and an appeal against that verdict was dismissed with costs. Owing to differences between the debtor and his partners the partnership was dissolved in September or October, 1910, the debtor continuing the business and paying £200 to the retiring partners. He kept the business together until the premises were rebuilt, and at the close of 1910 sold it to the City of London Lithographic Co. for £50, and was retained as manager at a salary of £3 per week. In March, 1911, he executed a deed of assignment under which he was to pay a composition of 5s. a week by three equal instalments, but was only able to meet the first payment, and being pressed by creditors he filed his petition. The debtor attributed his failure to loss by fire, the adverse judgment in the Rounce action, and to law cost. In the absence of any offer the case was left with the official receiver to be wound up in bankruptcy.

Re WILLIAM ALBERT WOODROFFE,
Printer's Manager.

The public examination of this debtor, described as of 20, Waghorn-street, Peckham-

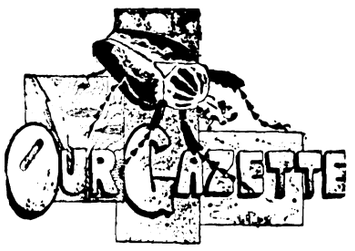
71, FLEET STREET, LONDON, E.C.

rye, was held last week, before Mr. Registrar Linklater, at the London Bankruptcy Court, the accounts showing a liability of £412 11s. 11d. against assets "household furniture, £5." In reply to Mr. Egerton S. Grey, official receiver, the debtor stated that in August, 1909, he became manager of the printing department of the Twentieth Century Press, Ltd., at a salary of £3 per week. In April, 1911, an action was brought by Mr. George Cox, of Hastings, against him and others for damages for libel published in a newspaper called *Justice*, of which the said company were the printers; the action came on for hearing in March, 1911, and resulted in a verdict against him and his co-defendants for £200 damages and costs. The publisher filed a bankruptcy petition at Hastings, and witness being unable to comply with the terms of an order for the payment of the debt under a judgment summons, filed his petition to avoid arrest under a committal order. The examination was concluded.

Re ANTONIE PHILIBERT.
"Le Courrier de Londres."



This debtor attended last week at the London Bankruptcy Court, before Mr. Registrar Brougham, for public examination upon accounts showing liabilities £4,605 13s. 11d. and a deficiency of £4,532 13s. 11d. Replying to Mr. Walter Boyle, official receiver, the debtor stated that he was a French subject, and in that country practised as an *avocat*. He came to this country in 1902 to study the English language and was appointed as French lecturer in the first instance in the London County Council schools, and subsequently at the Regent-street Polytechnic at a salary of £250 a year. In April, 1910, witness and two others joined in the printing and publication of a French weekly newspaper in London entitled *Paris Nouvelles*; one of his partners financed the paper, and witness acted as managing editor. In December, 1910, he took over the paper agreeing to pay £1,617 to his partners, the amount which had been expended in producing it up to that time. Subsequently friends assisted him by loans to continue it, but it was not a success; and in April, 1911, he changed the name to *Le Courrier de Londres*. By March, 1912, witness had got heavily in debt for advances to keep the paper going, the cost of production ranging from £40 to £45 per week, and on March 25th, 1912, with a view to obtaining further capital he transferred it to a company with a capital of £10,000, registered as *Le Courrier de Londres*, Ltd. As vendor witness received 6,000 £1 shares, and was appointed managing director at a nominal salary of £2 per week; sufficient capital was not subscribed to continue the publication, and the company was wound up on January 3rd, 1913. Witness was sued by a cash creditor who obtained judgment and instituted these bankruptcy proceedings. He attributed his failure and insolvency solely to the liabilities incurred in connection with the publication of the newspaper, his loss upon which he estimated at £4,274. The examination was concluded.

Re A. SAVILLE,
Stationer, etc.

The affairs of this debtor who carried on business at 179, Leigh-road East, Westcliff-on-Sea, came before Mr. Registrar Linklater, last week, at the London Bankruptcy Court, in reference to his public examination. The receiving order was made on November 25th, 1912, upon the petition of a creditor. Mr. Egerton S. Grey, official receiver, reported that the debtor had not surrendered under the proceedings, and no statement of affairs had been filed on his behalf. A letter had been received from his solicitor to the effect that

Digitized by Google

his present address was 31, Peter-street, Toronto, and notices of the proceedings had been sent there by means of registered letters, but no reply had been received. Under those circumstances he asked for the public examination to be adjourned *sine die*. His Honour made an order in those terms.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

MARDON, D. A. AND E. A., trading as Mardon Bros., Bishop's Stortford, Herts, newspaper proprietors and printers. Debts by E. A. Mardon. December 31st.

HOSKINSON, C., JOHNSTON, W. C., EDWARDS, J. A., and BODEN, A., trading as the Phœnix Bookbinding and Stationery Co., 3, College-lane, Liverpool, wholesale manufacturing stationers. Debts by C. Hoskinson, W. C. Johnston and J. A. Edwards. January 24th.

CANNING, R. S., and TAYLOR, J. M., trading as the "Kleen" Manufacturing Co., Chester, manufacturers of ink and office requisites. Debts by J. M. Taylor, who will in future carry on the busines. January 27th.

THE BANKRUPTCY ACTS, 1883 AND 1890.

RECEIVING ORDERS.

SMITH, H. S., 19, High-street, Starbeck and Station Square, Harrogate, Yorks, printer, stationer, etc. Date of order January 29th, made on a creditor's petition. First meeting of creditors, February 14th, 3 p.m., at the official receiver's office, The Red House, Duncombe-place, York. Public examination of Debtor, February 28th, 11 a.m., at the Courts of Justice, Clifford-street, York. Date of adjudication order January 30th.

FIRST MEETING AND PUBLIC EXAMINATION.

CHEVERTON, T. P., Bond-street, Cromer, Norfolk, printer and stationer. First meeting February 8th 12.30 p.m., at the official receiver's office, Norwich. Examination February 12th, 11 a.m., at the Shire Hall, Norwich.

NOTICES OF INTENDED DIVIDENDS.

WILKINSON, S., 47, Oldham-road, Failsworth, Lancs, paper dealer. Claims by February 12th to H. Booth, official receiver, Greaves-street, Oldham.

HARRINGTON, F. C. A., 11, Market-street, Eastleigh, Hants, stationer. Claims by February 19th to T. Easton, official receiver, Midland Bank-chambers, High-street, Southampton.

APPOINTMENT OF TRUSTEE.

STOKVIS, L., lately trading as Lewis and Co., at 125, Fenchurch-street, London, E.C., advertising agent. Trustee, A. R. K. Farlow, C.A., 50, Gresham-street, E.C. Appointed January 24th.

NOTICE OF RELEASE OF TRUSTEE.

DAVIES, B., lately trading at 32, Northgate-street, Chester, stationer and newsagent. Trustee, L. Hughes, official receiver, Crypt Chambers, Eastgate-row, Chester. Released December 19th.

EVERY variety of taste seems catered for in the February *Pearson's Magazine*, which is filled with first-rate fiction and light articles of topical interest. Major Philip Trevor tells some very funny stories in his anecdotal article on "Soccer Tricks and Tangles." Barry Pain's delightful old charlady, Mrs. Murphy, seems to improve the better one knows her, and her latest dissertation "On Experience" is full of shrewd wit and quaint sayings. "The looted Island" is an exciting instalment of the "November Joe" series; and in "Smith and the President's Daughter" F. E. Baily relates another episode in the career of Dare-devil Smith. Other stories are interesting, and the issue is well illustrated.

MESSRS. TAYLOR AND HENDERSON, King's Printers, of the Adelphi Press, Aberdeen, issue a calendar advertising their business which has at the top portraits of Queen Victoria, King Edward VII. and King George V.; the dates, on tear-off sheets, follow, and at the foot is the Royal arms and the firm's announcement. "Under Three Crowns" is the phrase used at the top of the calendar to indicate that Messrs. Taylor and Henderson have held the Royal appointment under the three sovereigns whose portraits are given. The calendar is excellently printed in gold and colours on a light brown background, and is neat and effective.

Printers' Managers & Overseers ASSOCIATION.

LONDON CENTRE.

The monthly general meeting of the London Centre of the P. M. and O. A. was held on Tuesday evening at the Old Bell, Holborn, E.C., when Mr. C. J. Gray (President) was in the chair, and the evening was devoted to Association business.

After the reading and passing of the minutes of the January meeting, the following nominations for membership were confirmed:—Mr. T. B. Lapworth (*British Medical Journal*—composing; Mr. G. H. Limbrey (Solicitors' Law Stationery Society, Ltd.—works manager); Mr. A. J. E. Overal (*Financier and Bullionist*—composing); and Mr. E. Proctor (Messrs. Dudley and Co.—works manager).

Some discussion ensued in relation to the Bohemian Concert (Ladies Night), when the chairman asked for the appointment of stewards. Mr. F. W. SEELEY said that he and his fellow stewards at the last Concert had come to the conclusion that it was arranged to hold it at a bad time of the year to get a good programme and a good attendance, and for those reasons they declined to act again as stewards. The CHAIRMAN pointed out that no alterations could be made in the arrangements now as the room had been booked, and the SECRETARY remarked that it was only a week later than last year, and that was one of the most successful concerts they had ever held. Ultimately Mr. JACK proposed and Mr. BERRYMAN seconded the appointment of Messrs. H. W. Jackson, W. W. Curtis, and R. B. Hardie as stewards for the next Bohemian Concert, on May 17th, and the motion was carried.

A lengthy debate took place on the question of "Trade Custom as to Notice," and correspondence with the Centres was read as also the report and recommendation of the Council. The discussion was private. The following resolution was carried:—

"That the Council, with reference to the resolution of the General Meeting of October 1st, 1912, having now received replies from all the Provincial Centres, unanimously agreeing that the reply of the Federation cannot be considered, recommend:

"That the National Printing and Kindred Trades' Federation be informed that the Printers' Managers and Overseers Association insists on maintaining the established trade custom as to notice for managers and overseers under all circumstances.

"That the Council be instructed to raise the question with each of the trade unions, so far as London is concerned, and that each Centre he recommended to adopt the same course with regard to the local organisations."

In reply to Mr. A. J. WILSON, who enquired when the report of the Committee on Future Policy would be presented, Mr. E. H. BERRYMAN, the chairman of that Committee, said that when they went into the question of the recommendations there were so many points to consider and re-consider that he thought, when they were able to present the report—it might be about April—they would agree that they had not taken too long over the matters they had considered.

The PRESIDENT having drawn attention to the annual dinner to be held on Saturday, at the Holborn Restaurant, the meeting terminated.

A SERIOUS accident occurred at the *Royal Gazette* offices, Falmouth, the other night, when one of the employees had his hand caught in a cylinder printing machine, and crushed so severely as to necessitate his removal to the Royal Cornwall Infirmary, where it was found necessary to amputate the first two fingers.

SPECIAL PREPAID ADVERTISEMENTS.

IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us by the first post on Wednesday to insure insertion the following day.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C.

The Guild of Press Correctors.

THE SECOND ANNUAL DINNER.

The Guild of Press Correctors held their second annual dinner the other evening at the Hotel Cecil, Strand, W.C., Mr. E. C. Austen-Leigh, Chairman of Messrs. Spottiswoode and Co., Ltd., the president of the Guild, in the chair, supported by the vice-presidents and others. There was a company of about seventy present, the principal guest of the evening being Sir R. Melvill Beachcroft. During the progress of the dinner, Kaydon Pearsall's band rendered a choice selection of music. After the loyal toasts had been proposed by the president and duly honoured,

Mr. A. G. Gronow proposed the toast of "The Guild of Press Correctors." He said the membership of the Guild was steadily increasing, and the principles of the Association were based on freedom of thought and action without being vindictive. These principles were necessary for the foundation of any great and successful undertaking. They had shown themselves adherents to those principles, and he trusted they would always exercise them in a manly, considerate, yet none the less decisive manner.

The President, responding, said the Guild was founded because of the events that happened nearly two years ago when there was a slight difference between some members of the trade unions and some people who did not see quite eye to eye with them. At that time the firm with which he was connected had to take a strong position, and so had several other firms, with the result that a large number of the readers stood by their employers. The secession of these readers from the trade union in defence of their principles resulted in the forfeiture of pension and other benefits, and it was to replace in some measure those lost benefits that the Guild was started. Their membership was increasing in a gratifying manner, the number successfully emerging from the entrance examination being most gratifying. Every effort was being made to establish a pension fund, and this it was hoped would be realised in the near future. One of the most satisfactory things in regard to the Guild was that it now had members in all parts of the provinces.

The Hon. Secretary (Mr. C. S. Frankling) proposed "Our Guests" in suitable terms, and gave some interesting details of the work of the Guild. He stated that he had received many letters of regret at inability to be present, the chief of which were from Viscount Wolmer, Lord Claud Hamilton, Sir Sidney Lee, Sir George Paish, Sir Henry Lucy, Sir Seymour King, Colonel Trench, Mr. Reginald Lake, Mr. Wray Skilbeck, Mr. R. Herries, and Mr. Howard Ruff, and mentioned that the majority of them were accompanied by cheques. He reported that the amount received towards the Pension Fund greatly exceeded the sum subscribed last year previous to the dinner, and as that was afterwards more than doubled, he trusted the same happy consummation would be achieved this year. The response of the members themselves to the invitation to contribute to the Benevolent Fund had also been gratifying, and during the ten months the scheme has been in existence had realised a considerable amount.

Sir R. Melvill Beachcroft, responding to the toast, said he noticed with regret two specific changes in regard to people of the present time when compared with those of sixty years ago. Modern people seemed to have lost their independence. He could not move outside his front door without stumbling over an inspector. People now seemed to depend upon the State and upon the municipalities. He held the old-fashioned view that that dependence had gone quite far enough. The second great change he noticed with regret was the loss of freedom. Trade unions had changed their character. The love of politics introduced by the leaders of trade unions had, in his judgment, done everything that was possible to ruin the real object of trade unions. He was astounded that trade unionists should allow themselves to be dragooned by those who ought to know better.

Mr. Brooke (vice-president), proposed the toast of "The Ladies" in felicitous terms; and Mr. R. A. Austen-Leigh responded in a humorous and racy speech. He commented wittily on the condition of the reader, whose word was law in the printing office, as contrasted with his position as a mere individual amongst others—for instance, he often felt curious to know whether in the privacy of the domestic circle he was always permitted to maintain his dominating attitude. However, in the gathering that night at any rate no question of the sort arose, and he ventured to say that the ladies around him would agree when he said on their behalf that they accepted with pleasure the recognition of the grace their presence had lent to this pleasant function, so aptly expressed by the proposer on behalf of the Guild.

In reply to the toast of "The Vice-Presidents," proposed by Mr. Hodges (vice-chairman of the Council) in appreciative terms, Mr. W. A. Waterlow expressed himself as more than gratified with the progress of the Guild, which had his warmest sympathies and would receive his heartiest support. It was a great satisfaction to him to read the resolution passed by the Council of the Guild deprecating the Treasury recognition of a given number of hours for a working week, without any mandate for such recognition by way of an Act of Parliament passed for the purpose. He gave instances of the value of the reader in the work of a general printing office, and in particular one case where the acumen of the reader had avoided a ludicrous mistake.

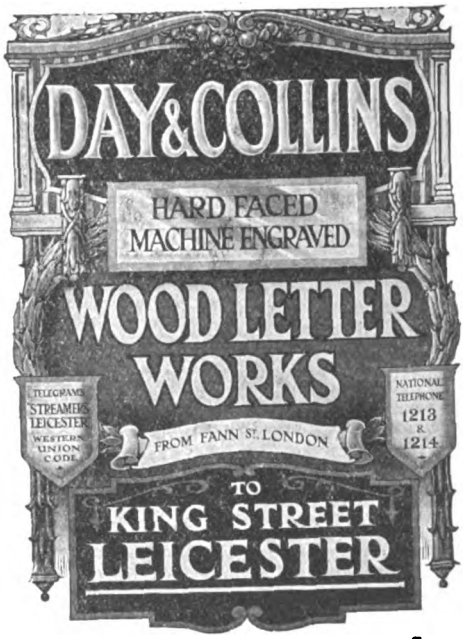
Mr. P. Purdon (chairman of the Council) proposed the health of "The Chairman." He recounted the great interest the President had taken in the Guild, and the valuable assistance he had given both financially and by wise suggestions for the consideration of the Council. He thought the success of the Guild would depend largely on the attitude taken by employers as to the quality of the men employed. The chairman briefly acknowledged the toast and said he would certainly do all in his power to further the interests of the Guild, and thanked the members for re-electing him to the honourable office he now held in the Guild, of which he was naturally very proud. He read a further list of subscriptions he had received during the dinner, and a most enjoyable evening terminated with the singing of "Auld Lang Syne."

The second annual general meeting of the Guild was held at The Old Coffee Pot, Warwick-lane, E.C., the chairman of the Council presiding. The annual report stated, *inter alia*: "It is gratifying to be able to record steady progress, though in many quarters a certain mistrust still exists owing to the unfortunate strike of February, 1911. In course of time, when the policy of the guild becomes more fully understood, it is believed these misapprehensions will disappear entirely. The anticipations with which the entrance examination was instituted have been fully realized, and this test of ability will eventually carry great weight with intending employers, guaranteeing as it does the competency of members of the guild to occupy the post of reader. The examination has, moreover, prevented our ranks from being leavened with undesirable and ill-equipped members, and thus preserved the status of the members as a whole. The quarterly meetings in July and October were great successes from a social point of view, and the invitation extended to ladies to participate was justified by results. No fewer than forty-two berths had been secured for members through the agency of the guild during the past twelve months, most of which would probably not otherwise have been so readily accessible to them. Members in their own interests should endeavour to strengthen the Guild by every means discoverable. The Guild had necessarily years of up-hill work before it, and only by the solidarity of its members and their loyal co-operation would it rise to the position of eminence which undisputedly awaited it." The balance-sheet, which showed a sum of £82 odd standing to the credit of the guild at their bankers, together with the report, was unanimously adopted. The whole of the officials were then re-elected with acclamation, and the council was strengthened by the inclusion of several additional names. A glowing tribute was paid to the work of the secretary, whose work was entirely honorary, with the result that the whole of the business for twelve months, including the rent of their office, had been effected at the very small cost of £19. Thanks having been rendered to the chairman, vice-chairman, and the hon. secretary for their services, the meeting entered on the consideration of the amendment of the rules and other business.

THE Darwen branch of the Typographical Society has become affiliated to the Darwen Trades Council.

Canada's Imports and Exports of PAPER.

A QUARTERLY dividend of 1¾ per cent. has been declared on the preferred shares of the Riordan Pulp and Paper Co.



Official figures show a very considerable increase in the total imports of paper and manufactures of paper into Canada during the seven months ending October, 1912, as compared with the same months of the previous year.

The imports totalled $4,672,912, as compared with $3,526,125 in the 1911 period, those from the United States amounting to $3,171,255 and those from the United Kingdom to $1,040,307.

The exports of paper were valued at $2,763,255, as compared with $2,058,161, the value going to the United States being $1,780,492.

The exports of wood blocks for pulp in the seven months were valued at $4,687,183 as compared with $3,550,888, the whole amount exported going to United States manufacturers.

A Poster Competition.

The directors of the Grocers' and Bakers' Exhibitions held annually at the Royal Agricultural Hall, Islington, propose offering prizes, viz., gold, silver and bronze medals in a Poster Competition, the object of which is to bring before the wholesalers, retailers and owners of proprietary articles of the country designs for posters suitable for their use and incidentally, of course, to encourage grocers and provision dealers to use posters in advertising their business.

The competition will be held during the Exhibition in September next, and will be open to all who have any ideas on the subject in order that the large number of those visiting the Exhibition may have placed before them the most suitable designs for the promotion of their trades. It is proposed to make the entry fee for each design for a poster sent in £1 1s., which will go towards the expenses of the display, judging, etc.

We understand that the Exhibition authorities will be glad to hear of any suggestions or alterations regarding the particulars for this competition from any firms who may be interested.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Japan's Paper Industry.

The Tariff Effect on Imports.

(From the "Japan Trade Review.")

The importance of the Austro-Japanese Commercial Treaty on the paper industry of Japan is so great that the remarkable animation of the Japanese made papers, which has followed the conclusion of the treaty, may be looked upon as the determining factor and ultimatum on the future of the papermaking industry of the Japanese Empire. In the past, we have seen the first new era opened in this industry at a time of remarkable economical expansion of Japan which followed the China-Japanese War, and the second new epoch marked after the war with Russia. The establishment of a number of paper mills on a large scale, such as those of Tomokomai, and Ebetsu, each producing no less than 6,000,000–7,000,000 lbs. per month, coupled by the general tendency of enormous increase of demand at home and in China, cannot but bring about once more a new phase. The enormous swell in the outputs of Japanese mills is evident in the fact that in the last five years an increase of 57 per cent. has been effected. Supposing the amount of output for 1912 to be 260,000,000 lbs., the Japanese papers being excluded, it is none the less an advance of 16 per cent. compared with last year. Though this percentage is a little smaller than the maximum in the past, the remarkable progress brought about during this year is noted in the extraordinary enhancement in value which is due to the fact that Japanese mills turned their effort to the manufacture of superior quality goods since the enforcement of the new tariff, the kind of goods which had been chiefly imported from the West.

The chief supplying countries to Japan are Germany, Great Britain, Sweden, Belgium and Austria. Since the enforcement of the new tariff, the amount of paper imports has been exceedingly reduced, but it should not be overlooked that the quotation of papers has moved in inverse ratio to the duty imposed. An interesting phenomenon in this connection is observable in the fact that the sum of paper imports for last year shows a diminution of 16 per cent. as compared with the preceding year, the figure for which shows the maximum on record. It would appear natural to argue that a striking advance must be seen in the figure for last year, on account of the powerful purchase of goods in anticipation of the raising of tariff. Nevertheless, the fact has proved just the opposite.

It goes without saying that printings occupy the foremost position in the paper market of Japan, of which "news" amount to one-third of the annual total output at home. Printings also amount to one-third or four-sevenths of the aggregate of paper imports. As the result of the substitution of the tariff *ad. valorem* for the specific tariff, the imported goods of superior quality belonging to this group, such as art paper, were lowered in the ratio of duty imposed upon them, and this fact, coupled by the general increase of demand at home, is stimulating their trade. A similar tendency is observable also in the coloured printings, there being no material difference between the duty of 0.9 sen per pound according to the new tariff and the one per cent. of the former *ad. valorem* tariff. Except these several higher descriptions, Japanese home mills, by dint of the protective tariff wall and the progress of the industry, are now capable enough to compete successfully with the imported goods in quality as well as in price. The commercial attachés and other authorities of Germany, Austria, and Belgium for Japan have been investigating the cause of drawback in imports of this line, and they seem to have come to perceive unanimously that it is principally due to the natural development of the art of manufacture. Thus, in the case of a number of varieties of printings, the prohibitive policy has already accomplished its aim.

Next to the unglazed "news," printings of lower kinds may be mentioned as the varieties which have received a serious blow in trade. This is also the case with the drawings of ordinary qualities. These papers have an extensive market, as they are used by school children, and the Japanese mills are now ready to meet their demand. It calls our attention to the fact that the quotation is now more or less lowered in the news printings, writings, and drawings. With the news printings, a drawback of about 3 per cent. is observable in the current price, in comparison with the quotation of five years ago; with the writings for school children's use, the quotation at present offered by the Tomokomai and Ebetsu mills is about six sen, whereas the imported kinds value in average six sen (about 2½d.) and half a pound; the ordinary drawings are now amply supplied by the Fuji and Mitsubishi mills with the market price of 6.5 sen (about 2d¾.) against the quotation for the imported kinds of 11 sen (about 5d.), and accordingly there has been no importation of these kinds since last June. With the last mentioned, it is to be noted that the Fuji and the Mitsubishi mills offered a quotation of 10 sen (about 3¾d.) when they commenced the manufacture of these drawings, which, however, was met by the keen competitive prices of foreign mills, the subsidy by the European Export Association having been increased to 1.8 (about ½d.). In spite of the import duty of 2.6 sen per pound (about ¾d.), the European drawings were so powerful, that it seemed for a while almost impossible for Japanese mills to continue the manufacture in this line, and it took a space of ten months for the latter to compete successfully with them. As for the drawings of superior qualities, however, there is yet no room for the development of the home make, and we can reasonably expect the natural increase in the importation of the higher quality drawings in the coming years, though with the common varieties there seems no room left for the foreign goods to secure a firm market in Japan.

The increase noticed in the demand at home for packings is really remarkable in accordance with the recent development of productive industries, which require great quantities of wrappers for their commodities. Besides this we notice the encroachment of packings to the lines where other materials have hitherto been employed, such as their replacement for the mats for silkworm's bedding in the sericultural districts, the driving out of the Japanese papers from use as pouches and bags and sacks to put in miscellaneous articles, the expulsion of the Japanese water-proof wrappings, and so on. The packings of low qualities are now almost amply supplied by the home mills, but the high quality goods are not manufactured by them, and consequently they will have a promising future as an import item. The present specific tariff imposes on the foreign packings 11.2 sen a pound (nearly 5d.), and this rate, compared with the ten per cent. of the former conventional tariff, shows no material difference, and the protective policy exerts comparatively little influence in this line. A similar phenomenon is observable in match papers, the increase of import duty being only 0.35 sen (about ⅛d) a pound, but the competition of the Japan make and the foreign make is very keen, the condition being favourable rather for the former. With cardboard and pasteboard, the nice qualities which the Fuji mill commenced to manufacture since last March proves that price is the sole object of competition of the home and Western manufacturers.

The imitation Japanese paper and the tissue paper have been strikingly diminished already before the revision of the tariff. The effect of the protective policy upon all the imitation varieties has not been evident till the first half of this year has elapsed, owing to the inertia of the trade in the past, though the activity of the home mills has been expended powerfully in this direction. At present, however, the accumulation of the imported goods is gradually increasing, while the outputs of the home mills are increasing their supply.

To sum up, we see evidently the success of the paper manufacturing industry of Japan in unglazed news printings and the Japan absorbing paper; and remarkable progress in the imitation qualities, common drawings, and card and pasteboards, owing to the enforcement of the protective tariff and the progress in the art of papermaking on the part of our manufacturers. For the printings, writings, drawings of high qualities, on the contrary, the condition is favourable for the imported goods, in accordance with the striking increase of general demand at home for them on the one hand, and the smallness of the influence of the revision of tariff upon them on the other. This tendency will probably undergo no abrupt alteration, though the gradual change of the market scene will sooner or later result if the industrial undertakings on a grand scale, such as The Kiso Kogyo Kaisha (The Kiso Industrial Co.), which will commence its work in the near future, and the Nippon Paper Manufacturing Co., the establishment of which is now rumoured, would bring the anticipated results.

After referring to the high cost of pulps in the European markets, the article goes on to say that the exportation of the products of paper mills in Japan to the Chinese markets has been increasing, and the conditions of trade for the last half of 1912 was presenting a new aspect. Moreover, the quotations of bar silver being favourable towards Japan, the net profits of the mills seem to be not less than 18 per cent. On the other hand the rising of the cost of production is engaging the attention of those in the industry. In respect of wages alone there has been an increase of 10 per cent. "These strong competitive elements," adds the writer of the article, "being now active against the favourable circumstances which are working for the development of the paper manufacturing industry in Japan, the future of the trade in the Far East is a topic great in importance and full of interest."

THE Gujarati Typefoundry, of Bombay, has issued a catalogue of electro blocks which they offer to the printers of India, and the East generally. There is a great demand for blocks suited for native purposes, and emblematical of the lives, pursuits and religious beliefs of the people, and a considerable portion of the selection shown in the catalogue is of that character, and engraved by the firm's experts. There are also commercial and other designs in profusion that offer something for every taste. Letter headings, account and invoice blocks are also shown, and a feature is that the descriptions are given in Sanskrit, Gujarati, and Marattic dialect in different varieties of types to enable a printer to judge the subject matter. The Gujarati Foundry is keeping well to the front and is supplying Indian printers with up-to-date material, presses and appliances of every sort, for which there is a considerable growing demand in our Eastern dependencies.

Safety Bronzing Cabinet

Patent No. 11291/10.

Cabinet Open, and showing Detachable Tray.

BEST QUALITY WORK
NO DANGER TO OPERATOR
NO WASTE OF BRONZE
INCREASED OUTPUT

THIS Bronzing Apparatus has been introduced to enable Bronze Powders, etc., to be applied by hand without any particles of powder floating about the room, or being inhaled by the operator.

It consists, as shown in the illustration, of a box fitted with hinged transparent top and transparent ends. The side nearest the operator has apertures fitted with flexible sleeves with springs to close round the wrists of the operator, so that, although his hands and arms are free to move inside the box, no powder can escape.

The bottom of box is perforated and allows the surplus powder to fall into a detachable tray underneath. The sheets or cards to be bronzed are fed direct from the platen into a narrow horizontal slit fitted with sloping feed board.

This apparatus is made throughout in our own Works, and the edges of the lid and detachable parts are made dustproof. There is no waste of bronze and no injury to the health of the operator, and nothing to wear out. The bronzing is executed immediately under the eyes of the operator, ensuring finest quality work.

JOHN HADDON & CO.
SALISBURY SQ.
FLEET STREET,
LONDON, E.C.

Cabinet in use.

This Cabinet is designed to cope with work up to and including Foolscap Folio in size **Price £3-3-0**

Other sizes to order at proportionate prices.

ACCEPTED BY H.M. FACTORY INSPECTORS. **FACTORY AND WORKSHOP ACT, 1901. This appliance complies with the instructions contained in this Act and which reads as follows: "Regulations 2.B. Appliances so constructed as to prevent as far as practicable the escape of dust into the air of any occupied room."**

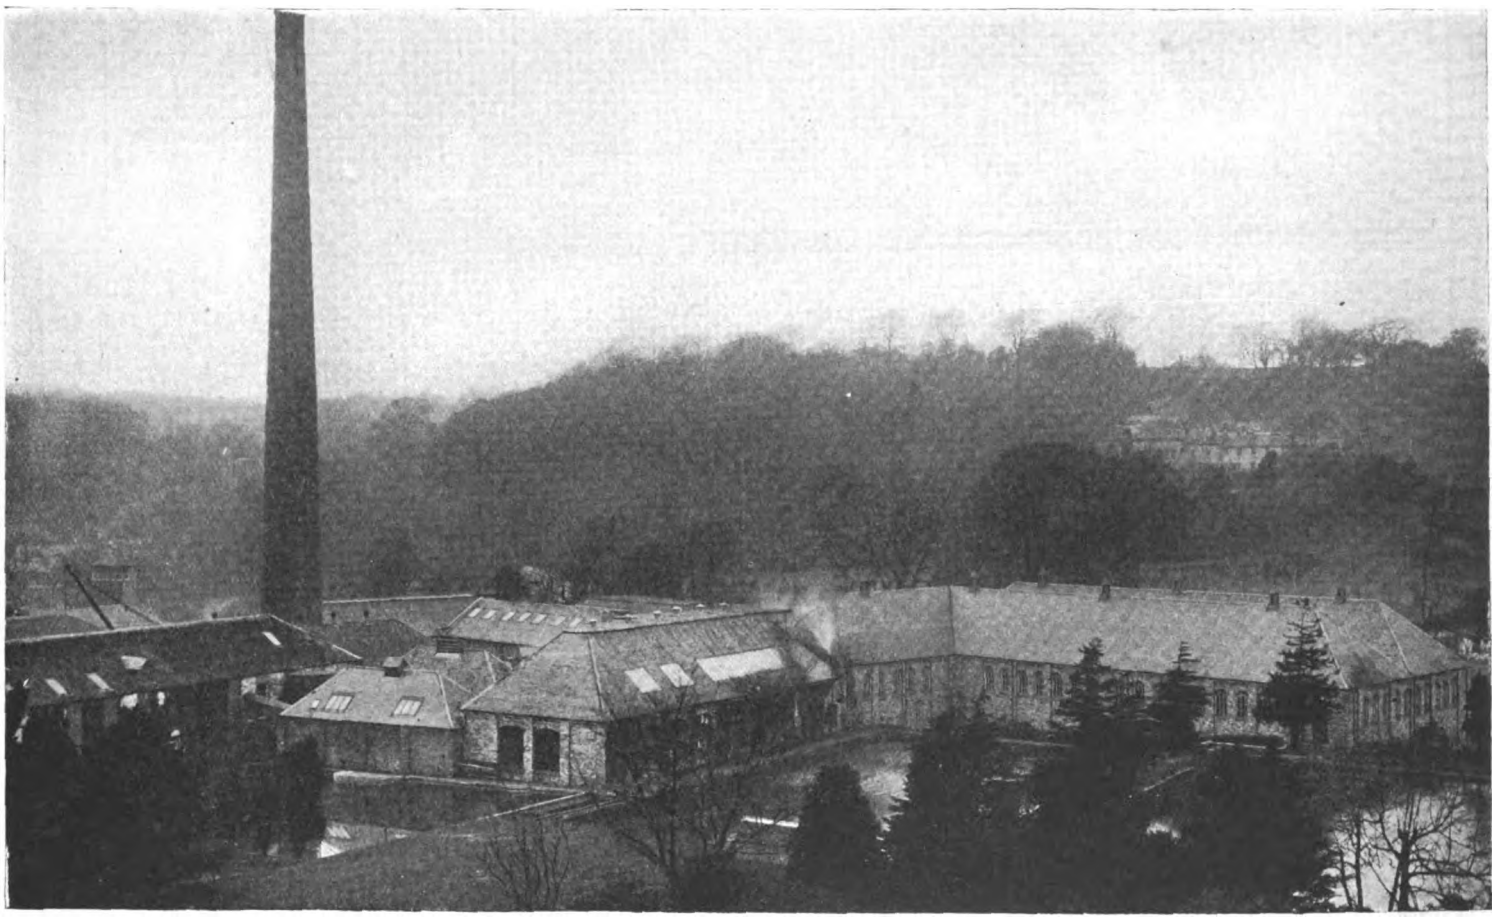
SOME CONTRIBUTIONS TO



Scottish Paper Trade History.

VIII.

Most of the Scottish paper mills founded in the eighteenth century have already been mentioned, but two or three still remain to be dealt with. Amongst these is No. 28, Polton, said to have been started soon after 1750, and which has been since 1798 in the hands of a well-known local papermaking family, the Annandales, whose name has long been associated with paper manufacture in the Esk Valley. As far back as 1756, William Annandale, of Auchendinny—on the North Esk, about midway between Penicuik and Polton—was making writings, and was in that year awarded two silver medals by the Edinburgh Society, for making a larger quantity of those sorts than any other entrant in a competition of that nature. He does not, however, appear to have been related to the Annandales of Polton. There was a mill at Auchendinny (No. 24) as late as 1832, in the hands of the Cadells, and in 1825 it was apparently on about the same scale as that at Polton, containing two vats and one machine.

Prior to 1774 Polton Mill appears to have been worked by a co-partnery, under the title of the Polton Paper Mills Co. The business was presumably not successful, as in the *Edinburgh Advertiser* for July 8th, 1774, is an advertisement of the sale of the premises by public roup. The mill then contained four vats and three "engines," no doubt beaters. The company had an Edinburgh warehouse in Skinners' Close. At that period, that branch of the Annandale family which is now seated at Polton was engaged in papermaking near Newcastle, the great-grandfather of the present Mr. Jas. H. Annandale, of Polton, having a mill on the Tyne, where he was assisted in the business by his two sons, Alexander and John. These latter, however, considered that there was not sufficient scope for their energies in their father's mill, and accordingly resolved to start business on their own account elsewhere. John remained in the old neighbourhood, founding the well-known firm of John Annandale and Sons, at Shotley Bridge, whose mill has only recently been shut down. The elder son, Alex. Annandale, eventually bought Polton Mill about 1798. It was of course then a hand-made mill, but by 1825 a Fourdrinier machine had been installed, though two of the vats still remained. Writings and printings were then the principal makes. It may be interesting to chronicle the fact that when the Fourdrinier machine output was originally introduced into the market it was eulogised as being superior in all respects to the hand-made article, and was thus offered at a higher price, as being of much greater regularity, etc. There is no doubt that up to the time when the premature rush for a big out-turn degenerated the quality of machine-made papers there was much to be said in favour of the assertion, indeed with the full recognition of certain factors a sheet of paper can be made on a machine equal to any that can be made by the hand process. By 1832 another of the vats had been shut down. The firm's Edinburgh warehouse was then in Adam's-square. About 1835 Mr. Annandale took his son (the father of Mr. Jas. H. Annandale) into partnership, and in due course, *i.e.*, about 1858, that son's eldest son came in in his turn. In 1860 there was a 57-in. machine, but the last of the vats had been turned out about 1846, when the mill was burnt down. In 1863 Mr. Alex. Annandale considerably extended the scope of the business by erecting a new mill at Beltonford, near Dunbar, where a 74-in. machine, and later (1873) a 90-in. were put down, and run on tub-sized and other makes. Mr. Annandale, junr., assumed control of the new mill, and his energy and enterprise soon placed it in the front rank of Scottish paper factories. Early in 1866 it was making some twenty tons of printing paper a week, on the one machine that was at first put in. The establishment was assessed by the local authorities, for valuation purposes, at £2,000, but Messrs. Annandale and Sons contended, in an appeal they brought against the decision, that they should be assessed on the same basis as other Scotch paper mills. The average valuation of twenty-two of them worked out at about 11s. 2d. per ton of paper made, and the assessment of Beltonford was ultimately reduced to correspond, *i.e.*, to £580. A few months later, owing to the slackness of trade, the firm announced a reduction of ½d. per lb. in the price of fine papers. In 1885 they introduced a new watermarking process, which was patented. In the following year the business was converted into a public company, which took over both the Polton and Beltonford Mills. The latter was thoroughly overhauled, with the result that 70 tons per week was turned out from the restart in 1887, or about double the previous output, and within another five years the mill was making 80 tons a week. In April, 1892, Beltonford mill was burnt down, and the directors decided not to rebuild it. Some 400 hands were then employed, so that the enforced shut-down was a source of considerable loss to the locality. At the end of 1899 the company was reconstituted under the former title of Annandale and Son, Ltd., the new concern, which had a nominal capital of £130,000, taking over the Polton mill and other property of the old one. The mill is situate close by the Polton branch of the North British Railway, about eleven miles from Edinburgh, and contains a 66-in. machine, which runs on superfine and T.S. writings, bank, account book and envelope papers, as well as the "Polton Patent" linen and ledger papers—the latter first manufactured at the end of 1899—and Polton linen bond. Though the mill now only runs one machine, it is capable of an output more than double what used to be attained by the two old machines. Very little wood pulp of any kind is used, pure rag papers being the Company's speciality, which is well in keeping with the traditions of this old Scotch mill.

We have just had occasion to mention the medal awarded to Wm. Annandale in 1756.

THE POLTON MILLS OF MESSRS. ANNANDALE AND SONS, LTD.

It practically inaugurated a praiseworthy and probably not altogether unavailing effort to popularise the trade. Following the Act of Union in 1707, and the conditions of social and commercial stagnation which were to some extent the outcome of it in Scotland, came the disturbances and general feeling of insecurity caused by the Jacobite risings of 1715 and 1745. After the Stuart hopes were finally crushed at Culloden, and matters had settled down, a fresh era of prosperity began and considerable efforts were put forth in various quarters to improve and extend Scottish industries and manufactures.

In May, 1754, a "Select Society for the Encouragement of Arts, Sciences, Manufactures and Agriculture," was founded at Edinburgh. At one of its first meetings, a Committee was appointed to carry out the objects indicated by the Society's name, and

it came to the conclusion that prizes should be offered for various inventions and improvements in connection with trade and manufacture, as well as in Art and Science. One of the first subjects taken up was the manufacture of paper. The report upon it states that "to the shame of this country (Scotland) it is supplied with paper from countries which use not half the quantity of linen that is here consumed. In order to remedy this defect; to render people more attentive to their own interest, as well as to the interests of their country; to shew them the consequence of attention to matters which may seem trivial; it was resolved (by the Society), that for the first, second, third, fourth and fifth parcels of linen rags, gathered within a limited time, a reward be assigned in proportion to the quantity and goodness of each parcel." The prizes were of the respective values of £1 10s., £1 5s., £1, 15s. and 10s., and the quantity and value of the rags was to be ascertained by a declaration from the managers of the mills to whom they were sold. The Scots rag merchants of that day seem to have been largely of the female sex, as at least four of the prizes were awarded to ladies. For the following year (1756) the scheme was extended, a prize of two guineas being offered for superfine rags of linen, cotton, muslin, etc., worth 5s. a stone or more. From the fact that there were no entrants for this it may be assumed that no such rags were produced in Scotland in any large quantity. A guinea was offered to "the gatherer of the greatest quantity of fine rags, comprising linen, cotton, muslin, etc., not under thirty stone weight, worth from 3s. to 5s. per stone," and a like sum for a similar minimum quantity of "all sorts of linen and tweeding, etc., that have passed through the process of bleaching, and blue checks, worth from fourteen pence to sixteenpence per stone." Silver medals were offered for the greatest quantity above six reams of (1) best post paper; (2) best *pro patria* paper (*i.e.*, writings); and (3) best printing paper. The prize for bleached rags fell to Jean Christie, one of the successful candidates in the previous year; the apportionment of those for paper was referred to in a letter which was published in our issue of October 25th last.

The result of these competitions appears to have been considered satisfactory, as for 1757 the Society still further extended its efforts to improve the Scottish paper trade. For the collection and sale of 300 stone or upwards of white rags for papermaking, worth not less than 1s. 2d. per stone, a guinea was offered, and it was secured by Janet Mitchell of Tranent, who collected 606 stone; to the next six highest gatherers 10s. 6d. each was paid, the quantities varying from 554 stone, got together by Wm. Scot, of Dalkeith, down to 295 stone, and there was still another half dozen competitors who got 5s. each, their lots averaging down to 178 stone, which represented the collection of Jean Christie aforesaid. It may be interesting to place on record here the names of those Scotch paper stock gatherers, of more than a century and a half ago. They were Jean Ross, Ann Walker, Elizabeth Sharp, Barbara Ballingall, Jno. Macpherson, Wm. Innes, Elizabeth Morrison, Margaret Mackenzie, John and Peter Robertson, but their places of abode are not stated in the only account the writer has been able to consult. A prize of a guinea was offered "to the person who shall collect, in any private family, the greatest quantity of superfine rags for the paper mills, worth from 2s. 6d. and upwards per stone. It went to Miss Betsy Gibson, the daughter of an Edinburgh merchant; a second prize of 15s. going to Miss Jeanie Hill, also of Edinburgh. Five prizes were offered for paper, the minimum quantity to be submitted being at the same time mostly raised from 6 to 20 reams, or more. For post and "propatria" sorts silver medals were awarded to Messrs. Hutton and Fleming, papermakers in Edinburgh, and they also got one for a parcel of more than 40 reams of brown cap in royal size, for packing purposes. Another Edinburgh papermaking firm, Gavin Hamilton and Co., were awarded silver medals for printings and "deep blue paper for lapping fine linen." Similar prizes were offered in 1758, under like conditions, and there was one of two guineas for the best pair of brass wire paper moulds. This was taken by "Walter Moodie, near Pennycuick,"* the first Scottish paper mill furnisher of whom the writer has found any record. The prizes for rag collecting went in several cases to previous winners in that branch, though the names of Geo. Livingston and Janet Ritchie are fresh. Miss Gibson was again the successful family rag saver, and got two guineas by way of reward. Wm. Annandale, of Auchendinny, again secured a silver medal for post paper; those for propatria, printing and brown going to Henig and Hutton, but that for blue lapping to Hamilton and Balfoor,† then a well-known Edinburgh bookselling firm, who were printers to the University there, and perhaps had their own paper mill. For 1759 the minimum quantity of paper for which prizes were offered was raised to 100 reams in the case of post, propatria and printing, and the amounts awarded were increased to six guineas in these instances. It was stipulated that the paper should be lodged in some warehouse in Edinburgh, so that the Society could be satisfied that all the reams were of "equal goodness."

In 1760 thirty-nine prizes were offered for the collection of rags, ranging in amount from five guineas downwards. In addition to the prize for post paper a further sum of five guineas was handed to the prize winner, for the purpose of being distributed to the most deserving of his workmen. There were no prizes for printings or writings. For the following year there was practically no change in the arrangements, save that it was stated that persons employed in lapping houses and manufactories were excluded from competing for the prizes for rag collecting. The quantities of rags produced exceeded those of former years, and all the prize winners seem to have been ladies, at any rate all those named were. The largest quantity got together produced a reward of five guineas for Helen Thomson. All the prizes for paper went to Gavin Hamilton and Co. Next year (1762) a silver medal was offered for the best writing post, or "King's Arms" paper (no doubt so watermarked), not being less than 40 reams. This also went to Hamilton's, who took four out of the five prizes for paper, Feming and Hutton securing that for packing paper. The first prize for the collection of superfine rags, worth not less than 2s. 6d. per stone, went to John Macpherson, who collected 35 stone, 3 lb. He also gained it in 1763, with 55 stones, 12 lb.

By this time the novelty of the thing had worn off, and in Scotland, it was said, "every disinterested plan of public utility is slighted" as soon as it grew stale. So in 1764 the Society had to make an appeal for more subscriptions, and at the same time to cut down the number of prizes offered. Those for rags were retained, but those for paper were discontinued. The writer has not been able to trace any later references to the Society, so that it presumably ceased to exist shortly afterwards. The facts that have just been narrated go to prove that the Scottish paper manufacturing industry was on only a very limited scale at this period, as the names of only four paper manufacturers are preserved in connection with all the competitions. The earliest Edinburgh Directory (Williamson's) was not published until some ten years later. In the edition for 1775-6 we find only one papermaker mentioned, viz., James Spottiswood, of Miln's Court. Three years later he had removed to the head of Niddry's Wynd, and at the same time Robert Douglas, of the Old Fishmarket Close, was referred to as being a papermaker.

* Some time later Moodie must have moved into Edinburgh, as we find him located at Castle Barns there as late as 1776.

† The Gavin Hamilton already mentioned appears to have been a partner in this firm, and probably had the "Paper Miln on the Water of Leith," of which the writer has found mention about this time.

(To be continued.)

AN international competition has been organised by our Italian contemporary, the *Risorgimento Grafico*, the subject being a design for a modern book. Each competitor must send in designs for the following pages: Fly leaf, title-page, dedication page, first page of text, page of text with notes. The aim of the competition is to render the book the object of study and research for the purpose of modernising its form; therefore no limit is placed on the size or style of the type; it is only obligatory to present well finished designs, such as can be reproduced photomechanically. The competitors can make use of any decorative form; full liberty is permitted with regard to the headings adopted; two colours can be used. The date-limit for the despatch of the works is the midnight of March 31st, 1913. The jury, nominated by the direction of the *Risorgimento Grafico*, will meet in Milan, and the result of the competition will be published in that paper. All enquiries about this competition should be addressed to the Direction, Milan (Italy), *via* Tadino, 51.

Canadian Paper Trade.

Remarkable Developments in News Print Manufacture.

In reviewing trade conditions during 1912, the *Toronto Globe* publishes a contribution by Mr. E. B. Biggar, of Toronto, who states that last year witnessed the greatest development the Canadian pulp and paper industry has ever known.

"A remarkable feature of this development has been the number and capacity of the new mills devoted to news print, these mills representing the last word in mill designing, in capacity of paper machines and in rapidity of production. The following is a list of these news print paper mills:—

	Daily capacity in tons of paper.
Power River Co., B.C.	200
Dryden Timber and Power Co., Ontario	40
Spanish River Pulp and Paper Mills, Ontario	155
Ontario Pulp and Paper Co., Sturgeon Falls, Ont.	45
Sault Ste. Marie Mill, Ontario ...	200
International Falls Mill, Fort Frances, Ont.	100
Ontario Paper Co., Thorold	120
Price Brothers and Co., Jonquieres, Que.	150
Edwin Crabtree and Sons, Quebec	20
Smaller new mills and additions to old mills, say	170
	1,200

"We have thus an increase of 1,200 tons per day in news print. It is not strictly correct to say that this is the work of a calendar year, for some of these new mills were started in the latter part of 1911, while two of them are not yet finished and will not be in operation till the middle of 1913, but the increase which can be credited to 1912 will still be about a thousand tons per day.

"Another noteworthy feature of the industry is the increase in the production of kraft pulp and paper. The production of kraft has been increased during the year by about 100 tons per day, while one new mill produces sulphate (kraft) pulp to the amount of 90 tons per day for sale to other mills. There is a large and growing market for kraft, and Canada can compete successfully with Scandinavia, Finland, Germany and England in the markets of the world for this class of paper, as well as news.

"New ground wood pulp mills have been built, with an aggregate capacity of 200 to 250 tons per day, and sulphite or chemical fibre mills to the capacity of 100 tons per day.

"Speaking of wood, the price of spruce in Canada has advanced during the year by about $1.50 per cord."

American Imports of News Print.

During November the United States imported news print, as under, from the countries mentioned:—

	Pounds.
Belgium	174,755
Canada	21,994,372
England	63,625
France	168
Germany	33,090
Netherlands	134,060
Norway	137,145
Scotland	35,248
Sweden	320,308
Total	22,894,771

Of the total import 78 per cent. was admitted free and 22 per cent. paid duty. The former all came from Canada and was valued at less than 2¼ cents per pound.

The imports in pounds for January-November, 1912, and the previous year were:—

Jan.-Nov.	Free.	Dutiable.	Total.
1912	108,926,997	38,975,685	147,902,662
1911	19,088,000	81,648,000	100,556,000

THE printer who succeeds in taking a piece of plain copy, a raw photograph, a crude drawing, an undeveloped idea, and with this material produces a business bringing book, such as many of the modern catalogues are, has attained as high honour in his line and is deserving of as much recognition from business men, from writers, from those who give credit in any line, as is any architect, engineer, surgeon or other skilled worker in the great field of achievement.

BETTER PRICES WANTED. MORE UNIFORM ESTIMATES. FAILURE OF MASTERS' CLUBS. LESSONS FROM AMERICA. EFFORTS OF FEDERATION OF MASTER PRINTERS. WHAT IS THE P. M. AND O. A. DOING? COST FINDING AND PRICE PROVING SYSTEMS. REMARKS ON ESTIMATING.

A LECTURE by Mr. H. RAGLAN CALDWELL, before Members of the Printers' Managers and Overseers Association.

AT the February meeting of the Liverpool Centre of the P. M. and O. A., held at the Hanover Hotel, Hanover-street, Liverpool, the president, Mr. Harry Firth, presiding, Messrs. Wm. Stewart and Isaac A. Walton were elected auditors. The suggested programme for the united meeting of the Centres was submitted for confirmation by the members and unanimously approved. The following is a copy of the programme:—

8.0 a.m. Meeting of Stewards and Guides at the Hanover Hotel.
8.10 a.m. Breakfast at the Hanover Hotel for early visitors.
10.45 a.m. Meet at Landing Stage (Cunard tender) for visit to a liner. (Number limited to 50).
1.0 p.m. Official reception.
2.30 p.m. to 5.0 p.m. River cruise on Chartered Ferry Boat, from Landing Stage to Perch Rock Battery and Lighthouse and up the river to Eastham.
6.0 p.m. Tea followed by Social Evening.

The ordinary routine business concluded, the President called up Mr. H. R. Caldwell to give his lecture on "Printers' Prices."

Mr. CALDWELL read a paper including the following:—In looking for a subject I thought that the matter of cost of production, and profit for the employing printer, was one of the most vital to the trade, and to me one of the subjects that I could speak on with authority, having made quite a study of the subject for many years, and from the absurd prices quoted by many printers I am convinced that they are organising expensive equipments, working them at high tension, wearing themselves out in the process and not getting the return that masters receive from other businesses that require the same amount of capital and industry.

If you pick up a trade paper of any kind, you are sure to find an article on costs of some description, and while all of them are written in the same strain and are trying for the same end, one does not always see eye to eye with the writers in some of the details.

The printing trade has been much concerned during the past few years with the question, "What is the matter with the Printing business?" and much good has probably resulted to the craft from the earnest consideration that has been given to the problem by men who have the interest of the trade at heart. New systems for determining the absolute cost of work have been evolved, and these have been installed in many plants throughout the country with considerable success. It has occurred to me, however, that some have been drawn up by theorists or by men at the office end of a printing works who seem to think that the only way to prove whether the prices are right, is by getting printed a lot of forms and gathering together a multitude of statistics which would require the whole time of a clerk if orders were 100 per week and, if those orders only realised £150, that clerks' wages would be a considerable addition to the expenses.

I hope you will find in the remarks I am about to make something that will be of interest to you, and if you are not already working on a cost system I trust the simple scheme I shall outline will arouse your enthusiasm, because I am confident that until every printing office finds out for itself whether their hour charge covers all cost of production we shall never get near a uniform scale of charges, and we shall continue to

Mr. H. R. CALDWELL.

have estimates varying to the extent of 80 per cent., as frequently happens when quotations are asked for.

Mr. R. A. Austen Leigh sums the matter up very nicely in the last Masters' Circular when he says, "We want co-operation in order to get a uniform system of costing, and want a proper knowledge of costs to help us to co-operate and not to cut into each others prices. The first step is to make up our minds not to sell a thing at less than it costs us, and not try to make up for selling things by selling a lot of them." When we have educated the old school to know that composition costs more than 1s. per hour and we have found out what work really costs, then—and not till then—will we know and not guess what to charge per hour.

Why is Printing Poorly Paid?

I think we are all agreed that from the master printer to the "devil" the return each one gets from printing is far too low. The master printer would make much more money if he invested his capital in insurance shares, and himself held a director's position, while the workmen in the trade get less remuneration than bricksetters or painters, so that considering the capital and intelligence required it is impossible to say that printing is highly paid.

Now what is the remedy for this? It means that we need better prices for the product of capital, brains *v.* labour as represented by printing, and I hope to show you, gentlemen, before I have finished what a great deal the members of the P. M. and O. A. can, and ought to do, to stop the practice of doing work at any price rather than let the other fellow have it. This we will only accomplish in one way, and that is by finding out for ourselves and our employers whether we charge enough to cover works costs, or whether the so-called profit put upon the job by the office is really not a profit at all, but simply a percentage put on, that only covers undercharges in the works.

You will say this is an old tale and has been talked about for years by the master printers, and there you are right! It has been TALKED about, and various methods have been adopted to try and stop price cutting, but until recently very little headway has been made. Originally various clubs and associations were formed by masters in most large towns, the main object of which was to prevent the system of large jobs being sent through the trade for estimates until one or other of the firms made a mistake and so got the order. The idea of these clubs was "great," and if they had been properly supported would have served a useful purpose, but most of them came to an untimely end, and what was the cause of the failure? It was because the masters were not faithful to themselves or each other. One or two of these associations had a rule of each member sending all jobs they received for estimate of over £5 in value to a secretary with the price that member had quoted, and the secretary would then send a copy to each member, and it was agreed that all that were asked to quote should send the same price, and so leave the customer to decide which printer should execute the work. In one club I heard of this worked very well until a Bazaar Book was sent round the town. The price was sent in as usual, but one of the masters was not to be relied on, for he offered a donation of £5 if he secured the order for printing the Bazaar Book, and needless to say, he secured the order, but very shortly after the club was disbanded. We hope that matters are now better, and I think we can safely say that the Masters' Federation are

Attempting a Splendid Work,

but still I am afraid the average master is not alive to what can be gained by supporting his brother employer against the common enemy. There has not been that freemasonry among masters that one would like to have seen in this country, and I think we get an object lesson from America in this respect, where they have frequent meetings, congress meets annually, and there is a freedom of speech and exchange of ideas and figures not heard on this side of the Atlantic, and the re-

Digitized by Google

sult is that prices are based on their own and other firms' experience, and because they have adopted a uniform cost finding system, prices have been considerably improved, and I suppose we can take it for granted that the social standing of printerdom has improved also.

Some years ago a small committee from the Federation of Master Printers went to considerable trouble to find a cost system that would adapt itself to printing offices of all descriptions, and they eventually gave publicity to their efforts. Now the amount of time and thought these gentlemen devoted to this work must have been considerable, but I am sure that the reward to the trade has not been in ratio to the amount of labour that was expended at that time, or even in later years by such gentlemen as Mr. Howard Hazell, Mr. Wm. Turner, and Mr. Baird. And that is what I want to draw your attention to. *It is the Masters' Federation Council and a few stalwarts who are giving thought to the printing trade and not to the rank and file of Master Printers.* I don't think that more than 50 per cent. of the employing printers of Great Britain with over £2,000 capital are members of the Federation, and if we only get about 10 per cent. of the members who follow up the recommendations of the Council, you will see how small a proportion of Master Printers are really showing that interest in their own welfare that one would expect from an intelligent body of employers.

Necessity of a Cost System.

Now a cost system is almost as necessary for the up-to-date printing office as the power to drive the machinery. It is all right to let the going rate or market price control one to some extent, but there are innumerable instances where the actual knowledge in connection with the cost of a particular job is of inestimable value, so much so that it often means the difference between profit and loss.

The master printers have returned to the attack again, and, in a report issued about three months ago, recommend the adoption of a uniform costing system as the only remedy for unremunerative prices. I see also that they are to have a conference in London, and the good work done by the mere coming together of employers who have perhaps never spoken to one another before, in establishing confidences in each other, should be an immense help to the smooth working of such a scheme. But one meeting is not enough and will have to be followed by regular meetings in each large printing centre, or I am afraid their labour will be comparatively fruitless unless they get some powerful assistance.

Who is going to give that assistance? I say, gentlemen, that there is nobody more fitted or more capable than the members of the P. M. and O. A., for all successful printers' managers or overseers should know what constitutes cost. We ought to assist them by every means in our power to raise the status of the trade and show that our Association is alive to the danger of price-cutting. We claim to be enthusiastic and that we meet for educational purposes, so let our enthusiasm run into a practical groove, and let us educate our members to the necessity for a cost system. Education in this respect can do no harm and should do much to bring about the desired reform. We have many advantages over the Masters' Federation in that we have a common meeting place at *frequent* intervals, where we can see each other face to face, and consequently are not so suspicious of our fellow members. Then the social distinction is not so extreme. Also the peculiar difficulties and anxieties of a printing office so absorb the masters' attention that they have no time for investigation, and we who are more conversant with the actual production are perhaps in a better position to notice the small things that add to the cost of production.

Many of you may say you are not able to put a system into practice because your plant is too small or you have no time. These excuses will not hold water if you are really in earnest, because no business is too small and the time taken after the initial plunge is so little that only those afraid of the results would shirk the trouble, whilst you have the satisfaction of knowing whether your prices are right, and we are told that "an ounce of fact is worth a ton of argument." You may not all be in a position to do what you would like in this direction, but I certainly think you ought to be prepared, so that if you get the opportunity you know how to go about it.

What System to Adopt

is the question that now arises, and after reading most of them that have been published I don't think we can do better than take the one embodied in the report of the Masters' Federation. It is almost identical with that recommended by the Cost Congress in America some time back, and while the first impression is, that it is rather elaborate, you will be surprised if you go into the subject deeply and give it a fair trial how simple it really becomes.

The system which has been carefully considered by the Masters' Federation is given in the following recommendations:—

Item 1. That the standard unit of the production of printing shall be the hour.

„ 2. That the unit shall comprise the whole cost, *i.e.*, Direct Departmental Costs (which include labour) and proportion of Overhead Expenses,

Personally I do not consider that it is the best way to add the proportion of Overhead Expenses to Departmental Costs and call that the hour cost. I contend that the Overhead Expenses should be charged at a percentage on Works Costs and added as a separate charge, because after all they are really the charge for another department, *i.e.*, Office, which cannot be run by the hour cost, but the labour and expenses incurred has just as much right to be made a charge for as actual production of goods. Now if you make the charge for Overhead Expenses a separate item you are able—if you keep a record of them—to tell whether the percentage you are putting on works cost does actually cover your Establishment Charges or whether it is like many works charges are—mere guesswork. My argument is this,

Make the Office a Department

and put all Establishment Charges against it, and treat it as you would any other department and see whether your charges are sufficient to cover your expenses. Another reason is if you take the actual non-chargeable time on individual orders, you will find that they are not in proportion to the size of the job, as a small order of 10s. or even less requires just the same amount of bookkeeping, and often as much attention from travellers as a £10 order, and as these are large items in the overhead expenses, you will see that if you lump the proportion of establishment expenses to the works hour cost on a large order, you are charging more than is your actual cost for this unproductive work, whereas, if these are kept separate, you can charge these expenses on a sliding scale—more in proportion to the actual cost, and yet be quite satisfied that each job is bearing its fair share of Establishment Expenses. Another point is in the event of a particular department showing a loss at the end of say, twelve months, you are not able to tell with any degree of certainty whether the expenses of that department are heavier than they ought to be, or whether it is caused by excessive Overhead Expenses.

Item 3. That the method of apportioning the cost shall be, first to charge each department with all items that strictly belong to it, and then to distribute the Overhead Expenses *pro rata* on the basis of the Direct Departmental Cost.

My remarks on the last item of course apply to this one, and that is keeping Establishment Expenses a separate item for Works Expenses.

Item 4. That a minimum of 10 per cent. be added to the price of all material to cover the cost of handling and other expenses with it.

To this I would suggest that a further 10 per cent. be added to the price of paper, for all jobs that take less than a ream, if out of your own stock. If you did not stock that paper, the dealer would charge you an extra 10 per cent. for breaking the ream, so you have no right to let your customer have goods at better terms than the papermaker would give you.

Depreciation.

Item 5. That for the purpose of cost-finding the regular rate of depreciation on all plant (plus annual additions) including type, machinery and fixtures, etc., be taken at 10 per cent. on the diminishing value.

The American system recommends 10 per cent. on the PURCHASE PRICE of everything except type and TWENTY-FIVE PER CENT. on the original cost of type. This must be a very heavy tax on the cost of production, and no doubt many of you will smile when you think of the years some of your type and machinery has been in use, and wonder what has become of the amount written off each year as depreciation. It has probably been taken by the firm instead of the profit that should have accrued.

Item 6. That interest at the rate of 5 per cent. on the capital employed be considered a cost.

„ 7. That Ink be charged on weight as a special item and not included in the unit cost of machine work.

„ 8. That in each printing centre a cost finding branch of the Federation be formed to which results should be forwarded (under numbers for secrecy) and that standard rates for various operations be fixed for the district.

„ 9. Having ascertained the cost, the master printer must bring into account the difficulties and risks of the trade and add a substantial amount for profit.

You see, even the Federation think it necessary to impress upon masters that they must add profit, and the Americans say not less than 25 per cent. on cost should be added.

These then are the recommendations of the Master Printers' Federation Council, and if you have read the report of the American Congress you will see that there is very little alteration from what is known as the Uniform Cost finding system of America, and I think you will agree with me the adoption of a system based upon these principles should go a long way to stop the price cutting that is rampant in the printing trade to-day.

You are not bound to "go the whole hog" and I want to tempt you to make an effort, because after you have started you will want to go further. There are

Three Chief Factors

in this system, and so long as you get these you will soon find whether your works charges are really covering cost.

First, you must divide your business into departments.

Second, treat each department as a business by itself and charge all direct departmental expenses against it, over a period.

Third. Credit each department with the amount charged to the customer as works costs during the same period.

This forms a very simple system, and while it is not carried out quite the same way as the one recommended by the Masters' Federation,

it is based on their foundation and only differs in detail, but has the advantage of only requiring three books and a work ticket, while that recommended by the Federation is a Cost *finding* system. I assume that all printers have an hour charge at present, and this simple method will go to prove whether that hour charge is correct.

The dividing of the business into departments is not a difficult matter, and a book we will call the work book should be made that will take all orders for a year and ruled with columns for each department. They would read, composing, mechanical composition (if you have more than one typesetting machine), stereo, machine, ink, litho, ink, ruling, and then have two columns for binding, headed labour and material, and also a column for outside charges, and if you wish your system to cover the paper warehouse and overhead expenses, this is quite possible by having additional columns. Next you must have a book to enter all expenses in, and the columns must correspond with the work book except that you omit the columns for ink and binding material, and these purchases are kept in a third book called Stock Book, so that if you add the amount charged to customers and deduct the total from purchases, this should always tally with stock at the year end, and thus you are in a position to know whether you have charged your customers enough or otherwise.

Three Books and a Work Ticket.

These are the three books I mentioned a few minutes since, and with the work ticket made up in duplicate books you save time in entering. An order comes in, and a work ticket is immediately made out, and the duplicate copy left becomes the day book, thus saving two entries. This work ticket, which ought to have all available instructions on it, then enters the works and travels with the job through every department, and all time and material used is entered on that ticket by the workpeople, and finally the ticket reaches the forwarding department with all time and material entered on it. It is then returned to the overseer, and he fills in the *cash* charge from the particulars on the ticket. This is one of the things that I think ought to be always done by the works overseer, and not charged by clerks, who perhaps only work to rule of thumb. For instance, the work ticket might show two hours for the comp, but if he had received standing matter worth four hours the charge should be for six and not two as would most likely occur if left to clerks, because the type and material has been standing idle and not earning the interest on capital or the depreciation which will be charged against it, so that the customer should pay. Then in the machine-room a crown sheet might be worked on a double royal machine, and you ought not to charge your customer the same hour rate as for a double demy sheet, and again in the binding three hours for a girl might mean a girl at 4s. a week or one at 14s., and if this kind of work is left to a man who does not know the details of production I can easily understand how charges are not always in keeping with the work produced.

The cash value (*i.e.*, works costs) having been put upon the work ticket, these prices are then transferred to the work book, and thus a record of charges made for works cost is kept, and is the amount each department is credited with. The ticket then leaves the works, and establishment expenses and profit are put on to get the charge to the customer.

Now, gentlemen, if all these amounts put upon the ticket are covering the cost of the special item they are supposed to do, the amount put down for profit would be real profit, and as we are told by the American Congress that a minimum of 25 per cent. should be put on all costs, every master printer should be making

A Profit of at Least 20 per cent. of His Total Sales.

Are they? I doubt it, for I feel sure there are not many Liverpool masters paying income-tax on one-fifth of their turnover.

You have seen how I credit each department with the amount put upon work tickets, and now, of course, we must look at the expenses of each department. The allocating of Direct Departmental Expenses is to be recorded in the expenses book, and I suggest you make a return every three months. This I think is better than each month, because you are apt to get actual charges of such items as gas and electricity instead of going on the previous year's figures, and thus you get a truer return of expenses, as these items do not appear monthly, and others may be special ones which if spread over THREE is much better than putting them against ONE month's expenses.

The chief item is *wages*, and presents no difficulties as to how to charge the amount to various departments. It will be necessary to divide readers, pressman, store-keeper and composing-room foreman between hand and machine composition according to the amount of service rendered to each department. The wages of the works overseer is divided between all works departments, and all wages not incurred in the works are put into Establishment Expenses, unless you run the paper warehouse as a separate department, and then stockkeepers' and porters' wages are put against that department. The *Rent* should be allocated by number of square feet of floor space occupied by each, and *Rates and Taxes* based on the rent. *Light*, according to the number of gas jets or candle-power of electric light used in each department. *Power*. If electricity, divide in proportion to the total horse-power in each department if you have no meter. This may not be quite true as a larger motor than is necessary is sometimes installed to allow for increase, and also some motors only run at short intervals, but a fair average can be decided on by the horse-power. *Heating* can be charged on the number of persons in each department or by the cubic space. *Insurance*—fire is dividend on the valuation of the plant and workmen's compensation in ratio to the wages paid while health is treated as part of wages. *Depreciation* at the rate of 10 per cent. per annum, and *interest* on the capital invested at 5 per cent. per annum should be charged each quarter, but based on the plant valuation on the first day of your financial year. All other Direct Departmental Expenses are charged against their various departments and small additions to plant if under £1 in value are also treated as expenses. All charges that cannot be allocated to Departments must go to Overhead Expenses, and include bad debts, commissions, advertising, petty cash, carriage, etc.

What the Hourly Rate Reveals.

Having made all the various charges against each department and also credited each with the value of work charged to customers as works cost you have only to total them up, and if the hourly rates are absolutely correct, and the works have been fully running, there should be no balance on either side of the account. This will rarely happen, and this departmental account will show whether the hourly rates charged on tickets are sufficient to cover all the expenses of running the department. If not, the hourly rate must be increased or the leakages found out so that eventually this account nearly balances.

If by chance you are able to show a profit on any department—well and good—go on and leave your prices alone for you are in Prosperity-street, but if otherwise it is up to you to find a remedy.

The chief recommendation for the scheme I have briefly outlined is its simplicity. It is really only an analysis of work done, and does not require a cost clerk, yet it should serve its purpose. If you are not satisfied with the results (and I never heard of a man yet who put in a cost system who could possibly believe the figures before his eyes), then by all means go further and adopt the whole of the Federation recommendations, the chief of which is the daily time docket to be filled in by the workpeople. These are in vogue in many offices that produce large quantities of printing, and are really the best means of finding leakages, but they present one or two difficulties, especially with small work, and if insisted upon in a small jobbing business would be a source of trouble to collect and check and might become so expensive that it would be a case of costing gone mad. The daily time docket does not always give a true record of a man's doings during a day, for if he has handled several jobs during that day he usually puts down the time he ought to have taken and fills up with clearing, oiling or washing up, so that much of their value is lost. However, on larger work, dodging of this kind would soon be detected, and if these dockets are kept in a proper manner you are able to keep a record of the number of hours you can charge and those which are called non-chargeable. It will show the percentage of clearing, time lost re-setting, alterations, corrections on Lino machines (and these latter are a very expensive item when they are only found in the press-room). Then if you care to count the number of ens set on typesetting machines for a period of, say, a month, and divide by the number of hours, you will get the number produced per hour, which is what you want, and not the fancy figures often quoted by the machine manufacturer. It will also show you how many hours machines are running, how much time spent on making-ready, and also the time lost through waiting or standing through lack of work, and when all these figures are gathered together you will find

The Actual Production Per Hour

per man or machine is very low and not quite what we would estimate if asked the question before we had taken these statistics, and if you go into every detail and divide small and large machines you will probably find the investment on the larger presses make these less profitable than the smaller ones, because the charges are not always in ratio to the capital outlay, power and increased running charges.

I fancy I can hear you saying, "Why, we won't be able to do any work." Nothing of the kind! It will take time and labour, but not more than it is worth. Records and statistics up to a point are necessary to every business, so why should the time be denied? To carry out a price proving system, to make a statement every three months, to allow for depreciation, to be able to pay the bills when they are due—all this means that master printers, managers and overseers must get together through their organisations and adopt prices that will pay. The idea of doing work for any price rather than let the other man have it ought to be stopped, but all those who have studied the subject know that it will not end until the heads of the trade have found out what it *costs* to produce printing, and even then you must not be like the printer who told a prospective customer that he had installed an efficiency system and could therefore quote him a much lower price than any other firm in the town. You may know your costs accurately, but if you don't pass them on "plus" to your customers—well, you must be a philanthropist. A cost system is not a cure for all ills, but when a prospective customer tells you that the man down the street will do the job for 20 per cent. less you know that the other fellow does not know his cost, or the prospective customer is not telling the truth.

So then let us find out whether our prices are covering cost and if we weed out those jobs that do not pay, we shall probably do less work, but there is no doubt that ere long we shall be making more profit and if the other fellow wants to take work at ruinous prices - let him—give him sufficient rope and sooner or later—the pity is, it is often later—he will hang himself.

One of the things closely related to the cost question is estimating, and I look upon it as one of the most important duties in a printing office. You come across such strange experiences in this connection that no wonder the people asking for prices think that some printers are making fabulous fortunes.

Estimating

is not an easy matter, and we are apt to lose sight of several points which I think the keeping of a cost system would bring home to us better than anything else, because then we should know, not guess the cost of production. One of these pitfalls is giving the advantage of up-to-date expensive machinery to the customer instead of reaping an extra profit. In fact we frequently make less profit owing to the lower cost of production. Let me explain. A job comes to be estimated for, that would take a comp 20 hours to set and if your hour cost is 1s. 6d., 30s. would be your works charge and you put your percentage for overhead expenses and profit on that, but now you have installed a typesetting machine and you will be able to set the job in 4 hours machine and 6 hours hand, so that if your machine rate is 3s. the total works cost is only 21s., and yet only the same percentage is put on. Do you see my point? By marking down your cost, you also cut down the profit which is based on cost and you not only give the customer the benefit in reduction of cost, but you also reduce the profit you would have made had you secured the order before you installed this expensive machine.

The same thing applies in the press-room. Machines do not cost the same amount and all are not suitable for certain classes of work, yet, if a job is for estimate you quote to do it on the machine most suitable at the lowest possible price, and if by chance you cannot do it on that particular machine, when the order comes in, your hour cost is wrong, and indirectly you have suffered because of having an up-to-date machine. In this respect I think a standard should be drawn up for certain sizes of paper at price per 1,000 sheets, plus making ready—the hour cost of making ready to be the same as the 1,000 sheets price. This price should be sufficiently high to cover printing, say a double-crown sheet on a double-royal machine, because it is not always convenient to wait until a double-crown machine is

vacant, and it might happen that your larger machines required a job, but if the price quoted only covered the smaller press you would be reluctant to use the more expensive one, so that allowances must always be made when quoting for machine work.

We are apt to estimate the time that certain jobs would take to produce by our own ability. We ourselves could probably do the job in the time we estimate, but seldom does the average workman get through in the time allowed, so we must be careful to estimate the time of the ordinary man, not the smartest man of our staff.

Finally do not be too modest when estimating, and take care to cover yourself for unforeseen circumstances as is done in all other trades, and if you secure less orders don't worry, for you make more profit, and bear in mind, the office which secures more than 30 per cent. of jobs that are offered is on the highway to the Bankruptcy Court.

DISCUSSION.

A long discussion ensued, in which members who had kept a cost system were quite in accord with the lecturer, and thought that the members of the P.M. and O.A. would do all they could to urge masters to install a cost system, although what was the use of this, it was argued, if, when they knew exactly what their hour cost was, a traveller would come and say, "We want to cut in very low with this job," and when you told him it will be so much, he immediately takes it to the master, who brings it back, and says he can never get that price. Travellers who work on commission were one of the chief factors against better prices, and the pity was that employers who would not believe what was cost were frequently talked into allowing estimates to be sent in that practical people know would only cover *works* costs. This was all right for the traveller, but not good for the business. It was generally admitted that masters were continually complaining about low profits, and the speakers knew it was quite true, but the average master was more anxious to rob someone else of a job than make a profit for himself.

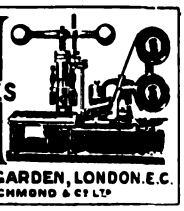
Mr. DAVY said the first thing to do was to educate the customer, who had no idea of the expense incurred or how printing was produced, and he was sorry to say that both master and clerk were apt to side with the customer if he complained that the charges were too high.

Mr. WALTON said that the masters themselves were to blame for the prices ruling. He was afraid the Masters' Association was only a myth in Liverpool, and matters such as this were never discussed by them. If they did not find out for themselves what printing cost, it was they who wanted educating, and not the customers. A cost system was very necessary, and the simple scheme Mr. Caldwell had put before them that night should appeal to master printers if they really wanted to increase their profit.

Mr. POOLE contended that the printers in back streets and out of the city would always have an advantage over the bigger and more pretentious firms, and he thought the best way was to have a standard price list for all operations, so that if the time estimates were right the prices quoted would not differ very much. He knew of one job that was being done for £6 that cost the previous printer £10 to set, and wondered whether that firm really knew the hour cost, or was it a case of clerks estimating. He thought 25 per cent. was too little to put on for profit, considering the risks and expensive equipment.

Mr. HANNAH said he had had experience of the so-called daily time docket, but he thought a better name would be the daily "liar." A cost system was very necessary, but if, when you had found your hour cost, the masters would not stick to the prices, the labour was thrown away.

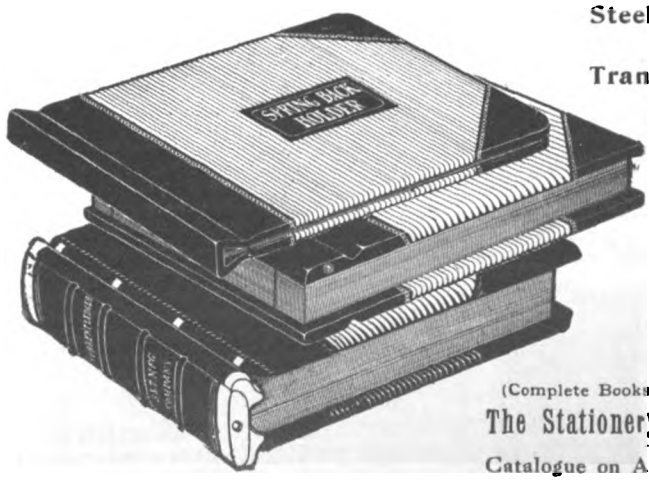
Mr. BURNS thought it a little unfair that a firm with better facilities should be expected to keep up their prices so as not to be lower than that of another printer, as enterprise would not receive its true reward.



Mr. FIRTH then remarked how necessary it was that printers should see that all small items should be charged up against a job and so be sure that the final charge would show a real profit.

Mr. CALDWELL, in replying, said that all the arguments raised only went to show that the cry of poor prices was general throughout the trade. The position of the printers' overseer was not a bed of roses. He was "pulled over the coals" if there was little or no profit, and if he ventures to tell the master that the charges are not high enough, is told that they cannot get more and the works must be kept going. He thought more profit would be made if the works did less, if only jobs were figured on proper cost prices, and not based on a price that was just below some other firm. It was impossible to educate the public, and the better way was to educate the masters, as they should be like brothers to each other. But the difficulty was that masters could not be persuaded to adopt a cost finding system and go into details themselves, take the advice of the people who really know, or even discuss the matter among themselves; and consequently not knowing what was actual cost were not firm enough to refuse a job rather than come down in price. The standard price was a fine thing in theory, but if one was fixed, half the masters would not believe it was right, and consequently they would not stick to it as rigidly as if they found it out for themselves. Then again, the expenses of some offices may be so high that the standard rate might not cover cost in that particular office, and the reverse would be the case where an office was equipped with special facilities for certain kinds of work. As the idea was not to stop legitimate competition and enterprise, it was much better that printers should go to the trouble of finding their own cost, and then perhaps there would be some hope of them being firm. There should be a spirit of "live and let live" among printers, but it was a case of "don't let the other fellow print the job, even if we lose on it." The Council of the Masters' Federation were making a big effort to stop this kind of thing, but unfortunately the members did not respond, and there was lack of enthusiasm. Members of the P. M. and O. A. were in 75 per cent. of the offices in England, and could exert a powerful influence by determining what their workshop costs were, and he hoped they would urge upon their employers the necessity of knowing what it cost, and to give the cost finding system a fair trial.

A hearty vote of thanks to the lecturer was moved by Mr. STEWART and supported by Messrs. DAVY and CONWAY. Each remarked how thoroughly Mr. Caldwell had gone into the subject, and suggested that the paper should be reprinted in full and circulated throughout the trade as a strong argument in favour of a cost system, a simple scheme that would not entail a lot of clerical work, but sufficient to show whether each firm was covering cost, and a stepping-stone to the more elaborate arrangement of the Master Printers' Federation.



THE ONLY WAY.—The right price to charge for a job of printing is one that will leave a profit over and above all cost, including stock, labour, depreciation, spoilage, advertising, insurance, power, light, fuel, rent, taxes and the thousand and one other items of expense the printer is called upon to pay. Rule-of-thumb methods, second sight, mind reading, telepathy and similar methods will not give that cost. It requires a well planned and operated cost system to do it; and the quicker a printer installs that, the better he will succeed.—*Buckeye Printerdom.*

ONE of the most artistic and chaste-looking dinner programmes that we have seen is to hand from the Griffith-Stillings Press, of Boston, Mass., U.S.A. It is got up in quite a novel manner, the covers of white cartridge holding a six-page inset of heavy Japanese paper to which is attached the panels, on thin paper, bearing the programme, these being very delicately printed in black and red. The programme was that used at the annual banquet of the Griffith-Stillings Press Benefit Association, and was got up by the employees of the firm in their own time. The job is worthy of all praise and is a credit to all concerned in its production.

A Hint re

Deferred Valuation Orders.

I have definite order for, or intimation of, valuations (of printing or newspaper or studio or foundry plant) to be placed in my hands in the autumn, and even a year from date.

It becomes increasingly convenient and even necessary to fix up such arrangements many months ahead. Will printers therefore not refrain from communicating on the point merely because they may not want the valuation to be done at once,

F. COLEBROOK,

Printers' and Newspaper Valuer,

146, FLEET STREET, E.C.

The Deal Home Musical Society.

This newly formed society held its first concert at the "Falcon Hotel," Gough-square, last Friday, a large number of persons being present. This society is inaugurated to aid the funds of the Lloyd Memorial (Caxton) Seaside Home, Deal, Kent, an Institution which is doing an immense amount of good amongst all sections of the printing trades In this historic hostelry, Oliver Goldsmith and Dr. Johnson used to meet. Here, too, in later years, the generous-hearted William Crespin foregathered with his colleagues, Tom Scott and Fred Apps, and initiated the now famous Auxiliary movement, whilst quite a host of honoured names connected with printerdom have been associated with this time-honoured rendezvous of printers. It is a happy augury full of promise that the Deal Home Musical Society made its *debut* at such a place, and it may mean that the prosperity that followed the labours of Crespin, Scott and Apps will again accompany those whose efforts are exerted for such a noble cause. It was really pathetic to hear the chairman, himself blind, pleading so eloquently for the suffering ones and the poor factory girl, and a grander object lesson it would be difficult to find.

The two gentlemen occupying the chairs, although widely known in their respective spheres, are worthy of special mention. Mr. F. E. Giles started his career as a master printer, but had the misfortune some 17 years ago to lose his sight through a shock when travelling in a railway train. He was then in the employment of Messrs. B. Winstone and Sons, in which firm he has been in continuous employment for over 30 years. His services were so much appreciated at the time that Messrs. Winstone and Sons decided he should be escorted by one of their representatives over a radius of 40 miles from Shoe-lane, so as to enable Mr. Giles to be in his own home every night. It is much to his firm's credit to be able to chronicle the fact that this representative (Mr. Ralph Manuel), has been in their employ for even a longer period than Mr. Giles himself. Despite his sad affliction, Mr. Giles continues to take great interest in all philanthropic movements connected with the trade, whilst his charming personality has endeared him to a very large circle of friends in the printing fraternity.

Mr. T. J. Lewis.

Mr. T. J. Lewis, the proprietor of the "Falcon" Hotel, is a well-known athlete, and naturally attracts those of an athletic turn of mind, thus it is not surprising to find that the North of the Thames Cross-Country Athletic Association, the Hampstead Harriers, the Finchley Harriers, or the Printing and Allied Trades Charity Sports' Association, hold gatherings at their esteemed *confrères* house. In addition to Mr. Lewis being the N.C.U. champion for Berks, Oxon, and South Bucks during 1893 and 1894, and also for Guildford and Ripley from 1892 to 1894, he was a well-known member of the Bucks Yeomanry. Mr. Lewis is a mine of information on all form of sports, and is a great help to clubs and to secretaries in their work. He is as genial as he is generous, and those that know him thoroughly are just those who respect him most, whilst his quiet gentlemanly ways win and command universal respect.

Amongst those present were Messrs. Wm. Brett Plummer (Swain and Co.), H. Heasman (Shackells), E. T. Newton, T. A. Newnham (chairman of the Deal Home), H. Coombes, A. W. Paul, F. Shaw, T. Harrison, H. W. Howes, W. Wordham, A. Ritchie, J. Mulligan, S. A. Robins, G. Loveland, R. Manuel, W. H. Geard, J. L. Camp, and Arthur W. Paul.

The Secretary of the Home, Mr. H. F. Parker, well known as the hon. general secretary of the Printing and Allied Trades' Charity Sports Association, read an interesting letter from the Matron of the Home. In thanking the chairman, Miss L. M. Gray said she felt sure that they would feel well paid for what they were doing if they could see some of those who came to the Home, not only weak and ill, but feeling that the world was a very hard place. Her staff assisted her in making these sad souls see that not only was the world not quite so hard, but that kind-hearted men could be found who were willing to sacrifice both time and money in a cause devised for their special benefit. The Secretary stated that the National Health Insurance Commissioners had sanctioned their making special arrangements with approved societies whereby single persons could reap the full benefits of the Act—a point that secretaries of sick and benefit societies should note. He was also pleased to say that Mr. R. D. Blumenfeld, on behalf of his firm, had generously headed a subscription list with a gift of 50 guineas, and it was confidently believed that the employees would subscribe the remaining sum required in time to name a *Daily Express* bed during the coming summer months. Mr. Parker said that about 30 men and women—all convalescents engaged in the printing and allied trades—were at present in the Home. Such facts, he thought, could be well left to speak for themselves. Funds were urgently needed to maintain the 61 beds in the Home, all of which would be shortly occupied. His committee wanted it to be a a printers' Institution, as far as was possible, and the best way of carrying out so laudabie a desire was for every firm to become interested in the work. He was ready at all times to address any chapel, or other gathering, and to explain the objects and scope of their work. He also wished everyone to know that they did not want to divide any subscription at present given to their sister charity—the Limpsfield Home. That Institute was most useful to the trade, and they could all wish it God speed and prosperity. The Secretary concluded in calling upon Mr. F. E. Giles for a few remarks.

Mr. F. E. Giles.

Mr. F. E. Giles, in a really eloquent speech pleaded for the co-operation of all earnest workers interested in trade charities to assist them in making the objects of the Home more widely known. He was speaking to a large employer a few days ago, and he was surprised to learn that such an Institution existed. He could see the great advantages it offered to the female portion of his employees, and he felt sure that they would avail themselves of such an admirable Home. It was just the one thing which was lacking in their charitable undertakings—a place for the sick or weak female employee. Mr. Giles thought that nothing better could be devised than the plan of getting their workpeople fit, and of keeping them well and strong. What more charitable act could one do than to give a poor girl three weeks free stay at this beautiful seaside resort, and pay her railway fare into the bargain. He had travelled all over the United Kingdom, and from Newcastle to Penzance no better air could be found than at the delightful old-fashioned town of Deal. The air was peculiarly bracing and invigorating, and it could not fail to help those numerous nervous breakdowns that the rush and tear of modern machinery had been so productive in bringing about. The City Police rented a complete wing at the Home, which in no way affected the comfort or the accommodation of the ordinary patients. They could all feel glad that their beautiful Home—it had been described to him as being equal to a first-rate hotel—was of some use to such a grand body of men as the City Police. Personally he was greatly indebted to them, and he was sorry that Chief Supt. Stark—who was a member of the Deal Home Committee—could not be present so that he could have thanked the City Police through his agency. It was a testimonial to any institution that such a fine body of men had selected it as their Home, for they all knew how particular the "Force" was in such matters. Mr. Giles concluded with a most eloquent appeal to his hearers to work for this glorious trade charity.

Mr. H. F. Parker, in a few sentences, proposed the health of the Chairmen, which was most enthusiastically received and accompanied with musical honours.

Mr. T. J. Lewis, in reply, said that he felt it a duty to do his utmost for the printers' charities. He never met with a more charitably disposed body of men than the printers were, and it was a real pleasure to assist them in the many methods they selected to give effect to this grand trait of human character. As Mr. Giles had said all that was really necessary he would not delay them further than to thank them most sincerely on behalf of himself and his co-chairman for the very kind manner in which they had received the toast.

The Secretary, in announcing the "plate," said that they were truly grateful to the Chairmen, whose efforts had resulted in the handsome sum of £19. He was informed that it would eventually be increased to over £20.

Mr. F. E. Giles said that he should like to thank Mr. W. A. Fricker and Mr. W. J. Mould, the hon. secs. of the Musical Society, for having provided them with such an excellent programme. Their best thanks were also due to the artistes who had so kindly given their services.

Mr. W. A. Fricker, in reply, said it was a great pleasure for him and Mr. Mould to be able to assist in making the concerts the success which this one had proved to be. He trusted that everyone present would be at their next concert on Friday, February 28th. He thanked them one and all for their attendance and support, and was obliged for the kind words that had been said about himself and Mr. Mould.

Mr. W. J. Mould said that both he and his co-secretary would undertake to maintain the quality of the concert which they had provided on this occasion, and he appealed to them to help them to carry on the work and thus enable the Committee to increase the benefits of their magnificent Home from Home at Deal.

The following is a brief outline of the concert:—Mr. A. H. Cooke is a most efficient accompanist, and his playing greatly contributed to the success of the singers. Mr. Lionel James sang "Drake is going West" and "Tommy Lad," Harry Piper contributed two humorous turns, Mr. F. C. Pratt gave "Down in the Deep," Mr. B. T. Davies, accompanied by Mr. Bruce Andrews, scored in "My Dreams," Mr. Bruce Andrews also sang "The Floral Dance" most effectively. Mr. Harry Roberts (a great favourite at printers' concerts) sang "I tried to keep from laughing" with immense success. Mr. Dick Lewis (Ilford) contributed a couple of monologues in his usual inimitable style, and Mr. S. A. Robins sang "Rose of my Heart" and "Marie, my girl" with effect. Mr. Wm. Brett Plummer is well-known to trade concert goers, and his singing of "I've got the time I've got the place" and of "Gee—I wish that I had a girl" met with great applause. Messrs. King and Jack are very amusing in their comedy songs and cross-talk, and met with a good reception. The Norlen Concert Party, Messrs. B. Davies, D. Davies, Norman Browne and Bruce Andrews, was a great success, and their quartettes, "Mulligan Musketeers," "The Catastrophe" and "Farewell," were excellent. Master George Lewis has a pretty soprano voice and that was heard effectively in his two songs, "May Morning" and "Sweet Vale of Avoca." Mr. J. L. Camp gave a dramatic reading of the "Correct Card," that proved him to be an artiste of sterling merit. Altogether an exceedingly pleasant evening was spent, which must have been encouraging to the promoters.

THE Insurance Commissioners, under the powers conferred on them by Section 66 of the National Insurance Act, have submitted to the High Court the question whether lithographic artists, process workers and engravers are employed by way of manual labour within the meaning of Part II. (g) of the First Schedule to the Act, and it is anticipated that the Court will deal with the question at an early date.

THE PIONEER WEEKLY PRINTING TRADES JOURNAL.

Important Notification to

Printers' Engineers and Brokers, Typefounders, Stereotypers' Foundry and Matrix Furnishers, Engravers, Bookbinders' Furnishers, Papermakers, Wholesale Stationers, Dealers in Stationers' Sundries, and Manufacturers for the Export Trade generally.

There is an Immense market for British Productions in the above Trades throughout INDIA, AUSTRALIA, AFRICA, CANADA, etc.

YOU have to SELL What the COLONISTS want to BUY.

WHAT IS THE MOST EFFICIENT MEANS FOR INTRODUCING YOUR GOODS TO THEM?

Undoubtedly the publicity of an OLD ESTABLISHED and WIDELY CIRCULATED Trade Journal.

WITH THIS FACT IN VIEW THE PUBLISHERS OF THE

British and Colonial Printer and Stationer

(Established 1878.)

Propose to issue, early in March next, another

SPECIAL EXPORT NUMBER

for Circulation in India, Canada, South Africa, Australasia and British connections throughout the

ENGLISH SPEAKING WORLD.

A SPECIAL FEATURE OF THESE NUMBERS IS

THE BUYERS GUIDE An Up-to-Date, Selected, and Comprehensive List for Colonial and Foreign Buyers. **TO THE EXPORT HOUSES**

In deference to the wishes of a number of our Advertisers, who consider that the utility of these Special Issues will be thereby increased, arrangements have been made to give them a large

HOME CIRCULATION ALSO.

ADVERTISERS WILL PLEASE NOTE

that in future our Special Numbers will be entirely separate and distinct from the ordinary weekly issues, an arrangement which will permit of more time and attention being given to their preparation and contents.

The very extensive advertising support accorded to these special issues of the British and Colonial Printer and Stationer for many years past, by firms catering for the printing and allied trades, furnishes sufficient evidence of their value from an advertiser's point of view.

It is not intended at present to make any increase in the ordinary rates for advertisements, so far as the special numbers are concerned, and in this connection it may be pointed out that with the adoption of our new size and style at the commencement of this year the charges for advertising were greatly reduced. A copy of our new advertisement scale will be sent on application, together with a pamphlet containing 170 testimonies from readers, advertisers, and the Press, to the value and utility of the journal.

Advertisements Should be sent in **PROMPTLY, AND** For considerations of Display and Fine Printing **THE** SOONER BETTER

BUT MUST REACH US NOT LATER THAN FEBRUARY 28th.

Publishers and Proprietors:

STONHILL & GILLIS, 58, Shoe Lane, LONDON, E.C.

Trade Notes.

THE *Church Times*, having attained to 50 years of existence, has celebrated its jubilee, and has issued an interesting supplement which it publishes in the form of a retrospective survey of its 50 years' work.

ACCORDING to *Kemp's Mercantile Gazette* there were no failures in the printing and stationery trades of England and Wales for the week ending Friday, February 7th; the corresponding week in 1912 showed but one.

THE Library Association has arranged for Mr. R. A. Peddie to deliver a course of six lectures on bibliographical research on Saturday afternoons, beginning on February 8th, at 3 p.m. in the Lecture Room of the British Museum. Admission is free, without tickets.

THERE passed away on Sunday last, at the age of sixty-five, Mr. George Stephenson, newsagent and postmaster, Gosforth, near Newcastle. Mr. Stephenson commenced business as a newsagent in Gosforth in 1870. He was appointed sub-postmaster shortly afterwards, and held the position up till his demise.

TENDERS are wanted for printing, stationery, and account and other bookbinding for three years for the Corporation of Norwich. Particulars from Mr. A. H. Miller, Town Clerk, Guildhall, Norwich. Tenders are also wanted by the Holborn Borough Council for the supply of stationery, of which particulars may be had from Mr. L. Walford, Town Clerk, 197, High Holborn, W.C.

IN honour of the attainment of his 70th birthday, the staffs in all departments of the *Lancashire Daily Post*, the *Preston Guardian*, and *Blackburn Times*, and the general printing works at Preston and Blackburn, last week presented to Mr. John Toulmin, J.P., the senior member of the firm of Messrs. Geo. Toulmin and Co., Ltd., a silver salver suitably inscribed, and accompanied by an address signed by the employees.

"THE WAR AGAINST BRIBERY" is the title of a red-covered pamphlet written by Mr. R. M. Leonard and published by the Secret Commissions and Bribery Prevention League, Incorporated, with a preface by Sir Edward Fry, G.C.B. It contains a brief history of the legislation on the subject of secret commissions, and of the work of the League formed to enforce that legislation and abate the evil, in which work Mr. Leonard has had a large share.

MR. HERBERT W. JORDAN, managing director of Messrs. Jordan and Sons, Ltd., gave a lecture on Company Promotion and Flotation, on Tuesday, under the auspices of the Secretaries' Association, at Winchester House, E.C. The subject is of wide interest and the lecture has been published in a pamphlet. It deals *inter alia* with the history of companies, their duration and utility, the purpose of formation, "freak companies," and the procedure that has to be gone through in the formation of a limited company.

A NUMBER of type specimen sheets are to hand from Messrs. J. G. Schelter and Giesecke, the well-known Leipzig founders, who have produced a new face which they term "Monos," a bold heavy letter that is suited for jobs requiring strong type or special emphasis. There is a complete series ranging from 12-point to 60-point, and a similar series in a condensed style. The specimen sheets show examples of display in which the types have been used to advantage, both in black and colours. Other two faces of a light character are "Rolando" and "Rolando Script," both of which lend themselves to delicate display.

IN the Chancery Division, last Thursday, an action came before Mr. Justice Neville, in which Messrs. William Stevens, Ltd., claimed an injunction against Messrs. Cassell and Co., Ltd., to prevent the issuing of a magazine or periodical under the name of the *Magazine of Fiction*, or under any other name which was calculated to lead to the belief that the defendants' publication was a publication of the plaintiffs'. After hearing counsel, the Judge said:—"In my opinion the plaintiffs show no title to relief. It is a matter of importance to protect a trader from any unfair attempt to take advantage of the reputation he has acquired for his goods or in his business. But it is equally important to protect his Majesty's subjects in their use of the English language, and the law does not recognise a monopoly of the King's English. Here the plaintiffs claim an exclusive right to the words *Magazine of Fiction*. In my opinion those words are purely descriptive and indicate that the publication contained nothing but fiction, and I defy any better description of it than *Magazine of Fiction*." The action was dismissed with costs.

THE death is reported from Italy of Col. Charles N. Jones, chairman of the Lockwood Trade Journal Co., New York. In his early days he was associated with the American daily press and political work of the States, but lately he had given his attention to trade journalism, and owned several organs associated with the paper trade.

EGYPTIAN TENDERS.—H. M. Consul at Cairo reports that tenders for the supply and delivery of about 160 rolls of green and 40 rolls of red thin art leather binding cloth required during 1913, will be received by the Director, National Printing Department, Cairo, up to 27th February. Copies of the conditions of contract and form of tender, with samples of the cloth may be obtained from Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, S.W. Samples may be seen at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall-street, E.C.

There was a goodly gathering of printers and their friends at the Penge and Beckenham Liberal and Radical Club on Monday last, the occasion being a printers' reunion in aid of the various trade charities. Mr. A. Wilson presided, and was supported by, amongst others, Mr. J. Monk, Mr. C. Sibley, Mr. Arthur O'Connor, Mr. H. Reardon, Mr. Rowley Cowper, etc, and a capital programme was provided under the direction of Mr. C. Cripps. The hon. secretaries, Messrs. W. T. Ridgwell and J. French, together with the committee, have every reason to be proud at the success of their efforts.

WITH the January issue the *Theosophical Path* (the official organ of the Theosophical movement, edited by Katherine Tingley, Point Loma, Cal.) enters upon its fourth volume, its pages full of interest, not alone to the student of Theosophy, but to the general reader. There are splendidly illustrated and charmingly written articles on "The Louvre" and "Genoa." "One of the noblest monuments of Paris, and the one above all others that belongs to the race as well as to France, is the Palace of the Louvre." Of Genoa the superb, Kenneth Morris says: "And, indeed, superb it is, this city of white palaces looking out over the azure sea; this fair imperishable monument to the boundless genius, political, artistic and commercial, of the Latin race." Dr. George Wharton James continues his interesting series, "With the Zunis in New Mexico," telling some of the thrilling experiences which he had among them, and the whole magazine is a splendid production.

THE fifth concert of the season of the City of London Printer's Musical Society auxiliary to the Printers' Pension Corporation was held at Anderton's Hotel, Fleet-street, on Monday, Mr. W. Watts, chairman of the executive, presiding. Supporting the chairman were Alderman Hunt, Mr. C. Creswick, Mr. F. W. Shaw, Mr. A. J. Richie, Mr. E. P. Woodman, Mr. Geo. Tams, and other strenuous workers. The concert was up to the high standard characteristic of these gatherings, and included Miss Marion Battishill, a deep rich contralto vocalist; Miss Nora Freeley, an excellent violinist; Miss Edith Williams, a dainty comedienne; Miss Amy Brook, with comedy songs at the piano and ventriloquism; Mr. Ernest Stepan, a pleasing tenor; while the humorous side was provided by Miss Hilda Hudson and Mr. Dick Lloyd, comedy duets; Mr. Arthur Verne, Mr. Fred Rome, and Mr. Tom Feestal. Mr. C. G. Wood and Mr. T. C. Stokes most capably accompanied the various items. The last concert of the season takes place on Saturday, March 8th, when the members of the committee will preside.

ADVERTISING FIXTURE SHEETS.—A useful list of advertising sheets, giving miniature impressions of them, has been issued by the well-known Leeds printers, Messrs. Taylor Bros. The patterns comprise some very effective and elegant designs, carefully lithographed in suitable and harmonious colouring, and all offered at a low price. Some of the designs are more especially suited for cricket announcements, but they may be used for various other purposes, such as football, cycling, fishing, bowling and swimming clubs, entertainments, local time tables, etc. The general scheme of the designs is a large central panel, with a decorative border or background, surrounding which are numerous smaller panels in a variety of square, circular and oval shapes, to receive advertisements. A number of artistic half-tone pictures, characterising different games and recreations, are separately provided, so that a particular one may be selected by the customer to be printed on the sheet, or the picture space thereon may be ordered to be left blank. Lithographed cards are also supplied of a similar character.

A FINE array of fiction by famous novelists distinguishes the *Windsor Magazine* for February, for here are the latest complete episodes in Halliwell Sutcliffe's new series, "The Open Road," Justus Miles Foreman's strenuous romance of modern life, "The Six Rubies," and the late Robert Barr's sequel to the former adventures of Young Lord Stranleigh. The record of Trader Carson's journeyings in West Africa is also carried a stage further by John Barnett, with another exciting narrative. A delightful tale by that favourite chronicler of child life, Ethel Turner, and other complete stories, grave and gay, by popular authors, all of which are attractively illustrated by leading black-and-white artists, complete a notable fiction programme. The fine-art feature of the issue consists of a collection of reproductions from the pictures of the late Philip Calderon, R.A., of whose work there has hitherto been no collected record in volume form.

DURING January printing type was imported into the United Kingdom to the extent of 5 tons, valued at £753, compared with 1 ton for the corresponding month of last year at £442, and 7 tons for January, 1911, valued at £1,346. The export trade from the United Kingdom for January totalled 48 tons at £7,312, as against 59 tons at £6,367 for January last year, and 36 tons valued at £6,156 for the same month in 1911.

MR. GEORGE ANDREW HUTCHISON, the founder and editor of the *Boy's Own Paper* and other publications, died on Tuesday at Leytonstone of heart decease, at the age of seventy-one. Mr. Hutchison was the author and editor of over 125 volumes, including science, theology, and general literature. He also took a great interest in the work of the Mission to Deep-sea Fishermen, for which he had acted as general editor since 1875.

PAYMENT BEFORE DELIVERY.—In the City of London Court, last week, before Mr. Registrar Wild, the sum of £2 was claimed by the Graphotone Co., Ltd., 34, Paternoster-row, against Messrs. Albert and Brown, stationers, 37, High-street, Hornsey, for picture post cards supplied. For the plaintiffs it was said that the order came from the defendants through a traveller. After the goods were put in hand the defendants wished to have their name imprinted upon them. The defendants were informed that there would be 1s. 6d. extra to pay. These terms were accepted. They had informed the defendants when the post cards were ready, and had stated upon receipt of remittance goods would be forwarded. The post cards had been ready some time, but the defendants had not done anything. The post cards were useless for any other purpose, having the defendants imprint upon them. The defendant, Mr. Albert, said he gave the order to the plaintiffs' traveller upon the understanding that he was to receive the post cards which he was to sell during last summer. After a lapse of time he received a *pro forma* invoice. He had given the order some two or three months before. Although the goods remained upon the plaintiff's premises he was sued for the price of goods he had never had. Had they been delivered to him he could have sold them. He did not think the plaintiffs should have judgment for the price of the goods and also have the goods. The Registrar said it appeared to be a question of the payment of cash before the delivery of the goods. The defendant said he did not mind an order being made against him for payment in a month providing delivery was enforced. The Registrar said the defendant did not appear to deny the position of affairs as alleged by the plaintiffs. There would be judgment for the plaintiffs for the sum claimed, payment to be made in a month. After the defendant had paid the money he would get the goods.

The Scottish Printers' Dispute.

Pending the meeting of the conference on Monday there was but little development in the situation at the week end, beyond the striking of a few of the men as a protest against the lock-out notices that were posted in Edinburgh and Glasgow offices. A mass meeting of the men was held in the Berkeley Hall on Saturday afternoon.

On Monday the conference between representatives of the masters and men was held in the North British Station Hotel, Edinburgh. Mr. W. B. Blaikie, president of the Scottish Alliance, presided, and the employees were represented by Mr. Charles Bowerman, M.P., chairman of the National Federation, and by other officials, as well as officials of the British Typographical Association, the Glasgow Typographical Society, and the Edinburgh Typographical Society.

The conference met again on Tuesday, when it was announced that an agreement had been come to, the particulars of which will not be disclosed until both parties constituents have seen them. The lock-out notices are of course withdrawn.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

On no account miss that Costing Conference of Master Printers to be held at Stationers' Hall on Tuesday and Wednesday, 18th and 19th instant. It begins at 2.30 on Tuesday.

o o o

Laurens Coster, or to give his title more precisely, Laurens the Coster, will preside in spirit.

o o o

The invention of printing may not be due to him; nor even the invention of the tale that the invention of printing was his. Be all that as it may, his name is a good one for this occasion. A "Coster" is one who studies costs; he is our man.

o o o

I understand that Laurens the Coster meant simply Laurens the Custodian. He was a glorified caretaker, or taker of care. He was Churchwarden and treasurer of the Church of St. Bavon, in Haarlem.

o o o

All that printers are now asked to do is to take care. In the old wheeze perhaps pardonable once again, our business presents need for not the slightest scare, but for the greatest care. And once again I will quote Gladstone to his son, "Keep your accounts; and the easiest way to keep them is to keep them carefully."

o o o

He was himself most scrupulously careful and exact in his personal account-keeping through his long life. Even so, he did not wholly escape some financial stress, and once I believe took steps to sell a good many private possessions. It says much for British public life that no Premier, Liberal or Conservative, has accumulated during official life any private fortune worth speaking about.

o o o

I am simply concerned here, however, to note that he did regularly keep his accounts, and also that when unusual financial stress, from whatever cause, came upon him he met it with determination and thoroughness. He met new dangers by new and fitting action.

o o o

That two-fold example is worth pondering. The last especially, perhaps. For undoubtedly a new position has arisen.

o o o

Hours have been shortened. Wages have somewhat, though not greatly, risen. Government and other changes have occasioned new costs. Materials are very much dearer than they were a few years ago. Type particularly was advanced 4d. a pound in two twopenny advances only last autumn. There seems no valid ground for anticipating any appreciable easement in any of these particulars.

o o o

All this means that master printers, who after all are also servants, must ask the public, "the ultimate employer of us all," for more money. Or, at the very least, must cease to suppose that they can make the same net profit from the same gross figures as they lately could.

o o o

At the very least they must get to know just where they are.

o o o

I throw in that word about "the very least," because I want to lead the pessimist gently along. I am an optimist myself. I believe that we not only can ascertain our costs more carefully, but that we can raise prices. I have put this to the test several times in work of my own, and in work for those who were employing me in years gone by, and in work for a whole trade.

o o o

It is true the scale on which this has been successfully done in my own experience has not been great. In one trade where I had the satisfaction of being largely instrumental in raising prices, there was undoubtedly a special opportunity for such an achievement from the circumstance that there were only a score or two of firms in that trade in the Metropolis to be induced to take this price raising line.

o o o

None the less even that trade presented its peculiar difficulties. Some who conducted it were men of less experience of affairs and perhaps it is permissible to say, were of less education and less general culture than the typical master printer; and lack of education and culture are apt to have their accompaniment in the undue presence of suspicion.

o o o

In general, despite all the exceptions that can be urged—in general, men who distrust each other through and through, do so because they do not know each other through and through.

o o o

Under pressure of straits, self created or brought upon one by others, under pressure of straits a man may make moral blunders. But the average business man means the "square deal." Hear Rabbie Burns on that:

"I'll no say men are sinners a',
The real heartless wicked,
Who know no check but human law,
Are to a few restricted."

o o o

But on that price raising that was accomplished.

o o o

The general manager of one firm in the trade to which I am alluding said to me, "The three and a half years during which that agreement was in full operation were the best period in our whole fifty years course.

o o o

The managing director of another house in the same trade said to me, "While that price raising agreement lasted we made so much (naming a sum) in our business at ———. Directly it fell into abeyance for a year or two, we lost about the same amount per annum.

o o o

That price raising was really a lasting success, although there was a falling off for a while after three and a half years. The reconciliation is that the falling off was itself but temporary.

o o o

The circumstances which had lead to that halt were reconsidered.

o o o

A new arrangement upon a better plan was adopted, and the trade's prices are now higher and firmer than they have ever been. I believe, too, that not a single man in the trade has been in any way injured, whether he has concurred in this price raising arrangement or not.

o o o

An arrangement with journeymen in the trade is a part of the success of this particular effort. But put that aside. It is still worth while to ascertain costs more carefully, and it is still practicable to raise prices. In American printerdom where the 48 hour rules, masters were never so hopeful by all indications; certainly were never so strenuous; and no working arrangement with journeymen has come into the matter there.

o o o

Don't go into the Conference with a prejudgment that "It can't be done."

o o o

"The man who says a thing can't be done is sometimes rudely interrupted by somebody doing it."

o o o

Don't go into the Conference with a grudging sort of feeling that although it perhaps "can be done," it will mean a lot of trouble. Let it. What's trouble? Grasp trouble and it changes its nature. Let's give to the task not what effort we barely *must*, but all the effort we *can*.

o o o

Don't go into it full of derision of past talk and past failure. Granted that there have been comedies. What of it? Who will pay for "presenting," as stage managers phrase it—for "presenting" the comedy? For presenting ourselves as the comedians? No one will pay us, because no public attends our performance. We are the players and the audience too. When we deride we are deriding ourselves.

o o o

To which I would attach this little bit of philosophy also, that two things in life are not worth worrying about; things that can be helped and things that can't be. Personally I'm ready to worry about all the rest. But I've never been able to find them.

o o o

Bad costing can be helped. Go into the Conference next Tuesday determined to help it. Don't worry. Work.

A preachment I know, but there are times for all things. This week is a week for a preachment, and I have a right to preach. I use that right, and end with this quotation from I don't know whom, but I pasted it inside my pocket wallet as a hint to myself:—

o o o

"Nature gave you greater intelligence than you use—finer feelings than you obey. Nature designed you for success."

o o o

FRANK COLEBROOK.

SPECIAL PREPAID ADVERTISEMENTS.

IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us by the first post on Wednesday to insure insertion the following day.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS

(3 Insertions: TWO SHILLINGS),

and Fourpence for each additional Eight Words. Minimum Charge, One Shilling.

BUSINESSES FOR SALE or WANTED, MACHINERY WANTED or FOR SALE, SALES BY AUCTION, TENDERS, PUBLIC APPOINTMENTS, MISCELLANEOUS—One Penny per Word.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C.

Situations Wanted.

AGENCIES required by competent TRAVELLER with connection amongst Printers and Stationers in the North and Midlands; 20 years' experience in the trade; good references.—Address, No. 13,157, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13157

PRINTING INK MAKING.—Advertiser, young, energetic, 14 years' experience, thoroughly practical, latest methods, seeks position of trust; would travel (London) if desired.—Address, No. 13155, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13155

Machinery and Plant for Sale.

ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos.—Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

Property To Let.

The Coming Cost Congress.

THE first organised effort in this country to bring master printers from all parts of the kingdom together for the purpose of studying and discussing the best methods of conducting the printing business on profit-producing lines is about to be brought to fruition. By the time our next issue goes to press the first British Cost Congress will have just completed its labours, and master printers from the leading towns of England, Scotland, Ireland and Wales will be pondering the studied reasoning of our most enlightened printers on such vital questions as organisation, systems, costs, selling prices and processes. As was briefly announced in our last issue, the London Master Printers' Association have arranged a Cost Congress to be held in the historic Hall of the Stationers' Company on Tuesday and Wednesday next, to which are invited master printers, large and small, works managers, overseers, cost clerks and bookkeepers—indeed, "everybody in the trade who is anxious for enlightened assistance in the work of making the business he is engaged in a profit-earning concern." The remarkable success that has attended the working of the costing system in America and Canada, together with the unbearable condition to which the printing trade in this country is rapidly tending, has prompted the Federation of Master Printers of Great Britain to take the necessary action which has resulted in the holding of this important Congress, with its many possibilities for the future welfare of the craft. That action was the calling together of some of the brightest brains in the craft to help them perfect a simple yet effective system whereby, with the minimum of labour and expense, every printer may tell at what figure it is positively dangerous for him to take a job, because it will show him the precise cost of labour and material in each department. This is a great achievement, an invaluable possession for the master printer, and it remains to be seen how far it has been realised. It is to be hoped that the printers who attend the Congress will take a broad view of the whole matter, avoiding all side issues in whatever discussion they may take part in, and keep an open mind for the support of that which will be uplifting for the craft as a whole.

* * *

Avoiding Industrial Disputes.

A REPORT has been issued by Sir George Askwith on the Industrial Disputes Investigation Act of Canada. Sir George visited Canada in the months of September and October last, at the request of the Government, and inquired into the working of this Act, popularly known as the "Lemieux Act," which requires that any dispute arising in the class of industries named shall be submitted to a Board of Conciliation and Investigation, with a view to arriving at a settlement before a strike or lock-out can be legally brought about. At least 30 days' notice of an intended change affecting conditions of employment with respect to wages or hours is to be given, and pending the proceedings before the Board, in the event of the change resulting in a dispute, the relations to each other of the parties to the dispute are to remain unchanged, and neither party is to do anything in the nature of a lock-out or strike. There are heavy penalties for infringing the provisions of the Act. The finding of the Board is not binding, but leaves the parties to the dispute free to take such action as they may respectively choose, but, on the other hand, they may agree to be bound by it. Sir George Askwith's conclusion is that where the Act has been frankly accepted as a means of preventing disputes it has worked very well, but where by the imposition of penalties efforts have been made to enforce it the results have not been so satisfactory. Sir George thinks that an Act on the lines of conciliating parties, and of making recommendations where conciliation was unavailing, omitting the restricting features of the Canadian Act, would be quite suitable and practicable in this country.

* * *

Machinery Assessments.

ENGLAND, unlike Ireland and Scotland, has many disadvantages in regard to assessments and taxes. Why there should be a difference in say one industry, seems hard on the English manufacturer. Take the system of fixing assessments: In one district in England the assessors include loose machinery, whilst in another they do not, and it is contended now that there should be a uniform system throughout the country. The question is of paramount importance to owners of printing works and those engaged in the allied trades, as it is necessary that the law should be amended in some shape or form. Mr. Humphrey-Davies, surveyor to the Machinery Users' Association, recently delivered in Manchester a lecture on the subject, and he pointed out that the difficulties experienced at present in England arose from a decision by Lord Esher in a Tyne boiler works case. In Scotland by the Lands Valuation (Scotland) Amendment Act, 1902—passed at the instance of the Machinery Users' Association—it was enacted that "Section 42 of the Valuation Act, 1854, shall be read and constructed as if the following proviso were inserted after the words 'and all machinery fixed or attached to any lands or heritages, that is to say: Provided that in any building occupied for any trade, business or manufacturing process, the expression 'machinery' fixed or attached' shall be construed as including all machinery, machines, or plant in or on the lands or heritages for producing or transmitting first motive power, or for heating or lighting such building, but save as

Digitized by Google

herein provided shall not include machines, tools, or appliances, which are only so fixed that they can be removed from their place without necessitating the removal of any part of the building." In Ireland the law was substantially the same thing. What is now wanted in England is an Act passed similar or equal to the Scottish Bill, and those who are heavily rated should not rest contented until they get it.

* * *

Co-Partnership.

At a meeting of the Royal Society of Arts, Mr. Aneurin Williams dealt with co-partnership in a very interesting paper. He expressed the opinion that co-partnership gave the worker an accumulating interest in the capital, and, as the worker's voice in control increased, the absolute *régimé* to which he was subjected was necessarily modified, and eventually transformed. As for objections on the employers' side, it had been said that every form of profit-sharing meant the employer giving away a part of his profit which properly belonged to him in return for his work and the risk which he took. Mr. Williams contended that where the employers showed more consideration for the interests of their workers, and where the workers had a direct interest in the result of their work, the amount of profit to be divided was increased, so that it was perfectly possible for the employees to receive a share without the employers receiving less than they would under the ordinary wage system. Then as for the plea that the employer was asked to give away the control of his business into the hands of men who had never been trained to exercise it, he declared that, while the working shareholders were accumulating capital and voting power, they were also accumulating experience. Mr. Williams also pointed out that the co-partners in the South Metropolitan Gas Co. owned, on an average, £80 each in the capital, which, he said, must mean that those who had been there since the system started averaged at least twice that sum. Might it not be that when the system had been working twice as long, the capital of the workers would be several times as much? Applied generally, would not a change be gradually wrought which, acting with other forces of reform would, to a large extent, do away with the distinction between owners and workers, and transform capitalism into a form of co-operation

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Feb. 12th, 1913.

SUPPLIES of money have continued scarce, and Lombard-street has increased its obligations to the Bank of England during the past week. The demand has been keen, and rates have ruled high. The general charge for both short loans and weekly advances yesterday was 4¾ per cent., and plenty of the former changed hands at 5 per cent. The tone continues firm in the discount market. Bullion movements this week have resulted to date in a net efflux of £115,000. In stock markets the German navy announcement made a good impression, but the Balkan struggle has a checking influence, and there is no sign of development in business. Consols are weak and a little lower than a week ago, the quotations being 74½ to 74⅝ for money and 74 1/16 to 74 3/16 for the account.

Business in the miscellaneous industrial market has been inactive and dull this week, the opening of the new Account on Tuesday bringing no increase in the volume of business. Our list of printing, newspaper and publishing shares shows three upward movements and none downwards. Amalgamated Press Ord. are up ⅛ to 6⅞–7⅛; International Linotype have risen 1 to 78–83; and Raphael Tuck and Sons Pref. have improved 1/16 to 4 15/16–5 1/16. Business has been done during the past seven days in Amalgamated Press Pref. at 20s. 7½d.; in Associated Newspapers Pref. at 20s. 6d., 20s. 3d. and 21s.; in Sir Joseph Causton and Sons Pref. at 5⅛; in John Dickinson and Co. 1st. Pref. at 101xd.; in Eyre and Spottiswoode Deb. at 86¼; in Ilford Ord. at 13s.; in *Illustrated London News* and *Sketch* Deb. at 64½; in International Linotype at 82 and 79; in *Lady's Pictorial* and *Sporting and Dramatic* Publishing Pref. at 58s. 9d.; in Linotype and Machinery A Deb. at 60½, 60 and 60¼, and in the B Deb. at 46½; in George Newnes Pref. at 15s. 6d., 16s., 15s. 3d., 16s. 3d. and acc. 15s. 3d.; in C. Arthur Pearson Pref. at 66s. 3d. and 68s. 9d.; in Raphael Tuck and Sons Ord. at 18s. 3d., 19s. and 17s. 6d., and in the Pref. at 5 1/16, 5 3/32 and 5 5/32; in Waterlow and Sons Pref. at 7 1/16; and in Weldons Pref. at 19s. 4½d.

DIVIDENDS AND REPORTS.

"FINANCIAL TIMES."—The directors of the *Financial Times*, Ltd., recommend a dividend on the preference shares for the half-year ended December 31st last at the rate of 5 per cent. per annum, making 5 per cent. for the year, and on the ordinary shares for the same period at the rate of 15 per cent. per annum, making 15 per cent. for the year. A bonus of 12½ per cent. on the ordinary shares is also recommended, making, with the dividend paid in September last, a total distribution on the ordinary shares for the year of 27½ per cent.

"ILLUSTRATED LONDON NEWS" AND "SKETCH," LTD.—The directors of the *Illustrated London News* and *Sketch*, Ltd., report that the result of the past year's working is a trading profit of £38,213 3s. 10d. After deducting the interim preference and ordinary dividends and interest on debentures and directors' fees already paid, there remains a balance of £14,477 18s. 10d., to which is added £3,505 13s. 8d., the unappropriated balance from the previous year, making £17,983 12s. 6d. The directors recommend a final dividend of 8 per cent. per annum for the half-year ended December last, making 6½ per cent. for the complete year. A balance of £3,921 2s. 6d. is carried forward to the current year. The dividend for the full year of 1911 was at the rate of 6 per cent.

COMPANY NOTICES.

BIRMINGHAM ADVERTISING TABLET CO., Ltd. And Reduced.

Notice is given that the Order of the County Court of Staffordshire, held at West Bromwich, dated January 14th, 1913, confirming the reduction of the capital of the company from £10,000 to £6,334 10s., and the minute (approved by the Court), showing with respect to the capital of the company as altered the several particulars required by the Statutes, were registered by the Registrar of Companies on January 31st, 1913. The Minute is in the words and figures following:—"The capital of the Birmingham Advertising Tablet Co., Ltd., is £6,334 10s., divided into 10,000 ordinary shares of 10s. each, and 2,669 deferred shares of 10s. each, numbered 17,332 to 20,000 inclusive. At the time of the registration of this Minute, 7,331 of the said Ordinary shares have been issued, and have been and are to be deemed fully paid up, and none of the said Deferred shares have been issued.

DAILY EXPRESS, Ltd.

Notice is given, that a petition for the winding-up of the company was, on January 31st, presented to the Court by the Right Honourable James Baron Joicey, a creditor of the company, and that the said petition is directed to be heard before the Court, at London, on February 18th.

COMMERCIAL INTELLIGENCE.

Re LUCIEN STOKVIS. "Sporting Luck."

The first meeting of creditors was held the other day, at the London Bankruptcy Court, before Mr. Walter Boyle, official receiver, under the failure of this debtor, described in a creditor's petition as a banker, stock and share broker and newspaper proprietor. Mr. Walter Boyle, official receiver, reported that these proceedings had been consolidated with those of Lewis and Co. which were already in the Court, and in connection with which Mr. Stokvis had already been adjudged bankrupt. It appeared from his statements that he had assisted his wife in the business of a turf commission agent carried on as "Joe Drake." In June, 1911, he started business as a stock and share dealer at 1, Austin Friars, in the name of Stokvis and Zoven. He never had any capital and did very little business there, but had backed horses with a fair amount of success and thus kept it going until the receiving order was made against him. In March, 1912, he started an advertising business in Fenchurch-street under the style of Lewis and Co. Then in the following June he started *Sporting Luck* at Whitefriars-street, and in November last he promoted the Sporting and Financial Press, Ltd., with a nominal capital of £25,000, to acquire it. The purchase price of £15,000 was paid in shares, which he still held but had not yet attained any value. The company was still working the paper and the debtor acted as managing director at a salary of £250 a year. His liabilities, roughly estimated at £3,400, were chiefly in respect of money borrowed to run the paper and of Stock Exchange differences. The debtor had also promoted the Simplex Polish Co., Ltd., of Northampton, and *Quizzes*, a weekly 1s. sporting leaflet. Apart from his shares in the Sporting and Finance Press, Ltd., the debtor retained no assets. He had speculated in South African mines and in American, Canadian and Home rails, with the result that since November, 1911, he had lost £1,000. The failure was attributed to those losses on the Stock Exchange, law costs, loss

Mr. ROBERT H. RUDDOCK

IS favoured with instructions by H. H. Bobart, Esq., F.S.A.A., to SELL BY AUCTION, on the premises as above, on TUESDAY, 18TH FEBRUARY, 1913, at 2 o'clock, the valuable PLANT AND MACHINERY of the IVORITE NICKEL ELECTRO FOUNDRY CO., LTD., including:—Two Depositing Dynamos, by Canning and Grauer; five Depositing Tanks; Rods and Plates; Presto Matrix Machine; "Lion" Radial Arm Routing Machine, by H. Williams and Co.; "Lion" Vertical Rotary Planing Machine, by H. Williams and Co.; two Rotary Edge Planing Machines, by Esson and Williams; two Circular Saw Benches; Stereo Plate Planing Machine, by H. Williams and Co.; Powerful Toggle Matrix Press, by Hewitt Bros.; three Stereo Casting Boxes; two Stereotyper's Hot Presses; 32-in. Shooting Board and Plane; Hand Piercing Machine; four Iron Imposing Surfaces; Steel Beating Surface; two 6-cwt. Stereo Melting Pots, with atmospheric gas burners and hoods; 2-cwt. ditto; Ladles; Core Boxes; Column Moulds; Shafting; Belting; Office Furniture; Dey Time Recorder for 50 Hands.

On view day prior and morning of Sale, and Catalogues of Messrs. Saunders, Bobart and Saunders, 22, Basinghall Street, E.C., and of the Auctioneer, 71, Fleet Street, London, E.C.

2.—HIGH BARNET.

St. Andrews Press, Union Street, High Barnet.

Mr. ROBERT H. RUDDOCK

IS favoured with instructions to SELL BY AUCTION on the premises, as above, on THURSDAY, 20TH FEBRUARY, 1913, at 1 o'clock, valuable LETTERPRESS PLANT AND MACHINERY, comprising:—Demy Wharfedale Printing Machine, by Payne, with flyers; Crown Folio Minerva Platen, by H. S. Cropper; 26-in. Diagonal Guillotine; Super Royal Columbian Press; 25-in. Iron Ink Table; Reel Wire Stitcher, by Kampe; 1-h.p. Nominal Gas Engine, by Crossley Bros., Ltd.; Shafting, etc.; Foolscap Folio Stereo Foundry; 2¼ tons Book and Jobbing Type; Chases; Galleys; Cases; Wood Letter; Frames, Racks, etc. Also the VALUABLE LIBRARY of about 3,000 VOLUMES, including Old and Rare Editions in Vellum; also the School Furniture, Band Instruments, etc.

On view day prior and morning of Sale, and Catalogues of the Auctioneer, 71, Fleet Street, London, E.C.

3.—LONDON, E.C.

Expiration of Lease.
33, King William Street, London, E.C.

Mr. ROBERT H. RUDDOCK

IS favoured with instructions by Messrs. J. J. Keliher and Co., Ltd., who (owing to the re-building of the Street) are relinquishing this Branch, to SELL BY AUCTION, on the premises, as above on THURSDAY, 27TH FEBRUARY, 1913, at 1 o'clock, the

Digitized by Google

valuable and extensive LETTERPRESS PLANT AND MACHINERY, comprising:—Nearly new Double Demy Standard Babcock Cylinder Machine; two Double Demy Wharfedale Printing Machines, with geared inkers, by Dawson and Sons; Double Crown Bremner Cylinder Machine; Royal Folio Britannia Platen, by Furnival and Co.; Demy Folio Chandler and Price Platen; Crown Folio "Little Wonder," by Powell; Crown Folio Cropper Platen; Demy 8vo Model Press; 8-h.p. Otto Gas Engine; Shafting; Belting, etc.; 32-in. Guillotine Cutting Machine, by Greig and Sons; 16-in. Card Cutter; No. 7 Reel Wire Stitcher, by Aug. Brehmer; Double Crown Albion Press; four Iron Imposing Surfaces; Lead Cutter; Mitreing Machine; about Four Tons Book and Jobbing Type; 400 Cases; Chases; Galleys; Fixtures; Fittings; Office Furniture; Dey Time Recorder for 50 Hands; Mahogany Bookcase; Counters, etc.; Oak Roll Top Desk, etc.

On view day prior and morning of Sale, and Catalogues of the Auctioneer, 71, Fleet Street, London, E.C.

Metropolitan Borough of Islington.

PUBLIC LIBRARIES.

THE Council of the above Borough is prepared to receive Tenders for the Binding of Books for the Public Libraries for one, two or three years (at the option of the Council), commencing 1st April, 1913. Forms of Tender and Contract may be obtained on application at the Town Hall, Upper Street, N., on and after Monday, 17th February, 1913. Tenders (properly endorsed) must be received by the undersigned not later than noon on Thursday, 27th February, 1913.

The Council does not bind itself to accept the lowest or any tender.

WM. F. DEWEY,
Town Clerk.

Town Hall, Upper Street, N.
6th February, 1913. 13958

PATENTS FOR SALE OR LICENSE.

THE proprietor of the British Patent No. 27,497, of 1910, relating to PAPERMAKING MACHINES, is prepared to accept tenders for the manufacture of the invention in Great Britain or to consider applications for the grant of licenses or disposal by purchase of his rights. Applications in the first instance should be addressed to Messrs. KILBURN AND STRODE, Chancery Lane Station Chambers, High Holborn, London, W.C. 13952

THE proprietors of Letters Patent No. 10,187, of 1910, relating to

"TYPECASTING MACHINES"

desire to dispose of the Patent or to grant licences to interested parties on reasonable terms with a view to the adequate working of the Patent in this country.

Enquiries to be addressed to—

CRUIKSHANK AND FAIRWEATHER, LTD.,
International Patent Agency,
65-66, Chancery Lane, London, W.C.
13966

THE Proprietor of the Patent No. 10,781 of 1899, for "Improvements in Bottles or Receptacles for Gum, Paste, and the like," is desirous of entering into arrangements by way of license and otherwise, on reasonable terms, for the purpose of exploiting the same and ensuring its full development and practical working in this country.—All communications to Haseltine, Lake and Co., Chartered Patent Agents and Consulting Engineers, 7 and 8, Southampton-buildings, Chancery-lane, London, W.C. 13940

of about £5,000 in connection with *Sporting Luck*, the non-success of that publication and his consequent inability to deal with his shares in the company. Mr. Richard Farlow, C.A., had been appointed as trustee under the proceedings of Lewis and Co. and would consequently also act to this estate.

A WATERY ADVERTISEMENT.—If we are to believe the *Novelty News*, a new form of advertising recently made its appearance in Paris. It is a by-product of the stringent police decree prohibiting the dropping of handbills in the streets. This ordinance has hampered the business of handbill distribution very seriously, and advertisers are on the alert to discover other means of bringing themselves and their wares before the pedestrian audience of the boulevards. The latest device to which we have referred consists of specially constructed shoes, with immense soles of india rubber. There is, of course, a man inside them to keep them on the move. By an ingenious contrivance, the rubber soles form a pad which is continually kept damp by water contained in a can on the man's back, and flowing to his feet through pipes concealed beneath his clothes. Thus at every step an advertisement is imprinted in wetness on the pavement. It lasts for quite sufficient time to enable quite a large number of people to peruse it.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

DISTRIBUTION OF ASSETS.

GOODWIN, E. J., late of Carlton Holme, Buxton, advertising agent. Claims by March 19th, to Batty, Ford and Buckley, 2, Booth-street, Manchester, solicitors for the executrix.

THE BANKRUPTCY ACTS, 1883 AND 1890.

RECEIVING ORDER.

WORSTENCROFT, A. W., lately trading as J. Brandwood and Co., at 21, Saville-street Oxford-road Manchester, bookbinders' materials manufacturer. Date of order and of adjudication order, February 6th, made on the debtor's own petition.

FIRST MEETING AND PUBLIC EXAMINATION.

JOHNSON, A. L., lately trading at 183, Broad-street, and 189, Alum Rock-road, Saltley, Birmingham, stationer, etc. First meeting, February 19th, noon, at 191, Corporation-street, Birmingham. Examination, March 10th, 2.30 p.m., at the Court House, Corporation-street, Birmingham. Date of adjudication order, February 6th.

ADJUDICATIONS.

HOLT-WHITE, W. E. B., 13, Champion-grove, Denmark-hill, London, S.E., journalist and author. Date of order, February 6th.

CHARLEY, F., late of 31, Hilldrop-crescent, Holloway, London, N., journalist. Date of order, February 4th.

NOTICE OF INTENDED DIVIDEND.

DEWHIRST, R., trading as R. Dewhirst and Sons, 63, Halifax-road, and Herald-buildings Todmorden, Yorks, printer, publisher, etc. Claims by February 22nd to H. Eastwood, 15, Church-street, Todmorden.

NOTICES OF DIVIDENDS.

BLIGH, W. H., Caxton House Works, Broad-street, Ramsgate, printer. First dividend of 10s., February 19th, at the Official Receiver's Office, 68a, Castle-street, Canterbury.

KING, J., 20, Hartington-road, Middlesborough, paper merchant, etc. First and final dividend of 1s. 11½d., February 18th, at the Official Receiver's Office, Court-chambers, Albert-road, Middlesborough.

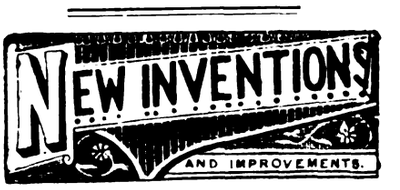
APPLICATION FOR DEBTOR'S DISCHARGE.

WRENN, E. W., 45, High-street, Alton, Hants, bookseller and stationer. To be heard March 19th, 11 a.m., at the Castle, Winchester.

NOTICE OF RELEASE OF TRUSTEE.

PEARSON, J. R. J., trading as A. Flint and Co., 68, Church-street, Camberwell, London, S.E., fine art publisher, etc. Trustee, A. Willmott, C.A., 14, Old Jewry-chambers, E.C. Released January 29th.

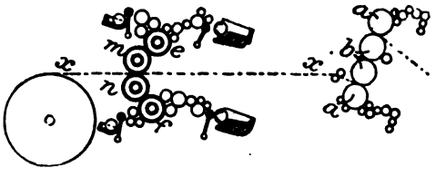
THE COMPANIES ACTS, 1890 AND 1908.



FIRST MEETINGS.

THE SWIFT PRESS, LTD., 27, Clement's-lane, London, E.C. First meeting of creditors, February 26th, 11.30 a.m., and of contributories, same day, noon, both at 33 Carey-street, Lincoln's-inn, W.C.

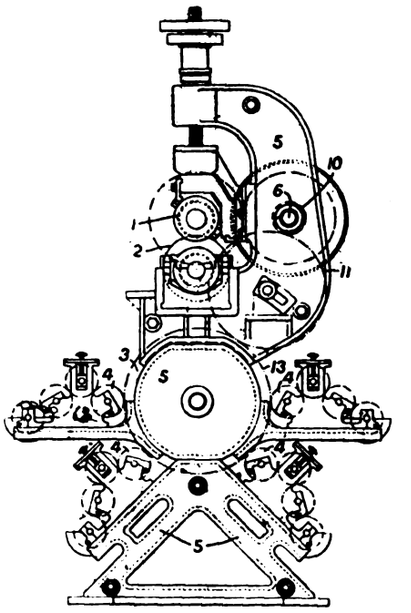
SCOTLAND.



SEQUESTRATION.

THE GOVANHAUGH PAPER CO., Pollokshaws, Glasgow, papermakers. Sequestrated February 8th. Meeting to elect trustees and commissioners to be held February 20th, noon, at the Faculty Hall, St. George's-place, Glasgow. A. Brownlie, 147, St. Vincent-street, Glasgow, agent.

Rotary Offset Machines.



In this invention, patented by Messrs. C. and E. Hermann, a machine for printing a web of paper for the production of illustrated newspapers, books, paper bags, wrapping paper, etc., of the kind by which the illustrations are printed separately from the letterpress by offset apparatus, comprises a rotary typographic printing mechanism and a web supply reel, and an interposed lithographic offset printing mechanism. The lithographic offset printing apparatus comprises planographic printing cylinders *e*, *f*, with suitable damping and inking devices, and offset cylinders *m*, *n* by which the web is simultaneously printed on both sides. The

typographic printing is effected by printing cylinders *a*, *a*, and impression cylinders *b*, *b*. The web *x* is led between the cylinders *e*, *f*, by which it is printed on both sides with the illustrations, and then to the typographic printing mechanism.

Rotary Embossing Machines.

Mr. H. W. Sanderson has patented a combined printed and embossed wall-paper produced in one machine, and the printing rollers and the embossing rollers are of substantially the same size and are driven at substantially the same speed by driving all the rollers from a common shaft. The printing rollers are formed slightly larger than the embossing rollers to allow for gathering up of the paper due to the depth of the embossing, and correct register is thus assured. The paper passes first around an impression roller 3 co-operating with printing rollers 4, and then between embossing rollers 1, 2 which are

geared together. The rollers are mounted in framings 5 in which is also mounted the main driving shaft 6. This shaft is geared directly to the roller 1, and to the rollers 4, through gear wheels 10, 11, 13, the last being free on the shaft of the impression roller and being geared to the rollers 4. The paper may be dried after printing prior to embossing, and the apparatus may be used for separate embossing or printing and have their edges trimmed. The apparatus may act on papers formed of two layers secured together as described in Specification 29,493, 1909, and after the webs are united they are passed through lined or ribbed rolls which slightly indent the combined web on one or both sides.

Music Printing—Transfers.

The invention of Mr. W. Enderlein is specially suitable for the production of "music-print originals, as substitutes for music engravings, music compositions (in type) and autographic music." A transparent sheet is covered with an elastic transparent coating of gelatine, celluloid, etc., and collodion, and is then varnished and coated with a metalliferous colour. A suitable tool ("Noteurastal") is used to form the lines of the staves, by removing the colour so that parts become permeable to light, and "a ridge is formed by the tool on one side of each line, which ridge is required for the insertion of the music characters." The notes, bars, rests, etc., are then apparently produced by magnetised engraving tools or wheel dies which take away the metalliferous colour. "The originals are covered over with an opaque colour and are transferred to a transparent sheet so as to transfer directly to a printing surface without necessitating the usual double printing."

LECTURES ON THE History of Printing & Bookmaking.

The fifth lecture in the course of six on "The History and Progress of the Arts of Printing and Bookmaking," by Mr. R. A. Peddie, at the St. Bride Foundation Institute, was given on Monday evening, and related to the nineteenth century. On a table were a number of nineteenth century books illustrative of the lecture, including type specimen books, Kelmscott Press works, specimens of coloured illustrations, books printed by the German Imperial Printing Office, and a number of enlarged specimens of German types from negatives produced for William Morris.

Mr. Peddie said the hundred years comprising the nineteenth century were so crowded with events, inventions and developments in the printing industry, that it was exceedingly difficult for anyone who wished to go through the period in the short time at his disposal. At the beginning of the nineteenth century everything was done by hand. Printing was entirely hand printing, papermaking was entirely by hand, and photography did not exist. So that in 1800 we were no further advanced than we were almost at the beginning of the period of historical printing. The type faces of the early part of the nineteenth century were not good; they had no artistic basis. They were clumsy, fat-faced types of the most inartistic character. Here and there they found a good type in the specimen books, but the prevailing type that was wanted by the printer and the public was this fat-faced type that was so prominent about 1830. There was a strange development in the way of ornamented types. All the serifs were exaggerated, and there were wonderful Gothic and Renaissance ornaments round the letters.

For the first quarter of the century one was generally told to refer to the Chiswick Press but chronologically speaking it was not quite accurate, because the first Whittingham was not a remarkably good printer; there was nothing in his printing to mark it out as different from anybody else's. The first Chiswick Press printer really of consequence was Charles Whittingham the second, who founded the press in Took's-court. He was a nephew of the first Charles Whittingham, and he ultimately became the owner of the original Chiswick Press at Chiswick. Pickering was an artist in book production, and the simplicity and dignity of his publications had a great influence on the work of his time. From 1828, when the first work was printed by Whittingham for Pickering, until his death in 1854, the close association of printer and publisher went on and produced most excellent results.

At this time a curious circumstance resulted in a complete change of the type faces in common use. Pickering wanted to issue an edition of Juvenal in an old form of roman type, and Caslon's were asked to look up their old specimen books and punches. They found the original punches of the old-faced type cut by the first Caslon, and the Juvenal was ordered to be printed. There was a hitch in the printing, and in the meantime the Chiswick Press got an order to print a work entitled "The Diary of Lady Willoughby," the idea being that it should be printed in an old-faced type to imitate as far as possible the work of the seventeenth century, and the Caslon type being in use, it was printed with that. This was the first book we knew of printed in a revival of old-faced type.

From 1840 to 1890 was a period of expansion. Cloth binding advanced considerably during the first part of this period. The materials used in book production were sound. They did not care in the least about the relative proportion of margins and type faces, but they produced books that were lasting. During the 80's and 90's someone discovered there were various kinds of coloured inks to be obtained, and in nearly every job produced every colour of the rainbow was put in, and every form of type face to be found in the office.

A revival started with the Kelmscott Press in 1891, a revival showing what could be done by the printing press when under the guidance of an artist. Having briefly referred to the influence exerted by William Morris on printing in this country and America, Mr. Peddie turned to illustration, and dealt with the more dominant processes, such as chromolithography, which attained the height of good workmanship in the early fifties, and reached its greatest height in Paris, and process work, which began to be used in 1885, and early in the nineties was adopted for colour printing.

Coming to the mechanical side of the craft, the lecturer said it was the most important because the development of the whole printing trade in the nineteenth century depended upon it. He then gave a brief outline of the development of the printing press from the first iron press invented by Earl Stanhope in 1800, the efforts of Koenig, who first applied power to the printing press, the introduction of the flat-bed and platen, down to the web machines and the enormous newspaper presses of to-day.

The lecture, which was illustrated with lantern slides, was very closely followed by a fairly large audience, and numerous questions were asked and answered at the close.

Next Monday, Mr. Peddie will give his concluding lecture of the series, and will describe the rapid developments of to-day, dealing also with type faces of the twentieth century, new methods of illustration, paper, and the book of the immediate future.

The Clavering Press Dinner.

Under the auspices of the companionship of Messrs. R. Robinson and Co., Ltd., Newcastle-on-Tyne, the annual dinner was held on Saturday evening last at the Norfolk Hotel, Grey-street, in that city. A goodly number assembled under the presidency of Mr. Geo. Macdonald (father), supported by Mr. C. Allan (works manager), Mr. G. D. Stafford (overseer), Mr. J. C. Hadden (secretary, Newcastle branch of the Typographical Association), and several other visitors.

After the removal of the salt, a lengthy programme of song and recitation (which was fully up to that annually submitted, and withal "All Robinson's"), was gone through in capital style. Many beautiful old numbers were given: "My Old Shako," "The Blue Alsatian Mountains," "The Skipper," "Where the Mountains Sweep Down to the Sea," "Excelsior" (duet), "Mary," "Annie Laurie," and many old favourities were heard once more. An attempt was made by Mr. Waters to shelve the old love, "Mary Macintyre," but he submitted with good grace, and the vim put into the chorus proved her lasting popularity. Mr. Darby's sweet tenor voice was one of the treats of the evening; Mr. Macdonald rendered his good old numbers with all his wonted power and skill; Mr. Dixon's versatile contributions were highly appreciated, especial favour being accorded the old Tyneside favourite, "Keep your Feet Still, Geordie Lad"; Mr. Wedderburn's "Poor Old Joe" was another which was well supported; also "The Sad, Sad Sea," by Mr. Burns; while Mr. Graham's "Skipper" was excellent. Mr. W. Lee gave "The Execution of Montrose" with a power and pathos which proved that the veteran was still full of vigour and feeling, and his contribution well merited the unstinted applause.

The toast of the evening, "Messrs. R. Robinson and Co., Ltd.," coupled with the name of Mr. C. Allan, was proposed by the chairman, who expressed the hope that the amicable relations which had so long existed between them and the firm would continue in the future, and that 1913 would be a lucky year. The toast was accorded musical honours.

Mr. Allan, responding, said it gave him very great pleasure to be with them, and to see around him so many of the old familiar faces. As to the superstition about the unlucky 13, as far as the year had gone it promised to be a very prosperous one indeed. He thanked them for the hearty manner in which they had received the toast of the firm, and said that with their hearty co-operation in the work they need fear no rivals.

"The Chapel" was proposed by Mr. T. Wedderburn in a eulogistic speech, and was ably responded to by the Father.

The pleasant reunion was concluded with "Auld Lang Syne." Mr. James Shiel was the accompanist.

The card issued was embellished with apt quotations, the following preceding "Auld Lang Syne":—

> When case and pressmen a' agree
> To spend an hour in harmony,
> And cares and troubles for the day
> Have struck their tents and stole away,
> What care we hoo the warld should hang?
> We'll toast and sing a joyous sang.

THE *Liverpool Mercury* says that recently sold as junk because there was no use for it and no place to store it, the plant of the *Cherokee Advocate*, the only newspaper in the world printed in an Indian language, in Indian characters, may be retained intact at Fort Gibson as a matter of sentiment. The *Advocate* was first published in Georgia, prior to the migration of the Cherokees to Indian Territory. The types for the paper were manufactured by a typefoundry in Chicago, and were very expensive, the moulds having to be made especially for this one order. In order to keep the paper going it was necessary to take young Cherokees and teach them to set type. No one except Cherokees could read the characters, of which there were eighty-six. The Cherokee National Council saw to it that there were always as many as four compositors in the nation who could set this type.

Printers' Managers and Overseers ASSOCIATION.

Annual Dinner of London Centre.

The nineteenth annual dinner of the Printers' Managers and Overseers Association (Patent Body) was held on Saturday evening, at the Holborn Restaurant (Venetian Chamber), when the President, Mr. C. J. Gray, was in the chair, and there were also present: Messrs. F. W Bridges (Organiser of Printing Trades Exhibitions), T. E. Naylor (Sec., London Society of Compositor), J. Mortimer (Sec., Printers' Pension Corporation), E. W. H. Walker, W. Scotcher, J. N. Poole (Hon. Sec., Liverpool Centre), H. B. Lane (President, Birmingham Centre), W. H. Davey (Birmingham Centre), J. R. Riddell and A. E. Hudson (North Midlands Centre), R. F. Francis (Manchester Centre), J. Davies (ex-President), T. A. Catling (vice-president), E. C. Moyce (secretary), F. W. Seeley (trustee), C. Durston (treasurer), R. B. Hardie, H. W. Jackson, W. F. Moore, G. Phillip, J. G. Pugh, W. W. Curtis, E. H. Berryman, W. Cole, M. C. Davenport, W. H. Edbrooke, W. Hermon Gill, F. Hedger, R. Innes, D. J. Milne, J. J. Smith, A. Spring, G. W. Terry, J. G. Wicken, L. Wiles, H. L. White, etc., the company numbering about 200.

A telegram was despatched to the Manchester Centre, sending "Hearty greetings to Manchester from Parent Association and representatives of other Centres, hoping to meet you in the rival port next June," and in reply to a telegram received from the Edinburgh Centre—"Edinburgh sends hearty greetings to the old folks at home"—one was sent back reciprocating the greetings and sending best wishes from London.

The Association and its Majority.

In proposing the toast of "The Association," Mr. F. W. Bridges spoke of his great interest in the P. M. and O. A. and his long association with the printing trade. Referring back to the first printing trade exhibition with which he was connected, held at the Crystal Palace in 1902, he mentioned the names of some gentlemen who were connected with the exhibition, among them Mr. Hedger who was present that night, Mr. Thompson of Clowes, Mr. De Wilde, and many others. He attached great importance to the Association and the members who comprised it. Not being able to find a copy of their book of rules giving the qualifications of membership, he had put down on a piece of paper what he thought must be the qualifications to become a member of this Association, formed from his personal knowledge of its members, whom he had been privileged to meet at various times and under a variety of circumstances. First of all they must be intelligent, then they must be very unselfish, they must be capable, enterprising, sociable, loyal, and they must be plucky. All those qualifications he felt every member of the Association possessed, and he wished the employers could get to understand more than they did what those qualifications meant. They not only applied to each of them in their connection with the Association, but they applied in a stronger manner still to their attitude to the employers. The reason he put the qualification of pluck down was this: in 1902, when he had his first printing exhibition, they did—he was going to say a risky thing, and again in 1904 they adopted the same plan: they gave awards. They had to look round and find who could be the adjudicators of the exhibits, and they went to certain members of the P. M. and O. A. That showed they considered they possessed the necessary qualifications for being jurors. As regards the pluck, he did not know of very many men who would have cared about taking on that job. It was only a small exhibition in 1902, but in 1904 when some of the same gentlemen undertook the same work again he thought it was exceedingly plucky, because the manufacturers and exhibitors were naturally anxious to get the awards, and he wondered those jurors were not torn to pieces. They had such a lively experience in 1904 that they did not repeat the experiment in 1910. After congratulating the Association on the great success it had attained, and that to succeed the "grand old warrior," Mr. Davies, they had chosen a President who had a full determination to carry on the success still further, he spoke of their vigorous and healthy offspring, and wished that they might long continue to flourish and carry on the grand work they were doing. If they were able to accomplish all their worthy President had in mind their Association would become increasingly powerful, and he was sure in twelve months' time, when they celebrated their majority, they would everyone of them be prouder than ever of their Association. He wanted to participate with them in the commemoration of their majority. He had another printing trades exhibition coming on in 1914, and he hoped everyone of them would accept the invitation that would be sent to them by the management of the Exhibition, inviting them to take part in that great exhibition. He wished success to the Association, coupled with the name of one who was responsible very largely for its success, their esteemed Secretary, Mr. Moyce. (Applause.)

An Appeal to a Sense of Justice.

Mr. E. C. Moyce, in responding, thanked Mr. Bridges for the kind manner in which he had proposed the toast of "The Association," and for his kindly references to himself. They knew he was a very good friend of the Association. With regard to his allusion to the forthcoming Exhibition in 1914, which coincided with the twenty-first year of the Association, they remembered the big function they held at the Agricultural Hall in 1910, when they had a successful united gathering of all the Centres. Manchester held a combined meeting last year, Liverpool was going to hold one this year, and they had been already talking about holding a big united gathering in 1914 to celebrate the coming-of-age of the P. M. and O. A. Mr. Bridges had said theirs was a vigorous Association. They hoped it was. They had tried as far as it lay in their power to make it vigorous. They had gone along very successfully since he last addressed them in that room. They had practically added three new Centres to their list of Provincial Centres—Glasgow, Edinburgh and Dublin. They were now represented in the whole of the British Isles. Other Centres he hoped were coming along. The total membership of the Association was over a thousand. (Applause.) He remembered the time when he said, almost in the same place as he stood that night, that his great ambition was to see the membership reach 300. Considering that even 20 years in the life of an Association was a short time, they had done wonders, and it only rested with them and their friends in the provinces to double their membership again in another ten years. That the Association had done useful work had been said over and over again. They had done a great deal in charitable directions to help each other, and they had done a full share in assisting the interests of the craft to which they belonged. They had passed through various critical periods in the printing trade. He did not know whether they could say that the Association was affected very much either by the Insurance Act, or by the Super Tax as much as they deserved to be, but they had one little matter of their own affecting the trade which he wished to say a word about that night. They had as they knew for some time past been worrying round the vexed question of the notices to which overseers and managers were entitled. Many members of the Association had retained the membership of their trade unions. In normal times there had never been any question as to the fact that they were entitled to a notice beyond that to which the journeyman was entitled to give and receive. They had that recognised by every association in the trade—by the employers and by the workmen. They claimed that they were entitled to that notice at all times, that they were in honour bound to adhere to that term of notice at all times. (Hear, hear.) Some little time ago they opened this question in various quarters, as to whether they were or were not to hold their membership of the trade unions, and to adhere to the term of notice to which they were legally entitled, and to which, under an agreement verbally, tacitly, or by custom, they were bound to adhere. They tried by a conference with the Federation of Printing and Kindred Trades to settle the question by getting them to admit at all times what they acknowledged, and what they had acknowledged in writing, they were legally entitled to at normal times. That conference, up to the present time, had not resulted as they had hoped it would. He thought in what he said he would have every member behind him. Whilst they wished to be in harmony with all sections of the trade, upon this point there could be no compromise. (Hear, hear, and applause.) Having failed with the Federation, they were hoping to try another effort with the unions themselves in detail. Gentlemen present representing the unions must not think he was throwing down any gage of battle or anything of that kind. He was sure they would, as men of the world, recognise that what they had engaged to give in time of peace they must also concede in time of war, in the same way as they, in tendering their notices to the employer, honourably adhered to the agreement they had made for a fortnight's notice. (Hear, hear.) In the interests of their members, many of whom had held membership in their unions for long years, and in many instances—he might almost say, all instances—had never received any benefits, he contended that they should receive some of the consideration to which they were entitled on account of their risk in being called upon to meet a heavy sacrifice on the one side or upon the other. He hoped that an appeal to the sense of justice in the right quarter would have its proper and due reception. He would like to be allowed one personal note before he sat down. He had been accustomed for so many years to see their dear old friend, Mr. Davies, in the presidential chair now occupied by Mr. Gray, that he felt just a little something missing. He could not sit down without expressing how deeply grateful he felt for the many kindnesses he had shown to him, and to the other officers of the Association during the time he occupied the chair with so much honour and benefit to the Association. They had a new president, and he trusted that he would fill—and he had not the slightest doubt that he would—that honourable position with the same measure of popularity as had been accorded to his predecessor. (Applause.)

"The President."

Mr. F. W. Seeley, in submitting this toast, said he thought the Association was fortunate in being able to command the services of Mr. Gray for President, whose election was warranted by his record of services to the Association. His work in connection with the technical side had been such that they felt certain as president he would fall into the footsteps of their late president. (Applause.) The toast was received with applause and accorded musical honours.

The President, in responding, said it was fourteen years since they had a change of presidents, and it was just six years before he became a member of the Association. The time was too young yet to judge of the wisdom or unwisdom of their action in electing him president. He felt his position was somewhat unique, and therefore anything he might say that night might be used in evidence against him on a future occasion. However, he prided himself in thinking that this position was something he had earned while a member of the Association. He asked them to credit him with sincerity of motive, with courage of conviction, and an earnest desire to raise the dignity of their particular calling, and for the general improvement of all engaged in the printing profession. In the presence of representatives of the workers, and he would like also to have said in the presence of representatives of the employers, he urged closer affinity as a means of securing amicable working and harmonious conditions. He would advocate a triangular board on which this Association should be represented as experts and advisers, and where the human side would be put forward as the best understood by the men. It was not maudling sentiment to recognise the human side in their profession, and he felt the almost insatiable desire for printing contrivances and mechanical appliances had rather tended to make this important factor forgotten. He had always endeavoured to advocate honourable and peaceful working for our trade. Mr. Seeley had touched very kindly on the question of technical instruction for the lads, a subject that appealed to him very deeply, and could only appeal to those who were in touch with and saw the results of the examinations of the lads after they had passed through a course of printing instruction in our technical schools. For four or five years now he had had the privilege of examining the papers the lads produced at the practical tests, and he regretted to say there must be something radically wrong with the training, when lads or budding compositors could not be produced who were more capable of becoming more efficient craftsmen in their trades. It was a very serious matter, and he had tried to do what he could for the betterment of the training, which he hoped would bear fruit. He was grateful to the Council of the Association for permitting him to couple the privilege of occupying that chair with the work he gloried in—doing what he could for the practical instruction of the lads who were passing through the City and Guilds of London Institute. (Applause.)

The Invitation to Liverpool.

The Vice-President (Mr. T. A. Catling) gave the toast of "The Visitors" in appropriate terms, coupled with the names of Mr. J. N. Poole (hon. sec., Liverpool Centre), and Mr. T. E. Naylor.

Mr. Poole responded in a racy and humorous speech which was much appreciated Having apologised for the absence of the President of the Liverpool Centre, he said it was nine years since the Liverpool Centre was formed, and they were the first provincial Centre. He had spoken to Mr. Moyce several years ago of the desirability of holding united meetings occasionally, and Mr. Moyce agreed

Digitized by Google

with him. Since then Birmingham and Manchester had held united meetings, and Liverpool as the oldest provincial Centre now considered it their right to have a united meeting, and so their President had determined that the next united meeting ought to be held at Liverpool, and he had sent him down to boom Liverpool. They had drawn up a provisional programme at their last general meeting, and he would like to put it before them. Mr. Poole then detailed the programme, which begins with a breakfast at the Hanover Hotel, followed by a meet at the Landing Stage for a visit to a liner (the "Mauretania"), limited to 50. Then the visitors would be taken round the sights of Liverpool. There would be an official reception by the Lord Mayor, a river cruise, afterwards high tea at the St. George Hotel, concluding with a musical and social evening. Birmingham, added Mr. Poole, had promised a party of 70, and he asked what was London going to do? Mr. Poole concluded by speaking appreciatively of the cordial reception he had when he came to London last May, and the Liverpool Centre would like to have a chance of paying them back. On behalf of the Birmingham and North Midlands Centres and other visitors he thanked them for their most hospitable and enjoyable entertainment that night. (Applause.)

The L.S.C. Secretary's Diplomacy.

Mr. T. E. NAYLOR, in responding, said it would be a mild way of expressing the pleasure he and his colleagues felt in being with them to say that they were pleased to be there, because although they met them so often, the occasions upon which they met were not so pleasant as that upon which they met that night, and they (their hosts) were not always smiling upon them. He had seen them when they were sad, and he had seen them when they were bland, and he was bound to confess that "The gladness of your gladness and the sadness of your sadness is nothing to your madness when you are mad." Somehow or other they always, in the pursuit of their business, found it necessary to cultivate the good-fellowship of the printers' managers and overseers, and he supposed it arose out of the eternal fitness of things that they should not always be in agreement. He had heard it expressed that the overseer and the management had to hold the scales evenly, if that was possible, between the journeyman on the one side and the employer on the other. (Hear, hear.) They had heard Mr. Bridges that night describe as one of the attributes of a good overseer the spirit of loyalty, and they would pardon him if he claimed that the spirit of loyalty should be, and generally was found to be, exercised not only on behalf of the employer but on behalf of the men in charge of the manager or overseer. He took it that it was the business of a trade union representative—and some of them perhaps might think it strange that he should give expression to such a thought as this; but he held it to be the business, if not an actual duty of a trade union representative, to do his utmost to make it easy for the overseer to work with the union. (Hear, hear.) Many of them he knew personally, and he thought they would agree that the day had gone by when the trade union representative was to be left outside as a person who ought not to be consulted on any occasion. He was bound to say that in the printing trade, at least, they who represented the men almost invariably found that the printers' overseer was as accessible as they could wish to find him. Right through London, when their business took them first to one office and then to another, it had been his experience, and he thought he could speak for others there that night, that the printers' overseer was always willing to listen to reason. But it did sometimes happen that their opinion of what reason is was sometimes found to differ. (Laughter.) What was reasonable to one side might conceivably come to be unreasonable to the other. When that happened it was necessary, of course, for those who had it to exercise a little diplomacy. That was one of the qualities that he had never yet educated himself up to. (Laughter.) He thought he was proving that in his speech that night. Before he sat down he felt sure they would endorse his opinion, but he had not finished yet. If he might be allowed—although he felt he was taking advantage of a toast that did not admit of any general remarks, but as Mr. Moyce had referred to one matter as being a question of great importance to them as overseers and managers, and as a question upon which they could not consent to any compromise, he would like to be allowed to say this: If that question was to come before the different unions now comprising the Printers' Federation it would not be dismissed without due consideration. (Applause.) He for one had always realised, with the trade unions in the printing industry, the importance of maintaining within their ranks the men who held the positions that they held. He did not believe in taking up an attitude that might at any time tend to sever men in their position from their unions, and he was and had been never prouder than when he was able to point to the fact that this Association had for its chief officers members of the London Society of Compositors. That being so, he thought it behoved them, realising what an asset to their societies overseers and managers really were, to pay every attention and the utmost consideration to representations on such a question as that presented by Mr. Moyce. (Hear, hear.) Now they would understand, after what he had said, just what he thought upon that question, but do not, at their next business meeting, let it be said that Mr. Naylor, secretary of the L.S.C., in a weak moment after dinner, when he was not quite so staid as he might be on other occasions, had actually admitted that whether an overseer was a member of the union or not he was entitled to give and receive a month's notice. They would observe, although he had in a way expressed his opinion of the consideration that they should give to the question, he had not yet let them into the secret as to what his personal view was upon the matter. (Laughter.) That was where diplomacy came in. Concluding, Mr. Naylor expressed the hope that their invitation to the trade union representatives year after year meant a continuation of the friendship that ought to exist, and which he claimed had existed between their Association and the printing trade unions of London. They had much in common. A man who was an overseer was not necessarily a being apart from the workman he employed, and a proper understanding of the element of human nature that was in each and all of them, whether they were employer, manager, overseer, or journeyman, helped them to appreciate each other's difficulties, and should inspire them with a desire to understand one another's position. If they brought themselves to the point of understanding each other's position he thought that was taking them a long way towards a common agreement upon the various matters that came between them.

Mr. R. J. DAVIES (ex-president), in a happy little speech, gave expression to the gratefulness he felt to all for their kind expressions of opinion. He said he felt now very much like an old comp.: when in the presidential chair he was always on piece work, but now he was on 'stab. (Laughter.) But as far as the Association business was concerned, they would always find him on piece. He concluded by asking the members to continue their loyalty to the new occupant of the chair.

The last toast was that of "The Stewards," submitted in eulogistic terms by Mr. J. PUGH, and responded to by Mr. H. W. JACKSON.

The proceedings terminated with the singing of "Auld Lang Syne."

MANCHESTER AND DISTRICT CENTRE.

The ninth annual dinner was held at the Exchange Hotel, Fennel-street, Manchester, and proved a great social success, the dinner being well served under the careful eye of Mr. A. Frey, the manager. Everyone who was present at the luncheon of the opening day of the North of England Printing Exhibition in April, 1912, had nothing but praise for Mr. Frey, and so it gave the Manchester Centre faith in holding their dinner this year at the Exchange Hotel. Amongst those present we noted Mr. Thos. Kirkwood, president; Mr. F. Burnett, vice-president; Mr. H. C. Critten, trustee; Mr. Jas. E. Mayo, treasurer; Mr. H. R. Caldwell and Mr. J. E. Wilson (Liverpool Centre); Mr. J. Albinson (Oldham), Mr. J. H. Burton (Eccles), Mr. and Mrs. A. Bartlett (Hale), Mr. and Mrs. Clark (Ashton-on-Mersey), Mr. Geo. H. Clough (Rochdale), Mr. and Mrs. W. E. Dalby (Fallowfield), Mr. W. G. Gane, Mr. and Mrs. A. Gavin (Reddish), Mr. W. Goulding (Moston), Mr. F. O. Hoole (Rochdale), Mr. and Mrs. Ed. McVay, Mr. J. McCosh (Trafford Park), Mr. and Mrs. J. H. Nuttall (Chorlton-cum-Hardy), Mr. T. Rignall (Old Trafford), Mr. R. F. Singleton (Stockport), Mr. G. E. Shearsmith (Chorlton-cum-Hardy), Mr. Thos. Sproat (general secretary, Lithographers' Union) and Mrs. Sproat, Mr. and Mrs. Wm. Teer and Miss Teer (Levenshulme), Mr. and Mrs. Thos. L. Whitehead (Bury), Mr. and Mrs. D. Wain (Hyde), Mr. R. Calverley, Miss M. Harding, Mr. H. Jones, Mr. S. York, Miss K. Mancer, Mr. W. Mancer, Mr. T. Borthwick, Mr. H. Robertson, Professor Cross, Miss Timperley, Mrs. Thompson, Mr. S. Cash (Messrs. E. Hulton and Co., Ltd.), Mr. W. C. Foster (*British and Colonial Printer and Stationer*), and Mr. F. J. Hughes, hon. secretary, and others.

After the removal of the cloth the White Coons opened the musical proceedings, and then the PRESIDENT gave "The King," in eulogistic terms, the toast being acknowledged with musical honours.

The HON. SECRETARY read apologies from other Centres and friends, and telegrams from the Parent Centre and the Edinburgh Centre who were holding their dinners on the same evening.

Vice-President F. BURNETT gave "The Printers' Managers and Overseers Association," and said Manchester was always pleased to welcome those from the sister Centres, and he trusted Messrs. H. R. Caldwell and J. E. Wilson would go back to Liverpool with happy recollections of their short stay in Manchester. Their presence showed good feeling and brotherhood existing amongst Centres and that was one of the mainstays of the Association. He hoped the United Meeting in Liverpool on June 21st would be another knot in the bond of friendship. The Association was rapidly growing, two Centres having been formed during the past twelve months. The Provincial Centres were anxious to have some say in the management of the Association, and the suggestion that representatives be drawn from all Centres was a good one, which he hoped in the near future would be realised and bear good fruit. The Birmingham resolution of one representative for every 50 or part of 50 members was a reasonable one, as too bulky a representation might be cumbersome from a financial and other points of view. The representatives might meet twice a year or at such other times as circumstances might require. The National Council could attend to the interworking of Centres, fixing up particulars of the annual united gathering, general expenses, etc. It would be a more practical, business-like and broad minded body, as each Centre would be able to choose the most efficient worker for its representative. One important question that had been dealt with during the past twelve months was that of trade custom, and the meeting held in London with the National Printing Federation showed that both sides were anxious to work amicably together. The one fault he found with the Parent Centre was that they appealed to the Trade Federation which was made up of some two dozen societies, whereas the P. M. and O. A. only directly touched two of them, namely, the Letterpress and the Lithographic. Had there been a joint meeting of the Masters' Federation, the two unions before-named and the P. M. and O. A., he believed the question of trade custom would have been settled. However, according to the report of the Parent Centre in the present issue of the *British and Colonial Printer and Stationer*, he found that a further consideration of the matter was requested. He hoped those who had it in hand would not forget the motto, *Audi Alteram Partem* (hear the other side), but also let them hear the P. M. and O. A. side of the question in a definite and persuasive manner.

Mr. H. R. CALDWELL, in replying, thanked the Manchester Centre for their hospitality. He felt it an honour to be chosen as the representative of the First Provincial Centre. There was a great amount of enthusiasm amongst Liverpool members to make sure that the united gathering on June 21st would be equal, if not better, than those held previously in other Centres. The temporary arrangements were sight-seeing 8.30 to 10 a.m., a limited number to visit the Mauretania at 10.30, a civic reception at one o'clock, a channel cruise, a good tea and concert at Hotel St. George in the evening. He laid great stress upon the date, because it was the individual whose presence was required to make the outing a success.

Mr. J. E. WILSON said it was his first official visit to Manchester, and his reception had been so warm and enthusiastic that whether chosen or not he would come again and bring with him his good lady.

Owing to unforeseen circumstances ex-President Richard Bates was unable to give "The Printing Trade," and the hon. secretary was called upon to fill the gap. In his remarks he said there was nothing startling to record, as the disturbing influences of the past twelve months had not been of a record nature and employment had been fairly good all round. The system of costing which was spreading from that great and mighty land across the herring pond had caught on with the British master printer, and discussions were taking place in different parts of the country. In London at the close of 1912 there was an echo of the 1911 strike, a responsible Government official deciding that 50 hours per week should be recognised for work done for the nation, some 60,000 people being affected by this decision. About July the Copyright Law was favourably settled. As to type and spacing material an advance in price was the chief feature. Rotary intaglio printing had entered the field of competition, and the work shown in the pages of some of the illustrated weekly publications was very pleasing. The Factory Act regulations had been more carefully attended to as regards fencing of machinery, cleaner work-rooms,

Digitized by Google

and better sanitary conditions for the employees.

Mr. Thos. Sproat replying, first had a tilt at his own kinsman, the Laird of Galashiels, for not having the courage to appear in the Garb of Old Gaul. Mr. Hughes, before coupling the speaker's name with the toast, had remarked that 50 hours was recognised in London by the Government, but that only referred to the letterpress section. Unfortunately the lithographers, who had tender and sympathetic hearts, had helped the masters all they possibly could, and found that their sympathies on the question of overtime were now demanded by the masters, and therefore trouble was being caused. The litho was having none of it, and he wished to be on the same footing as his letterpress brother. In Scotland, he was sorry to say, all was not working smoothly, and had not been for some time, but he hoped and trusted all the disputes would be settled by wise and peaceable counsels. The development of machinery displaced labour, and although they did not kindly take to it when introduced, yet after a time it usually added to the numbers employed. When machines were producing at something like 9,000 copies per hour compared with the 500 or 1,000 previously it was bound to affect the workers until the demand was greater. Only the other day in Manchester he came across a letterpress master printer who in all earnestness said he had an apprentice running four machines. A man was running five machines, and when asked why he left his last place was it because his employer wanted him to run seven machines. Well might it be said that the letterpress man put his plates on a shutter and went home to bed, knowing the work would be done by the time he got back next morning. In the litho trade he had always found one machine was quite enough for any man. He looked on the letterpress and lithographic as indivisible trades, and it was the employers, managers and overseers who could do much for both. When block printing came into vogue everyone said the litho trade was going to the dogs. When three-colour work came it was certain death to the litho. Offset printing had during the last few years come forward and set the lithographer upon his feet again. To show his idea of inter-relationship, there were many catalogue borders that might easily be litho'd and then the letterpress man would print in his work, thereby one helping the other. A fair number of employers expected good results from old crocks of machines that had done service in their father's days, forgetting that new machines were perfected for producing better work, and that the letterpress and lithographic printers were creatures of circumstances. Vice-President Burnett had touched upon the topic of trade custom, saying that the appeal should have been made only to the letterpress and lithographic union. The National Federation was composed of many societies and no decision could be arrived at without consulting the whole. The question had been favourably received, the voting being somewhere near equal. The P. M. and O. A. should generally recognise the difficulty of the subject. In times of stress it may be better for the manager or overseer to be in the works, and it may be otherwise, as the employer would have a greater help by the manager or overseer being able to organise the new staff. Under normal conditions they were willing to recognise the month's notice. If it was necessary to proceed further he was afraid he could not do any other than say they must take the question in hand themselves. If the custom was acknowledged under all circumstances it might be of interest to managers and overseers, and it might not be detrimental to the union members. Of course, it had to be proved. He thanked the Manchester Centre for their hospitality to himself and good lady and wished every success to the P. M. and O. A.

Mr. Ed. McVay gave "The Ladies and Artistes," and Musical Director, Mr. Wm. Teer, briefly acknowledged. "The Finger of Time" pointed to the parting hour, and the company rose and sang "God Save the King," afterwards each dispersing to their respective homes, vowing that the dinner and concert had been one of the best held under the auspices of the Manchester Centre.

In the afternoon a party of visitors inspected the mammoth publishing works of Messrs. E. Hulton and Co., Ltd. The firm is recognised as the most progressive outside the capital, and when we state that the capacity of the newspaper printing room is capable of producing 1,248,000 copies of an eight-page newspaper per hour, the people in the hub of the universe, and other centres can form some slight idea of this North of England house. They possess all the latest saving devices for the economical production of all classes of letterpress work, and no expense is spared to keep the business in the front rank of the printing trade.

P.S.—May we add a note that we do not think it "business management" to hold so many Centre dinners on one day. There would be a better opportunity of mixing together and extending the bond of good fellowship if each Centre avoided fixing its annual function on the same day as another.

Wee Macgreegor.

YORKSHIRE CENTRE.

The sixth annual meeting of this Centre was held at headquarters, the chair being occupied by Mr. J. H. Ellis, in the absence of the President through his long-continued illness.

The following is the Report of the Council for the year 1912:—

"To the Members of the Yorkshire Centre of the P. M. and O. A.

"Gentlemen,—In presenting the Sixth Annual Report and Balance Sheet, the Council have, for the first time, to report a decrease in the membership. Commencing the year with 76 members, five have been transferred to other Centres, one member has died, and three lapsed through non-payment; six new members have been elected; the membership, therefore, now stands at 73.

"Balance Sheet.—The balance to the credit of the Centre on December 31st was £2 10s. 1d.

"Social.—The meetings during the past year have been kept up to the usual high standard, but the Council regret to report that the attendance at some of the meetings has been far from satisfactory."

The Report then details the several functions.

"Death Benefit.—During the year the Centre has lost one member by death, Mr. H. Emmott, of Bradford. The full benefit of £50 was paid to his widow.

"Acknowledgments. — The best thanks of the Centre are due to Mr. J. W. Worthington, Mr. J. H. Reed, Mr. Jas. Trotter, Mr. G. W. Hughes, of the Birmingham Centre, and Mr D. Greenhill, of the Parent Association, for their excellent lectures during the year; to Messrs. Pawson, Pullan, Lister, Gascoigne, and others, for the assistance given at the Annual Dinner and Smoking Concerts; to the Council and Members of the Manchester Centre, for the excellent arrangements made for the combined visit of all Centres to Manchester.

"There have been eight meetings of Council, and a record of attendances is published below. Messrs. Benson, Dixon, Hogg and Norrie retire according to rule, and are not eligible for re-election.

	Possible.	Actual.		Possible.	Actual.
H. Walkington	8	2	V. S. Blakey ...	8	8
J. H. Ellis	8	8	W. H. Crowther	8	6
J. H. Singleton	8	6	H Dixon	8	8
J. Thackrah ...	8	7	J. W. Gibbon ...	8	4
G. W. Wilkinson	8	6	F. W. Hogg ...	8	5
W. H. Dalby ...	8	8	E. Norrie ...	8	5
A. Pickard ...	7	7	H. Ruddock ...	8	7
R. Benson ...	8	6			

"The Council regret that, owing to ill-health, our President has been unable to take an active part in Association matters since the early part of the year. It is hoped that the coming year will see him fully restored to health, and able to take up his position again. His interest in the business of the Centre is as keen as ever, and his advice on Association matters, although he has been unable to attend meetings, is very much appreciated by the Council."

The report concludes with an expression of disappointment with the few nominations for membership received during 1912, and asks for the energetic support of members during the coming year to remedy this defect.

The auditors, Messrs. Briggs and Chadwick, having resported that they had examined the accounts of the Association and found everything satisfactory, the balance-sheet was adopted on a resolution proposed by Mr. L. C. Mennell, and seconded by Mr. A. Briggs.

In accordance with the resolution passed at the December meeting, two vice-presidents were elected to act alternately in the absence of the President, whose continued illness was sympathetically alluded to. Messrs. Benson and Dixon having been nominated for the position were unanimously elected.

The remainder of the officers remaining as before, a ballot was taken for the four vacancies on the Council, and the following were duly elected out of nine nominations:—Mr. J. H. Dews, Valley Printing Works, Cleckheaton; Mr. R. F. Dickson, Beck and Inchbold, Ltd., Leeds; Mr. J. H. Ellis, Alf Cooke, Ltd., Leeds; and Mr. L. C. Mennell, Chorley and Pickersgill, Ltd., Leeds.

A hearty vote of thanks having been passed to the auditors and the retiring officers and the newly-elected members of the Council having thanked the meeting for their election, the meeting was brought to a close.

The sixth annual dinner of the Centre is fixed for March 1st at headquarters. Professor Sadler, vice-Chancellor of the Leeds University, has signified his acceptance of the Council's invitation to attend, and an excellent entertainment is being arranged by the dinner committee.

The *Chamber of Commerce Journal* says that Mexico offers a good opening for picture post cards. There is no local production, and the sale of these goods is fairly important. Offers by correspondence do not appear to have given good results, and it would be preferable to have a representative on the spot.

For Destroying Private Documents.

A Paper Macerating Machine and Other Useful Appliances.

In banks, insurance offices, and other commercial establishments, one of the difficulties that has to be contended with is how to get rid of important or confidential papers when they have served their purpose and are no longer wanted, for, often, to allow such to fall into the hands of outsiders might lead to considerable complications if not to actual frauds on the business whose private transactions might thus be divulged. At present a considerable quantity of business books, confidential documents, etc., are handed over to the waste paper dealer under the charge of secrecy, but how this secrecy is to be kept when the material is given into the hands of employees to destroy is another matter, and so business houses should welcome the appliance that has been introduced by the Canadian-American Machinery Co., Ltd., 8, Bouverie-street, E.C., under the title of "Macerating Machine." This is a reliable appliance for destroying cheques, business books, documents, railway tickets, or in fact anything in the way of business papers, and converting them into paper shavings, such as is known as "Excelsior" and used for packing purposes. Different sizes are made, the numbers 3 and 4 styles being suitable for the business office. They are constructed with rotary cutters and can be set up in any auditor's department, occupying only a space of 22 by 32 inches. An office boy or girl can operate them, no experienced hand being required. A table is attached to the machine from which the operator feeds the paper into the hopper and the cut product is delivered into a box or other receptacle, or a motor can be attached and driven from connection with an electric light fixture. The machine can also be run by hand by attaching a handle to the balance wheel. The larger sizes, numbers 1 and 2, are intended for the use of paper-makers, and will cut up large quantities of waste paper for reducing to pulp. In these Macerating Machines the cutters are made of the best tempered steel, and will cut binding wire, so that in the case of books it is only necessary to tear off the covers and feed in the pages in sections. The number 1 machine is capable of dealing with 2,000 lbs. of waste paper per day, and the number 4 about 250 lbs., the prices ranging from £125 to £30. The appliances are wonderfully compact and take up but little floor space.

In connection with the use of these paper destroyers we may again call attention to the All-Steel Baling Press that is supplied by the Canadian-American Machinery Co., Ltd., by the use of which waste paper can be stored and baled with a minimum of fire risk, and with cleanliness and economy. The waste from the Macerating Machines can be well pressed and packed in these balers whose good qualities we have before pointed out to our readers, and that they are appreciated by users is evidenced by the many testimonials that are received. Thus Messrs. Hughes and Harber, Ltd., write:—"The Steel Baler you recently supplied to us is one of the most useful and time-saving devices we have ever purchased. The machine is cleverly designed, strongly built, and its holding capacity marvellous, although it takes up so little space. By its use all litter is avoided, fire risks are reduced to a minimum, and its numerous advantages over the old and clumsy method of bagging paper are at once apparent. We are very pleased indeed with the Baler which we thoroughly recommend." And another testimonial is given by Messrs. Unwin Brothers, Ltd., who say:—"We are pleased to be able to say that the "All-Steel Baler" which you delivered to us a little while back, is giving great satisfaction. We find a saving of labour in the actual baling, and a great saving of space which the waste now occupies. There is also less liability of the waste catching fire, being in such tight bales as against large bags, never at the best of times very tightly packed. We also make a substantial saving on account of the reduced rate which the railway company charge us for the carriage, a truck containing quite double the quantity that it used to contain when the paper was simply in bags. We are exceedingly pleased with it, and shall be glad to testify to its usefulness and economy to any would-be purchaser that you care to refer to us." Such recommendation is gratifying and shows that the Balers are giving every satisfaction.

Another machine that is handled by the Canadian-American Machinery Co., Ltd., is the "Spiess Sheet-Sorting Apparatus that is designed to select the best sheets from a pile of paper and to reject those that have any damages, specks or other defects on them. This appliance is particularly suited for paper

Digitized by Google

mills for sorting out the sheets and selecting the perfect ones for making up in reams. It does away with the necessity for employing a number of girls on the work, feeds automatically, piles up the selected sheets, and turns the faulty ones out. It has a speed of from 2,700 to 3,000 sheets per hour, and can be attended by one girl.

The firm also offer a bag-making machine that makes a powder-proof bag at a speed of from 60,000 to 80,000 bags per day.

Particulars and prices of all the foregoing machines may be had from the Canadian-American Co., Ltd., on application.

Finishing Paper, Cardboard, etc.

Improvements in finishing paper, cardboard, pasteboard, etc., form the subject of a patent granted to Messrs. H. B. and H. S. Toone, of the firm of Messrs. A. S. Toone and Sons, Radford, Nottingham. The object is to save time, produce a better face, and to obtain a superior article with a less expenditure.

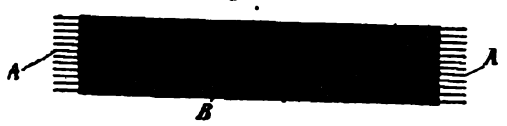

Fig. 1 is an elevation showing a series of sheets of paper, cardboard, pasteboard, and the like arranged in the form of a wad, with finishing plates introduced between each so as to finish them on both sides according to the present invention; Fig. 2 is an elevation with finishing plates introduced between every other sheet so as to finish them on one side only.

Pasteboard, for example, which is produced by pasting a series of layers of papers together, is finished without loss of time, by placing it

Fig. 1.

Fig. 2.

as soon as the pasting process is completed, between finishing plates preferably comprised of metal having smooth or polished faces, then placing them under pressure in a press which can be heated by steam or other convenient means, and leaving them subject to pressure and heat for the requisite length of time. The action of the heat converts the moisture into vapour, which permeates the whole of the pasteboard, and causes the layers of the latter to make a perfect contact with each other, and the outer faces to make perfect contact with the faces of the finishing plates, so that the smooth faces of the latter are transmitted to the boards.

The finishing plates may be formed of incorrodible metal, or be plated with an incorrodible metal. Of the more common and inexpensive metals, nickel is found to be the most suitable for the purpose, as it is unaffected to any material extent by the moisture in the boards, or that given off therefrom in the form of vapour, in the process described.

According to the patentees, their process takes the place of the independent processes of drying and pressing, and the subsequent process of rolling or calendering, which is necessary when it is desired to give a smooth face to the boards. The time expended in drying and the labour entailed in rolling are both saved, the boards are therefore finished much quicker, and more economically, as the expense attendant on rolling is saved. The amount of paste required to cause the layers of paper to adhere is much reduced. A more perfect face is at the same time put on the boards, and they are not reduced in thickness as is the case with the process of rolling. The boards may be pressed in wads, that is to say, a series of them super-imposed as is usual, and if a face is required on both sides of each board, a finishing plate A is introduced between each board B, as shown in Fig. 1. If a face is only required on one side of each board B, it is only necessary to introduce a finishing plate A between every two boards B, as shown in Fig. 2.

Paper or board is pressed between the finishing plates in a heated press, either before it has become dry, or if dry, it is damped and subsequently treated as described. The process is specially applicable for finishing pulp and other classes of board, which are faced with paper, and it gives a much superior finish to this class of goods. The paper face is pasted upon the Board, either on one or both sides, and it is then in a wet state, placed between the finishing plates and subjected to pressure and heat. The process takes all the irregularities and creases out of the facing paper, and brings it into perfect contact with the board, it also removes the roughness or grain from the pulp board, which would under ordinary circumstances show clearly through the facing paper. The result is that a faced board with a perfectly dead smooth face is obtained, when using inferior pulp board, and common facing paper. The process of producing such board is greatly facilitated, the process of damping the boards and paper is unnecessary, the amount of paste required is less, and the process of drying is accelerated.

The faced boards may be treated in wads as previously mentioned, the finishing plates being introduced between every board when they are faced on both sides, and between every two boards when they are to be faced on one side only.

AMERICAN

Imports and Exports of Paper, etc.

The imports of paper, etc., into the United States, and exports therefrom, during the periods mentioned, were of the following values:—

Imports.

Canada's Trade with Australia.

A Retrograde Movement.

That imports of Canadian printing paper into Australia are declining is shown in a report received by the Government from Mr. D. H. Ross, Canadian Trade Commissioner at Melbourne, a part of which runs as follows:—

"Trade returns disclose the fact that Canadian printing paper is not maintaining the position held by it in recent years in the Australian market. The reason is donbtless capable of explanation, but the cause of dimimishing values is hard to define in view of the expansion of the industry. More profitable domestic business and the demand in markets where there may be less competition than in Australia are likely factors in the result arrived at. Several of the largest Canadian paper mills have experienced and capable representation in Australia, and the decline cannot be attributed to any disadvantage in that respect. As printing paper is duty free the competition is upon an equal footing, but Continental shippers obtain a more favourable freight rate. The imports from Norway and Sweden increased from £75,618 in 1909 to £120,444 in 1911, while the imports from Canada in the same period declined by £2,896, although the total imports expanded by £137,017."

Mr. Ross then gives a table showing that the imports of Canadian news print into Australia in 1909 equalled £136,099, as compared with £133,203 in 1911. From the United States the imports in the same period advanced from £98,343 to £106,611.

"The detailed schedules," he says, "should impress manufacturers not only with the extent of the Australian requirements of paper of all kinds, but also (excluding printing paper) with the comparatively small benefit Canada derives from this constantly increasing trade. Canadian paper boards are being introduced, and while the figures are yet diminutive the outlook for increased returns is promising. Wrapping paper to the value of over £170,000 was imported in 1911, of which Sweden, Germany and Norway contributed to the extent of £150,000, and Canada £206 only. Some manufacturers of wrapping and cartridge papers have recently received from this office samples and particulars concerning competitive prices, which is encouraging evidence of interest being aroused in the trade."

The American Paper Trade.

The Views of Mr. Arthur C. Hastings.

Mr. Arthur C. Hastings, president of the American Pulp and Paper Association, says:—"The paper industry of the United States represents an investment of some $400,000,000, with an annual business of some $300,000,000, comprising an output of nearly 800 establishments located in thirty-two States, employing some 80,000 people. At least 85 per cent. of the production of these mills is of a quality of paper that could be imported into this country, being of a value of not over 4 cents a pound at point of shipment, thereby coming in free under the value requirements of Section 2 of the so-called Reciprocity Act. The importation of paper and pulp during the years that we have knowledge of has constantly increased under the duties that have prevailed, and to such an extent that it has been a detriment to the manufacturers of this country, and whom it has menaced most seriously under Section 2 of the Reciprocity Act, first because it has not only thrown open our doors to our greatest competitor—Canada—for her surplus production, but we are in great danger from other nations which are claiming the same privilege. This would flood our market to such an extent (through the lower cost of production) that many of our mills would positively be forced out of business and some would have to curtail their operations to the extent of showing an actual loss in operation."

Applications.

2,056 EMETT, A., pencil holders for diaries, pocket books, and other books and wallets, purses and the like.
2,075 SPIESS, G., paper sheet feeding or like machines.
2,077 MACMASTER, P., renewable leaf book.
2,124 PETERMANN, O., typewriting machines.
2,133 WOOD, C. H., binders and covers for loose-leaf books.
2,134 ELLIS, R., mechanism for displaying, indexing and controlling travelling bands for advertisements and the like.
2,148 SAMPSON, C. H., printing machines.
2,174 SCHMIDT, F. L., envelope machines.
2,240 WATKINS, A. H., fountain pens.
2,274 HOFFMAN, F. C. and F. E., envelope-closing and stamp-affixing machines.
2,299 WEINBACHER, J. G., fountain or stylographic pen.
2,304 BLACKMORE, P. R., mounts for printers' and like blocks.
2,317 WRAY, O. J. P., and JACKSON, C., rollers for printing or lithographing machines or for the like or other purposes.
2,379 LAKE, W. E., sheet delivery mechanism for printing machines.
2,384 SAVAGE, B., note-books and the like.
2,389 HIME, W. W., paper-binder applicable also for use in ledgers of the loose-leaf type.
2,404 LAKE, W. E., inking mechanism for printing presses.
2,427 NORRIS, T. G., envelope for use of printers, stationers, manufacturers and others.
2,500 COGSWELL, A. G., machines for detaching pieces of paper or card, such as postage stamps and tickets from a perforated strip.
2,517 WILLIAMS, H. B., and JACKSON, J. A., captive holder for pencils, penholders and the like.
2,523 FURNIVAL, H. S. and F. S., guillotine cutting machines.
2,549 LINOTYPE AND MACHINERY, LTD., and PARKER, T. R G., offset printing from intaglio surfaces and presses therefor.
2,550 LINOTYPE AND MACHINERY, LTD., and PARKER, T. R. G., offset printing from intaglio surfaces and presses therefor.
2,551 LINOTYPE AND MACHINERY, LTD., and PARKER, T. R. G, printing and presses therefor.
2,552 LINOTYPE AND MACHINERY, LTD., typographical composing machines.
2,568 MARSH, N. J., and SARVER, A., postage stamp perforating.
2,592 STRAKER, H., loose-leaf books.
2,609 HEADLEY BROS., and HEADLEY, B. H., inking roller shield for printing machines.
2,613 MILLER, H. C., loose-leaf binders.
2,621 BRAIN, H. E, perpetual calendar.
2,622 E. T. W. DENNIS AND SONS, LTD., process of photographic and lithographic printing.
2,662 BILLING, F., LANCASTER, M. L. and A. L., paper bags, cartons and like containers and the manufacture of same.
2,694 KUHRUBER, F. C., binders or loose-leaf holders.
2,702 SCHERBEL, W., fountain pens.
2,709 BIRKBECK, H., postal envelopes, wrappers, lettercards, or like postal articles.

About Calf Leather.

Its Treatment for Bookbinding.

Dr. J. Gordon Parker, of the London Leather Industries Laboratory, Bermondsey, is lecturing on skins at the L.C.C. Central School of Arts and Crafts, in Southampton-row, W.C., and one of his discourses, on February 5th, had reference to calf leather used for bookbinding and other purposes. Needless to say, the subject is of great interest, not only to those engaged in the tanning industry, but to bookbinders, and the lecturer has a very happy way of riveting the attention of students and practical workers in the general outlines he conveys on the treatment of skins. To make the lectures more interesting limelight views and samples are introduced, and on the latter some practical and theoretical hints are given by Dr. Parker in a very lucid manner.

* * *

Early in January Dr. Parker described the first treatment of the rough manufacture of calf leather and he showed how the process was carried out, dealing with the skins and the various treatment they have to go through, viz., the removal of the hair, etc., and the usual process of tanning. His lecture on February 5th concerned the transforming of the skin into material suitable for bookbinding and for general purposes.

"Here is a sample of calf skin," said Dr. Parker, holding up a sort of tanned material, "practically just the same as it comes out of the tanner's pit. It has been stretched, shaped, and thinned down a bit, but if anything of that sort was supplied the bookbinder, I am afraid he would not look upon it as a suitable raw material."

The sample, as a matter of fact, bore marks of the wrinkles that were on the calf's neck and there were a certain amount of irregularities of colouring which were not all of the same shade. These faults, the lecturer explained, were due to the tanner being unable to get all the same shade owing probably to dirt being retained in the skin and other difficulties. Before the skin became suitable, for say bookbinding purposes, he added, it must be treated in some way in order that the skin might be dyed all the same colour, and, also, it must be treated in such a way that all irregularities might be removed.

Turning to other samples, Dr. Parker selected one similar to the first skin and said it had received a colour of reddish oak. It was tanned with different tanning material and it produced leather quite different in feel and quite different in colouring, showing that a purchaser would have the full substance of the fully tanned calf skin. By a secondary treatment a different material was again produced. Dr. Parker displayed a sort of dark cream skin and said it had been shaved down and then treated to a second change in order to produce a perfectly level bottom—that is a perfectly level foundation on which the tanner can afterwards work to produce any special shade of colouring or any special leather he may require. A century ago, or perhaps less, there was no doubt no methods were known by which they could remove all these inequalities—no methods known by which they could get the skin to a regular even shade of colouring; also, undoubtedly leather was not manufactured as it was to-day. That was to say, the leather was tanned in the olden days, but after the tanning process to-day there was re-manufacture after the material had left the tanner's pit, and it was in this re-manufacturing process that instead of increasing the wearing properties of the leather, the re-manufacturing only improved its appearance and proved detrimental to the wearing powers of the leather.

Dr. Parker pointed to a skin that had been thinned down by shaving and he mentioned that the first process it would have to go through would be to get the excessive tanning out, then stretched on a table, or either by hand, or machine "set-out." The "set-out" process consisted of stretching the skin and laying the fibres level. Grease was then taken out and a certain amount of inequalities were removed. In some cases it was necessary to get the grease out of the skin. The more fat the animal was, the more natural fat there was in the leather and grease was a disadvantage from the finisher's point of view, because, when there was a considerable amount of grease the dye would not take and the result was an irregular dyed skin unsuitable for most purposes. He was afraid, added the lecturer, this process had done harm to leather generally, viz., the process of degreasing leather. The process was: The skin was hung up in a chamber and petrol or benzine allowed to trickle on it carrying away the grease.

* * *

"There is one point I want to make clear," observed Dr. Parker, "and that is—a skin without grease has no strength, and you cannot get strong animal fibres unless there is grease in those fibres." After dealing with the tanning process and the effect of sumach, the lecturer pointed out that sumach was one of the finest tanning materials. Incidentally he also mentioned that unless the skin was dried in a stretched condition the fibres were liable to recontract and then wrinkles reappeared.

Turning to samples dyed in maroon, yellow, etc., shades sold in London to-day, Dr. Parker said that only the grain of the skin was left on when they were dyed. "Now," he added, "you have probably heard a great deal about skins or bindings repeatedly decaying. The fault of that decay is in the fault of the dye; it is due to the application of it. In the olden days the dye of leather was carried out very largely with wood extracts, extracts of berries, leaves, or barks, but it was always a difficult matter supposing you wanted to dye 10,000 calf a nice dark red colour for some specific purpose and a special shade of red was made and then the lot sold. "Then supposing," observed the lecturer, "you were asked to dye another shade of the same colour. It would be a most difficult thing to repeat. But civilisation and education have altered things. Men get a sample the size of a postage stamp now and are asked to match it. In the early seventies the first aniline dyes began to be produced in larger quantities and two kinds of dye were put on the market—both made from aniline compounds. If you take any special library like the British Museum, and obtain old volumes, you will find the leather made before 1870 is good, and the leather subsequent to that period gone into red decay. The leather in the latter, in nine cases out of ten, is gone through the introduction of mineral acids. It was thought that if you threw skins into water that you could wash out the acids, but it has been proved beyond all possible doubt that if you add mineral acids that the actual fibres of the skin absorb them and the skin will not give them up again."

"No one," added Dr. Parker, "should buy book-binding leather unless the leather is guaranteed to be prepared without the use of mineral acids. Then you are absolutely safe. Of course it depends on the man you are dealing with—if you deal with a good firm you get the guarantee."

Applying the dyes to the skins was the next point raised by Dr. Parker, one system being the use of the tray, another what is known as the brush dye, and a third a system by which the skins are placed in a drum with a certain amount of warm water and the dye added and the skins turned round and round, etc., until sufficiently dyed. Some skins, he mentioned, were more open in the pores than others, the result being that the former took the dye better than the latter. When a skin comes out of a dye bath it is dull and has no face on it—the dye is not fixed on it. The fixing was done in a process which came under the heading of finishing. The skins were seasoned, said the lecturer, and the seasoning process consisted of coating them over with a sustance which helped to protect the skin and keep the dye stuff fixed. After this protected coating was formed above the dye, the glazing took place.

* * *

After outlining in the minutest details the various processes through which the skin passed, Dr. Parker showed lantern slides of some of the modern machinery in the factories to-day. The setting out of a skin is now done very largely by a machine instead of by hand. The result is that it is well stretched and becomes perfectly level. There was also a machine for brushing out and washing out any of the excessive tanning not wanted in a skin.

An interesting illustration was the process of shaving. It showed an operator working with a double-bladed knife, a scene common to many who have by chance visited a tannery, knocking off the shavings. The modern system is carried out by the use of a machine on which there is a spiral roller, and as the skin advances to it the shavings are cut off. Then there is a machine for splitting the skin—an invention that has revolutionised the leather trade. One can regulate the exact thickness a skin is to be split. The machine for glazing is another wonderful appliance. When the skin is seasoned it is dealt with by the glazing machine, and by being moved about the polish is effected.

A unique machine is that used for embossing. Dr. Parker showed an illustration of it, and by its use sheep skins can be transformed into the appearance of alligator or lizard skins.

Samples of velvet leather next engaged the attention of the lecturer, and he incidentally remarked that it was now in fashion for the time being, and how long it would remain so no one knew. Velvet leather, he said, was simply the same tanning, the same everything, absolutely the same treatment it received as what he had described, except as regarded the grain, which was taken off by a fine buffing, leaving the nap underneath in order to produce that soft velvety finish.

* * *

An interesting demonstration was given by Dr. Parker towards the conclusion of the lecture. He said that he had been asked to give an idea of some tests by which one could, to a certain extent, examine leather prior to use. Now he could assure his audience that was a difficult problem, viz., the examining of leather, and to know what one was going to get out of it. They could by a certain simple test that was known to everybody test the strength of the leather. He did not believe in the test of tearing the skin—

Digitized by Google

that was foolish. They could tell whether leather was tough, or not, by taking the back of a gentleman's pocket knife and putting it underneath the skin. The skin should then be pulled firmly over it and efforts made to see if it could be cracked. If the leather could stand that after a good stiff pull it may be assumed that the leather had not been spoiled in manufacture, or treated with any substance. The test could guide one as to whether the leather was tender or tough.

With regard to the presence of mineral acids in leather, he was sorry to say there was no method for testing, except by careful chemical testing. That was about the best way of finding acids in leather; but one must have the apparatus.

Dr. Parker did not appear to like alum being used in the tanning. Alum, he said, was not a tanning process; besides alum did not stand damp.

"Is salammoniac detrimental to leather?" enquired a student.

"I don't see that it should be of any harm to the leather," replied the lecturer; "but it is not a good thing to use in solutions. It may darken the colour you will have to use, and it may make it weak."

"Is ordinary vinegar detrimental to leather?" was another query.

"No," observed Dr. Parker, "but commercial vinegar will have an effect, as it often contains an amount of vitriol to give it a bite."

After answering these few questions the lecturer gave two hints to his audience. He said: "Never use a large skin to cover a small book. It's ten chances to one that it is shaved down and loses its fibre strength. Use a small skin as thick as you can stand on the book—that is as thick as the book will take it."

Tariff Changes

AND

CUSTOMS REGULATIONS.

From the "Board of Trade Journal."

ST. VINCENT.

A Customs Duties Bill has been introduced into the St. Vincent Legislature in order to give effect to the Canadian-West Indian Reciprocity Agreement signed at Ottawa on April 9th last.

Provision is made in the Bill for it to come into operation on such day as the Governor shall notify by proclamation in the *Gazette*.

Under Table A, paper of all kinds and manufactures thereof (if not exempted), hitherto dutiable at the rate of 10 per cent. *ad valorem*, will, after the Bill comes into operation, only be so dutiable in the case of goods imported from Canada, the United Kingdom and Newfoundland, and being the produce or manufacture of those countries (termed the Preferential Tariff). In case such paper, etc., is imported from foreign countries and British Possessions not specifically granted preferential treatment under the Ordinance, the maximum tariff of 12½ per cent. *ad valorem* will apply. The table of goods exempted from import duty includes all those imported by the Committee of Management of the Free Public Library for the use of that institution; labels, paper wrappers, hand stamps and stencil plates for labelling, wrapping and stamping packages containing produce for export, and printed labels for passengers' luggage, steamer ticket-books and printed material: pictures, music, manuscripts, books, and printed papers—not including unused account books or printed forms or labels; printing presses and parts thereof, printing paper, printing ink and type and all printing accessories. Machinery of other kinds, used in the printing and allied trades, is to be subjected to the same duties as paper.

The list of goods prohibited to be imported includes indecent or obscene prints, paintings, books, cards, lithographic or other engravings or other indecent or obscene articles.

ITALY.

It is announced that bands of paper consisting of two strips super-imposed one on the other and glued together, one coloured in the pulp and the other not coloured, between which were inserted at long intervals longitudinal and parallel threads of hemp, to strengthen the article, is dutiable as "manufactures of paper, not specially mentioned," under No. 256 of the Tariff, at the rate of about 28s. per cwt.

FINLAND.

Paper in sheets with rounded corners, prepared with oil and used for copying letters, is dutiable under No. 235 (5) of the Tariff, at the rate of 176.50 marks per 100 kilos., or about £3 10s. per cwt.

AUSTRALIA.

It is announced that paper towels are dutiable under No. 357 B of the Tariff, at 30 per cent. *ad valorem*, or 25 per cent. if of British origin.

U.S.A.

The Treasury Department have decided that grammars, spelling books, readers, dictionaries, and other books, printed partly in English and partly in foreign languages, intended for use in the study of foreign languages, unless it clearly appears that the text of such books is chiefly in English, may be imported free of duty, under paragraph No. 518 of the Tariff.

There's Always a Boss.

When I began this printing game, I kicked an old style Gordon press, pulled down three dollars every week, but wasn't happy I confess. You see, the fellow over me would scold me fierce and make me sob, and how I longed for the happy day that I'd be able to hold his job. Well, time rolled on as it always does. At last one day my dream came true, I had his job, I had his pay, also another point of view. The foreman now was over me, a grouchy cuss with frowning face, so now I had another boss, and soon I longed to take his place. A foreman later I became and thought that I was surely free, but a superintendent now I found had several things to say to me. When the super flitted hence, I was Johnny on the spot, I got the place but found there was a manager to say what was what. A manager I was by and by, new troubles here I had to face, for I was bossed and cussed and blamed by the big live wire who owned the place. When I'd saved a goodly sum I bought some presses, type and ink, at last I was a genuine boss, was I free? yes—I don't think. I was bossed by those I owed, also by those who did owe me—by my competitor up the street—I found that a man is never free. In this mortal vale of tears, from the time you're born until you're dead, you find, no matter where you work, there's always someone just ahead. The man at the top's no better off, he pays the price for place and power, he doesn't work from eight to five, but punches the time clock every hour. He has a hundred bosses now where formerly he had but one, if he makes mistakes they cost him dear, a good excuse will help him none. The only man who's really free is the worthless tramp in his tattered coat, and even he acknowledges that a wicked bull dog gets his goat.—*Harris Monthly.*

The Scottish Dispute.

A Settlement Arrived At.

TERMS OF THE AGREEMENT.

The conference between the employers and employees of the Edinburgh and Glasgow printing trades, to which we referred in our last issue, resulted in a settlement of which the full terms are as follows :—

Minute of Agreement between the Scottish Alliance of Masters in the Printing and Kindred Trades, the Edinburgh Master Printers' Association and the Association of the Master Printers of Glasgow of the first part (hereinafter called the first parties), and the Scottish Typographical Association and its Edinburgh and Glasgow branches of the second part (hereinafter called the second parties), with the consent and concurrence of the Printing and Kindred Trades' Federation of the United Kingdom, witnesseth :—

(1) The first and second parties hereto, with consent aforesaid, agree to the principle that no new rules or alterations in existing rules which may affect mutual interests may be passed by either employers or employees without mutual agreement.

(2) To embody the above principle in practice, the first and second parties hereto, with consent aforesaid, agree to confer forthwith on the Scottish Typographical Association proposed new rules, 1912 (both national and local), affecting working conditions in Edinburgh and Glasgow.

(3) The first parties agree that the Scottish Alliance of Masters in the Printing and Kindred Trades and the Association of the Master Printers of Glasgow will not, pending and during conference, ask employees in Glasgow to work more than nine hours' overtime in any one week.

(4) The first and second parties hereto, with consent aforesaid, agree that from and after the date of this Agreement all proposed alterations of rules affecting mutual interests shall be submitted for mutual consideration and agreement by both employers and employees.

(5) With the view of giving adequate time for negotiating on and adjusting the said Scottish Typographical Association proposed new rules, 1912, and any other proposed alterations in rules affecting mutual interests, the first and second parties hereto agree that no alteration which may affect mutual interests shall be put into force at the instance of either employers or employees prior to December 31st, 1913, unless by previous mutual agreement.

(6) The second parties hereto agree to submit forthwith this Agreement to the members of the Scottish Typographical Association for acceptance or rejection, as a whole, by voting paper, the result thereof to be reported to the secretary of the Scottish Alliance of Masters in the Printing and Kindred Trades at the earliest possible date.

(7) The second parties hereto undertake to recommend to the members of the Scottish Typographical Association the acceptance of this agreement by voting paper. This agreement, if confirmed by a majority of the votes so taken, shall be binding upon the delegate meeting of June, 1913.

(8) Upon this agreement being signed for and on behalf of all the parties and consenters hereto, the present dispute is hereby declared at an end, and both lock-out and strike notices are hereby withdrawn.

(9) The first and second parties agree, with consent aforesaid, that as a result of this settlement there shall be no victimisation on the side of either employers or employees.

The agreement is signed on behalf of the men by Mr. C. W. Bowerman, M.P., and eighteen other representatives, and on behalf of the masters by Mr. W. B. Blaikie, president of the Scottish Alliance, and fourteen other representatives.

At a meeting of the master printers, held after the conference, the following resolution was unanimously adopted: — "That this meeting of employers in the Glasgow printing trade homologates and expresses its cordial approval of the terms of settlement secured by the employers' representatives as embodied in the formal agreement now submitted, and tenders to them its heartfelt thanks for their sustained and successful efforts on the employers' behalf."

A LARGE American printing office at Montville, N.J., has been burned down, the loss running to about £150,000.

Presentation to a Shields Journalist

Mr. G. B. Hodgson, editor of the *Shields Daily Gazette*, was the recipient, on Saturday evening last, of a handsome composite picture containing the photographs of himself and the members of the District Committee of the North-Eastern District of the Journalists' Institute, in commemoration of his being elected president of the Institute.

In presenting the picture, Mr. R. W. Johnson (*Newcastle Daily Journal*), alluded to Mr. Hodgson's many efforts on behalf of the Society and the District Committee, of which he had been a member for 20 years. They were highly honoured by Mr. Hodgson's appointment as president of the Institute, and felt that the least they could do was to present him with some token of their regard and esteem.

Mr. Hodgson, responding, said that the North-Eastern District was one of which they must all feel proud, being recognised as one of the most progressive in the Institute. The Council of the Institute had decided that from March 1st the unemployment benefit should be 25s. per week instead of 20s. The benefit ceased on a member reaching 65 years of age, but that limitation had been recently partly removed by ordaining that a member over 65 should not take the benefit in two succeeding years. If the recommendation in regard to the subscriptions were passed by the committees and the conference, he thought that limitation could be abolished entirely in the course of another year.

Several toasts were honoured, and the sub-committee—Messrs. R. W. Johnson, E. S. Edwards and T. Greene—were thanked for their services.

The gathering took place at the "Golden Lion" Hotel, South Shields, and there was a large and representative attendance of Pressmen.

London and Norwich Press, Ltd.

Annual Social and Dance.

The staff of the London and Norwich Press, Ltd., held their annual social and dance at the School of Music, Norwich, the other evening. It was attended by nearly the whole of the staff, together with their wives and friends, and presided over by the managing director of the company (Mr. H. Wingfield, M.A.), supporting whom were Mr. J. V. E. Taylor and Mr. E. M. Calvert (directors), Mr. and Mrs. R. J. Peat, Mr. and Mrs. A. G. Turner, and Mr. W. H. Marson. Others present included Mr. A. F. Sherlock, Mr. and Mrs. G. Green, Mr. T. Bartlett, Mr. and Mrs. W. Muspratt, Mr. J. L. Berry, Mr. and Mrs. A. J. Page, Mr. R. W. Nockolds, Mr. and Mrs. T. Beckett, Mr. and Mrs. Miles, Mr. and Mrs. Minns, Mr. and Mrs. Richards, Mr. and Mrs. S. Smith, Mr. and Mrs. Brook, Mr. and Mrs. R. W. Dorey, Mr. and Mrs. May, Mr. and Mrs. W. B. Heard, Mr. W. J. Page, Mr. H. Faux, Mr. and Mrs. Weston, the Misses G. Mace, E. and M. Baker, Eglington, Driver, Neale, Moore, Platten, and Scarnell.

The proceedings commenced with a tea, excellently served, and this was followed by a delightful musical programme, interspersed with dances. The speech-making was of the briefest possible description.

Mr. Wingfield expressed the great pleasure it afforded his co-directors and himself to meet the staff once again under such happy circumstances, and, in a brief reference to the business, mentioned that it was nearly two years since he joined the board of directors. During that period, he was pleased to say, the business had improved immensely, and to-day, thanks largely to the splendid support accorded the board by the employees, matters could hardly be looking better under any conceivable circumstances. On behalf of the directors and himself, he heartily thanked the employees for the admirable way in which they had worked to bring about such a happy state of affairs.

Mr. Taylor, in returning thanks for the kind invitation and the hearty welcome given to his fellow directors and himself, said he had pleasant recollections of past functions in connection with the London and Norwich Press, and was, indeed, delighted to be with the staff that evening. They would be glad to know that the firm was fast gaining a reputation in London for the excellence of their work, and he was sure it would be the ambition of each and everyone of the employees to work hard in order that such a reputation should be maintained. For such a pleasant evening they were largely indebted to Mr. A. J. Page, who threw an immense amount of enthusiasm and attention into the organisation of such gatherings, and in the name of the directors he heartily thanked Mr. Page for his efforts in attending to the social wants of the employees.

The vote was warmly accorded, and Mr. Page made a brief acknowledgment.

Mr. S. Smith having spoken of the pleasant relations which existed between the employers and the employees,

Mr. R. J. Peat, general manager, expressed the thanks of the staff for the encouraging remarks of Mr. Wingfield and Mr. Taylor, and also remarked on the splendid way in which the management was backed up by the employees. On their behalf he cordially thanked Mr. Page and the committee for the excellent arrangements made for the success of that gathering.

Mr. A. G. Turner, works manager, seconded the vote of thanks, which was enthusiastically accorded; and Mr. A. J. Page, in returning thanks, said he was only too pleased to do all that was possible for the enjoyment of his fellow-workers, for it was such annual gathering that rubbed off the hard corners and cemented the good feeling between the employers and the employed. He desired to heartily thank the singers and the musicians for their kind assistance that evening; also Messrs. R. W. Dorey and W. B. Heard for the efficient way in which they had acted as M.C.'s for the dancing.

The following comprised the committee which acted with Mr. Page in arranging the function :—Miss Read, Mr. T. Beckett, Mr. H. Brook, Mr. A. Miles, Mr. R. W. Nockolds, Mr. J. Richards, and Mr. S. Woodhouse.

The "Illustrated London News."

Its New Method of Illustration.

We have referred in several recent issues to the adoption by the *Illustrated London News* of the photogravure method of illustrating its pages and the fine results thereby attained. At the annual meeting of the company, the other day, the chairman, Mr. Charles L. N. Ingram, in a reference to the new departure, said :—

"Last year I pointed out what a wonderful advance we had made with the improved colour photography. We published some wonderful photographs of Egypt, and also for the first time in the illustrated world, coloured photographs of Academy pictures. But we did not stop there. For several years past we have been experimenting with the new photogravure process. About a year or so ago we got so far advanced that we were able to publish in our papers some photogravures of our own construction, but we wanted to be able to give the public photogravure prints every week. It came to our knowledge that there was a firm in Germany who were capable of supplying the necessary machinery, and we arranged with them accordingly. Of course, the machine that we saw in Germany was very small in comparison with the large one which we now have on our premises. The chief reason why we bought this process from the Germans was that they hold the master patent for letterpress and pictures. Without that patent it would not have been of much use to us, so we can congratulate ourselves on having secured that. I consider that we are at least two years ahead of any other illustrated journal. I think, therefore, the prospects for your illustrated papers have never been so good as they are to-day, and I see no reason why next year we should not be able to slightly increase the dividend. Perhaps that is rather boastful, but still, if we pay even the same dividend I think we shall be fairly well satisfied, for the reason that we have to expend a much larger amount of money than we used to do on our publications. Whereas formerly we had to spend hundreds of pounds, we have now to spend thousands. We are always wide awake and looking out for improvements, and I have no doubt that the next great advance in the printing world will be the three-colour photogravure process. We shall watch it carefully, and if we find it is going to be successful you may be certain that we will be there, as we have always been in every new invention which has come out."

Mr. G. J. Maddick also referred to the photogravure installation as follows :—"We have the finest photogravure production in the world. There is no limit to what this process is going to do. Anyway, we hold the position in our hands for a considerable time, because machinery like this cannot be put up in a few days, weeks or months. For at least one or two years the *Illustrated London News* and the *Sketch* will be the only two papers that can produce work similar to what we have been doing during the last few months."

THE death is announced of Mr. Thomas Robert Curme, formerly employed in a Bury newspaper office, but for a long time on the press in Manchester.

Trade Notes.

THE *Liberal Magazine* with its February number enters on the 21st year of existence.

THE Berkshire County Council require tenders for the supply of account books, printed forms and stationery, etc. Forms of tender may be obtained at the Treasurer's Office, Shire Hall, Reading.

THE *Bristol Times and Mirror*, in commemoration of its bi-centenary, presented, with its issue of Saturday last, a special supplement of eight pages, in which it traces its descent from the Bristol *Post-Man* of 1713.

THE annual social gathering of the employees of the *Oldham Chronicle* was held in the Alexandra Hall, Park-road, Oldham. Between 80 and 90 employees of the firm and friends spent a very enjoyable evening.

THE Board of Trade are informed, through the Foreign Office, that the Imperial Ottoman Government have decided to forbid the introduction into the Turkish Empire of playing cards bearing on them the effigy of His Imperial Majesty the Sultan.

A VERDICT for £50 was given in the sporting libel action in which Mr. Thomas O'Rourke, the New York boxing manager, complained of statements in the English journal, *Boxing*, published by *Health and Strength*, Ltd., and printed by Messrs. Hayman, Christie and Lilly.

AT the monthly meeting of the Machine Rulers, Bookbinders, Printers, and Kindred Trades Overseers' Association, on March 4th next, Mr. E. A. Clifford, the honorary solicitor to the Association, will give a lecture on "Employers' Liability," at "The Ship," Ivy-lane, Newgate-street, E.C. Overseer friends will be heartily welcomed.

MR. C. W. BOWERMAN, M.P., will preside at the nineteenth quarterly meeting of the Printers' Medical Aid and Sanatoria Association, at the L.S.C. Offices, St. Bride-street, on Wednesday next, the 26th inst., at 7 p.m. At the conclusion of the ordinary business a meeting in connection with the proposed First Aid Classes will be held. All possible students are invited to attend.

ON Monday, in the Chancery Division, before Mr. Justice Swinfen Eady, the case of De la Rue and Co., Ltd. *v.* the Onto Manufacturing Co. and Waterman Speciality Co. was heard. This was an action to restrain by injunction the defendants from selling or advertising any fountain pens or other stationery under the name of "Onto," calculated to lead to the belief that they were "Onoto" goods sold by the plaintiffs, Thomas de la Rue and Co., Ltd. His Lordship made the order asked for and ordered an inquiry as to the damages sustained by the plaintiffs.

THE *Financial Times* celebrated its 25th anniversary last Thursday by issuing a special 25th Anniversary number, which contained many interesting special articles and illustrations, and a mass of information of particular interest to everyone concerned with finance and commerce. The number ran to 20 pages with a 16-page Special Mining Supplement, and there were numerous illustrations to the special articles. One article described where and how the *Financial Times* is printed, at the St. Clements Press, Portugal-street, Kingsway, W.C., and another the indispensable functions of modern financial journalism. Altogether it was a notable issue.

IT is proposed that pensions in perpetual memory of Charles Dickens, who was president of the Newsvendors' Benevolent Institution from 1854 until 1870, be established at the annual meeting of the institution on February 26th.

MR. CHARLES S. FRANKLING, who has acted as hon. secretary to the Guild of Press Correctors for the past two years, has resigned that position much to the regret of the Council and members generally.

ACCORDING to *Kemp's Mercantile Gazette* there were two failures in the printing and stationery trades of England and Wales for the week ending Friday, February 14th; the corresponding week in 1912 showed three.

QUITE a number of persons engaged in the printing and allied trades will regret to learn of the retirement of Mr. E. J. Carr, from the position of secretary of the Caxton Convalescent Home, Limpsfield, Surrey. Mr. Carr has had indifferent health for some time past, and that in conjunction with his ripe old age, has brought about his retirement. In connection with this Home a movement is on foot to merge the secretaryship with some similar association in the trade, and it is argued that such a combination would result in a considerable saving to both associations.

AT Tower Bridge Police Court, on Friday last, the Magistrate gave his decision on summonses against the Leadenhall Press, Ltd., for printing certain booklets and circulars without imprint and for publishing them, and against Edmund Eaton, Colonel the Hon. Hubert Duncombe, D.S.O., and Daniel Wallace Heims for aiding and abetting. Mr. Gill dismissed the case against Colonel Duncombe. With regard to the Leadenhall Press, he accepted their statement that they acted in accordance with what was a common practice, although an illegal one, in omitting the imprint on the prospectus. He imposed penalties amounting (with costs) to £10 15s. in the case of the Leadenhall Press, and in the case of Messrs. Easton and Heims to £27 6s. each.

The First Cost Congress.

On Tuesday afternoon the first Cost Congress of the Federation of Master Printers and Allied Trades of the United Kingdom of Great Britain and Ireland was opened auspiciously in Kingsway Hall, Kingsway, W.C., the large number attending, nearly 1,200, rendering it necessary for it to be held in this Hall instead of the Hall of the Stationers' Company as originally intended. Col. W. Wright Bemrose (President of the Federation of Master Printers) occupied the chair, supported on the platform by Messrs. Howard Hazell (London), J. E. T. Allen (Manchester), Harry Cooke (Leeds), C. Herman Lea (London), W. A. Waterlow (London), C. B. Johnson (York), J. Forman (Nottingham), W. Blaikie (Edinburgh), R. A. Austen Leigh (London), A. C. Roberts (London), A. F. Blades (London), Reginald J. Lake and E. Taylor Thomlinson (secretaries), etc. Every seat in the large Hall was occupied, and the proceedings throughout were marked by enthusiasm.

After extending a welcome to master printers and others present on behalf of the Council and Costing Committee, the CHAIRMAN said he had received numerous letters of regret for non-attendance, and it was gratifying to notice that one and all were sympathetic with this movement, and some of them expressed the advantages they had already derived from working a cost method of their own, whilst many went further and added that they would be very pleased to contribute towards the expenses of inaugurating this system. The Chairman then read a paper on "The necessity of a costing system: what we expect from its universal adoption," in the course of which he advocated closer and better business relations with one another, mutual respect and confidence within the trade, explained that the movement was largely an educational one, and pointed out that it was the lowest price which ruled the market. The Costing Committee, he said, were offering them advice based on the results of their own systems. The suggested scheme might therefore be taken as the best general one that could be produced, although it might require some modifications to suit varying businesses.

MR. W. HOWARD HAZELL next explained in considerable detail, with the aid of large diagramatic sheets hung at the back of the platform, the system recommended by the Special Committee of the Master Printers' Federation, pointing out its advantages, that it did not interfere with the ledgers, day books, and other books of account, and that it would be possible to start the system with one department only, and gradually to extend it. He urged the printers to adopt the system, as he was convinced that it would lead to less reckless cutting of prices, greater uniformity in prices, and consequently improved profits for all printers. A number of questions were put to Mr. Hazell, who promptly answered each. Ultimately the Chairman had to stop questioners as time would not permit of longer discussion.

MR. ARTHUR C. ROBERTS, F.C.A. (expert and general adviser to the Costing Committee and accountant to the Federation), followed with an exposition of the practical working of the system, etc., in connection with the dockets and cost of production and other forms.

Following a discussion on Mr. Roberts' address, Mr. W. B. BLAIKIE (Ex-President and President of the Scottish Alliance) addressed the meeting, pointing out how necessary it was that every printer should adopt this system, and appealing for a strong union. In support of the latter appeal he gave, in a few words, an object lesson on what had occurred in Glasgow and Edinburgh.

MR. HARRY COOKE (Leeds) spoke on the machine unit as adopted by the Costing Committee, elucidating his arguments with numerous diagrams. A lengthy and interesting discussion followed, and the chairman adjourned the meeting at 5.45.

In the evening a conversazione took place in the Connaught Rooms, Great Queen-street, and the Congress was resumed on Wednesday morning. We shall give a fuller report of the Congress in our next week's issue.

Machine Rulers, Bookbinders, Printers, and Kindred Trades Overseers' Association.

The annual meeting of the above Associa was held at the "Ship," Ivy-lane, Newgate-street, E.C., on Tuesday, 4th inst., when an unusually large number of members were present. The President (Mr. F. C. Peacock), took the chair, and was ably supported by Mr. J. E. Dixon (vice-president). The minutes of the last annual meeting were read and confirmed and some lengthy correspondence was also read. Among the latter was a letter of congratulation from Mr. E. C. Moyce (Secretary of the Printers' Managers and Overseers Association), who has been instrumental in introducing members to this Association and in other ways cementing the good fellowship which has arisen.

Three candidates—all warehouse overseers—were admitted to membership:—Mr. H. Milton (London Colour Printing Works), Mr. A. G. Aves (City Press), and Mr. G. Pavier (Temple Press). After each had been duly

elected, the chairman gave them a warm welcome to the Association, to which they suitably replied.

In introducing the annual report and balance sheet, the president announced that there had been good progress made during the year. Though there had been a kind of "fining-down" process it gave him much pleasure to record the healthy condition of the Association generally but more particularly from the financial standpoint. Notwithstanding a membership of 124 there had only been one claim for unemployed benefit during the year. The two claims for funeral benefit was exceptional, only making three such grants since the Association was founded in 1904. Though this state of affairs was probably unique he maintained that the law of averages would eventually tell and the claims become more frequent, but there was need for congratulation up to the present that this Association was apparently composed of such a healthy body of men. That things would not always run so smoothly was apparent from the remarks in the letter from Mr. E. C. Moyce, whose wider experience also showed the necessity of reconstructing the death benefit rule. In further proof of the need of immediate action the chairman recorded his experience with the considerably fluctuating death rate in a small society with which he was previously connected. By grappling with these difficulties early they should be ready to meet these contingencies when they arose and thus make the Association even a greater success in the future than in the past. In conclusion, he commended his executive, which had done such good work for the welfare of all concerned. The report and balance sheet were eventually adopted as printed.

The election of officers coming next under consideration there was the usual reluctance shown in nominating a president in the place of Mr. Peacock, but on the latter's insistence that an occasional change was essential to the general welfare. Mr. J. Walker at length proposed that the presidential chair should be occupied by the second in command—Mr. J. E. Dixon. Here again was experienced a check by the vice-president refusing point-blank to occupy his senior's position. Finally, however, he was induced to yield and Mr. Dixon was elected president for the ensuing year amid applause. Enthusiasm ran high when the meeting elected Mr. J. Walker to the vice-presidency.

Mr. A. W. Hunt was re-elected as treasurer, and Messrs. S. J. Wills and J. Lee were again returned to the trusteeship. Having every confidence in their integrity it was not deemed expedient to change such positions which would necessitate considerable alterations in the books and at the bank. Mr. G. A. Eden was also re-elected as secretary. Mr. Peacock's services were retained in the executive by his election as committeeman, together with Mr. J. Knight and Mr. J. Fleming who were the successful condidates securing the greatest number of votes. Messrs. A. H. Smith, W. Archer and H. Budd remained in office, while Messrs. F. Pearse, F. J. Wedge and W. Vernum retired in rotation as per rule. A hearty vote of thanks was accorded to the retiring committeemen on the motion of Mr. H. Budd.

The bohemian concert was deferred till March by general consent to allow more time for arrangements. The suggestion to merge the concert and the annual dinner with a mixed assembly caused much discussion, but it was eventually decided the "ladies concert" should be kept separate from the dinner, as on previous occasions. Messrs. J. Fleming and F. C. Cordingley were unanimously elected as stewards for the annual dinner to be held in April.

The ordinary business having been concluded, the meeting resolved itself into a special committee for alteration of rules. In the unavoidable absence of Mr. Pearse, Mr. J. Walker introduced the matter of the funeral benefit rule, on behalf of the Executive.

The Chairman explained the idea for the establishment of a definite fund with the probable prospect of eventually eliminating the death levy. After discussion it was agreed that the recommendation of the executive be carried and that the rule be adopted as printed on the agenda.

It was also resolved that the entertainment fund should be established on the lines laid down by the executive in the last agenda item and that this should take effect from that date.

The meeting concluded with a hearty vote of thanks for Mr. F. C. Peacock's successful chairmanship, he having occupied the onerous position of president for the past four years. The motion was carried unanimously with applause.

THE death is announced from New York of Mr. James B. Hammond, president of the Hammond Typewriter Company, who died suddenly while on a yachting cruise for the benefit of his health. Mr. Hammond was the inventor of one of the first practical typewriters and founder of the typewriter company which bears his name.

Building Surveyors' Fees.

A WELL-KNOWN South London printer, Mr. F. F. W. Oldfield, of Camberwell-new-road, has been having trouble over an addition to his premises. It appears that Mr. Oldfield, who employs a large number of workpeople, had received complaints from them as to the fumes arising from a gas engine which was running in the factory, and to obviate this he decided to remove it to a building outside the factory. The main building had been erected at a cost of about £6,000, and he obtained an estimate from his builders for the erection of a building 26 feet long by 25 feet in depth for the purpose of housing the engine and keeping the same apart from the main building. The builders' estimate for the new building was £72 15s. 0d. The district surveyor claimed to be entitled under the 3rd schedule of the London Building Act, 1894, to one half the fee charged in the case of a new building calculated upon the area of the whole building, upon the ground that the erection was an addition to the main building and not a new building. Mr. Oldfield objected to this charge, and the case was taken into court. In the course of the hearing it was elicited that if this were a new building and not an addition to an old one the district surveyor's fees would be £2 2s., which amount Mr. Oldfield had offered to pay. Mr. Wells, for Mr. Oldfield, said that he hoped to convince the court that this was a new building and not an addition. Supposing a £50 addition were put up at the Bank of England could the district surveyor charge half fee upon the main building? He further pointed out that the fees worked out at a heavy percentage on the cost of the new building. He did not think the legislature ever intended that the district surveyor should have such fees which it was conceivable might amount to more than the cost of the addition. Mr. Oldfield's object in coming into court was to protest against such fees, which were a serious handicap to an employer. He had erected the building in order to remove the engine from his workpeople and entirely for their comfort and convenience, and if such fees could be legally recovered from him he hoped that there would soon be an amendment of the law in regard to same. The magistrate, Mr. Hopkins, however, did not sympathise with that view of the case, and made an order for the payment of the amount claimed by the district surveyor, £10 17s. 6d., with 13s. 6d. costs. The magistrate's decision may have been quite in accordance with the law, but it does seem somewhat of an anomaly that a man who erects an addition to a building already existing should have to pay surveyor's fees on the whole of the main building, and it is as well that printers should know how they stand in such a matter.

* * *

Photographs by Telegraph.

A GOOD many inventors have turned their attention to perfecting methods of transmitting pictures by telegraph from one point to another, and now it is reported from Paris that a French inventor, has succeeded in telegraphing a photograph from Bordeaux to Paris in the record time of four minutes. Mr. Belin's process differs radically from Professor Korn's method, as instead of using selenium he prepares a photographic plate, the basis of which is bichromated gelatine and the surface of which is uneven. A small metal point, passing over the uneven surface of the plate, causes a variation of the electric current, which renders possible the transmission over a telegraph or telephone wire of the lights and shades of half-tone plates and is attended with remarkable regularity and speed. The most interesting feature of Mr. Belin's invention is that it is possible to carry about a small apparatus, weighing about 16 pounds, and immediately attach it to any telephone station. This renders possible the telephoning of pictures over long distances. In the experiment recently made a photograph 6 by 5 inches, was sent by the portable apparatus from Bordeaux to Paris. An hour was occupied in preparing the plate with the uneven surface, but only four minutes were occupied in the transmission of the photograph thereon. The results obtained are said to be in advance of anything yet done in this direction. The sending of photographs by wire may at times be necessary, but all the processes yet introduced have been too costly for ordinary commercial use.

The Ghent Exhibition.

The trade and technical press of this country is to play an important part in the British Section at the Ghent International Exhibition, which opens at the end of April, for a collective display is being organised by the Exhibitions Branch of the Board of Trade. A number of papers have already arranged to participate, and, under the scheme which has been adopted, the display is certain to attract a deal of attention.

The exhibit will take the form of a large reading-room and library where current numbers of the papers will be found on reading tables and bound volumes on the shelves which line the walls. A visitor will consequently be able, not only to see the latest copies of the papers which interest him, but also to refer to back volumes to see the range of subjects dealt with.

The library will have a second interest in its decoration, for it has been specially designed by Mr. Frank Brangwyn, A.R.A., and the work is being carried out under his personal direction. The book shelves are being made of a special light wood stained to a silvery grey, not unlike the grey of the lichen in an old orchard, while the wall above the bookcases will be decorated with black and gold stencilled panels. These panels are new

Digitized by Google

being carried out in Mr. Brangwyn's studio in London, and when they are in place will, in conjunction with the severely simple, yet striking, design of the bookcases, make the whole a most characteristic example of Mr. Brangwyn's work.

It has been found possible, too, to allot one of the best positions in the British Section to the library. On one side it opens direct on to the main avenue through the exhibition grounds, and a large proportion of the visitors entering the British Pavilion must pass through it. On another side it communicates with the offices of the British Section. It also leads out of the gallery devoted to Arts and Crafts, and all visitors to that section are certain to visit Mr. Brangwyn's work.

This is the first occasion that such an exhibit has been made by British trade papers, and there is no doubt that it will create great interest among Continental business men, who will thus have an opportunity of becoming familiar with not only our trade papers, but also their advertisements of British manufacturing firms. The exhibition will remain open for at least six months, and during that time a great deal may be done to advance British trade interests.

The Exhibitions Branch of the Board of Trade have arranged for an official of the British Chamber of Commerce in Belgium to be in charge of the Library, in order to answer all questions and furnish daily reports to the proprietors and editors of the papers taking part.

"THE STORY OF A PRINTING HOUSE" is always interesting, and few such narrations will repay reading better than the handsomely got-up booklet bearing the above title. Originally issued in 1911, it has lately been published in a second edition with additional matter, and its compilation reflects great credit on Mr. Richard A. Austen-Leigh, a director of the firm whose history forms its subject matter, the well-known one of Spottiswoode and Co., Ltd. It is lavishly illustrated, and great names like Samuel Johnson, Benjamin Franklin, and David Hume occur frequently in its pages, which are otherwise full of interesting facts concerning printers and printing, from the beginnings of the business in 1749 down to the present day. Would that some other of our old printing houses provided us with like histories!

THE *Board of Trade Journal* announces that tenders are invited by the Egyptian Ministry of Finance for the supply of index-cards and covers required for the use of Government Departments during 1913. Sealed tenders, accompanied by samples of the articles it is proposed to supply, will be received at the Ministry of Finance, Cairo, up to March 31st. A provisional deposit of 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer is required with each tender. A copy of the *cahier des charges* may be seen by manufacturers in the United Kingdom at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall-street, London, E.C.

An Example

of the many letters received every week from enthusiastic Linotype users.

Increased Work.

Speed in all Changes.

Standing Matter.

Avoids Overtime.

Anticipates Another Machine.

The Purchase Justified.

I am very pleased to say that since the installation of Linotype Model 4 Triplex Machine, the work has increased to such an extent that, without its many strong advantages, it could not have been undertaken. As it is, with the simplicity and quickness of change of body and measure, not to speak of the advantages of the Automatic Quadder, I have easily overcome the extra pressure. When I take into account that a large amount of the work at present in hand will have to stand for some time, and that this will be free from "pi," and not require any of the men picking various letters therefrom, it adds considerably to the value of the matter set. In fact, I don't know how I have done without the machine so long; but for it I would have been working overtime for weeks, whereas I have had no overtime at all. These facts give me every hope that, with the continuance of the present orders, I may ere long be compelled to consider the advisability of again placing an order with you for a machine similar to this with different body founts.

I should like to add that in every respect your points of recommendation in persuading me to purchase the machine have been fulfilled to the letter, whilst the courtesy and attention all through the transaction and afterwards have been most marked.

This is the experience of thousands of Linotype users. Linotype advantages are available to *every* Printer who permits himself to have them.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Feb. 19th, 1913.

AT the end of the last week cash displacements were considerable; about £3,000,000 of Treasury Bills maturing, and there were cash calls to a considerable amount. On Friday the discount market was a little easier, and on Saturday was again in better supply, rates being inclined to ease a bit; there was an influx of £41,000 in gold and Consols remained fairly steady. Monday's markets, however, opened with a cheerless outlook, caused by the unsettled aspect of affairs in relation to Austria and Russia. Most stocks suffered in consequence and there was a fall in prices. Yesterday a better tone prevailed and prices revived slightly. Consols remained weak and were quoted for cash at 74 5/8 and for account 74 7/8.

The industrial market has not been active during the week, consequently there is but little to report. Business has been done in Amalgamated Press Cum. Pref. at 21s. 3d. and 21s. 6d.; in Associated Newspapers Cum. Pref. at 20s. 6d. and 21s.; in John Dickinson and Co. 1st. Mort. Deb. at 101½; in *Illustrated London News* and *Sketch* Ord. at 3s. 9d. and 4s. 4½d., and Cum. Pref. at 13s. 6d.; in International Linotype at 79½, 79½ and 81¾; in Ilford Cum. Pref. at 18s. 3d.; in Linotype and Machinery A Deb. at 62½; in George Newnes Cum. Pref. at 15s. 6d. and 15s.; in C. Arthur Pearson Cum. Pref. at 68s. 9d.; in Raphael Tuck and Sons Cum. Pref. at 97s. 6d., 98s. 9d. and 100s.; in Weldons Ord. at 31s .3d., 31s. 10½d., 31s. 3d. and 33s. 9d., in Cum. Pref. at 20s. 3d. and 19s. 9d.; and in Waterlow and Sons Def. Ord. at 26⅞ and 26⅝.

DIVIDENDS AND REPORTS.

W. B. FORDHAM AND SONS.—The directors of W. B. Fordham and Sons, Ltd., recommend a final dividend at the rate of 6 per cent. per annum, less income-tax, for the half-year ended December 31st last, making 5 per cent. for the year, the same as for the previous eight years.

"COUNTRY LIFE," LTD.—The profits for the year amounted to £20,136. A final dividend is declared of 5 per cent., together with a 2½ per cent. bonus on the ordinary shares, an interim dividend of 5 per cent. having already been paid on these.

BAXTER'S LEATHER CO., LTD.—The report of Baxter's Leather Co., Ltd., for 1912, to be submitted at the meeting on the 28th inst., states that, after providing for all expenses, salaries of managing directors, depreciation of plant and bad debts, the year's trading shows a profit of £10,460. There was a balance brought forward of £1,271. The directors recommend a further dividend of 5½ per cent., less income tax, making 8 per cent. for the year, placing to reserve £2,000, bringing the total reserve fund up to £18,000, and carrying forward £1,232.

CO-OPERATIVE PRINTERS.—The Birmingham Printers, Ltd., in their report say that, "assisted by the new Insurance Act, we have been able to induce every employee to become a member of his or her trade union." The trade for the half-year ended December 31st, 1912, amounted to £3,356, making a total for the year of £6,489, an increase of £1,598 over the figures for 1911. Increases of wages and the cost of the Insurance Act reduced profits; these however amounted to £406, for which capital had 5 per cent. interest plus a bonus of 1d. in the £, the employees a dividend of 9d. in the £ on their wages, and customers a return of 6d. in the £ on their trade. £40 was placed to the reserve fund and £121 carried forward. The share capital is £5,307, and the accounts owing by customers at the end of the year was £1,885. If the present progress continues the committee feel they will find it necessary to add another storey to the premises, plans for which have already been prepared by the architect.

COMMERCIAL INTELLIGENCE.

Re THOMAS PRICE CHEVERTON, Printer and Stationer.

At the Norwich Bankruptcy Court, recently, before Mr. Registrar Cooke, this debtor came up for examination. The gross liabilities are £339 17s. 2d., expected to rank £306 0s. 11d., deficiency £245 15s. 7d. Debtor stated that he was brought up as a printer. Up to April, 1907, he was in the employ of his father, and from then up to 1910 was in the employ of his father and cousin, who were in partnership. The printing and stationery business originally belonged to the debtor's father, who made over the plant to his daughters, and they carried on the business. In 1907 debtor's father and cousin, William John Cheverton, entered into partnership, and also into an agreement to hire the machinery and plant from the Misses Cheverton. Under the partnership agreement there was a clause to the effect that when debtor came of age his father could if he liked, put him into the business in his place. Debtor came of age in 1909, and May 8th, 1910, his father sent him a letter stating that he would be happy to carry out the arrangement by which debtor was to take his place in the firm of W. and T. Cheverton. On that date debtor became partner with his cousin, and ten days later they asked debtor's father to remain with them, and he accepted. The firm then consisted of T. Cheverton, sen., W. J. Cheverton, and Thomas Price Cheverton, and traded under the style of W. and T. Cheverton. The partnership continued until September, 1912, and then debtor's cousin retired from the firm, pursuant to a notice he had given six months earlier. That left debtor and his father alone in the firm. The retirement of debtor's cousin from the firm was not gazetted, but notice was sent to the creditors. On January 7th this year the debtor was served with notice by his father to terminate the partnership at the end of six months. Within the last few days his father had died. On January 25th, when his father was dangerously ill, debtor filed his petition in his own name alone. Debtor stated that the business had not been thriving for some time, and last season was a bad one. The examination was closed.

Re C. S. DIXON, Printer and Stationer.

The affairs of this debtor, who failed in 1836 whilst carrying on business in Aldersgate-street, E.C., came before Mr. Registrar Hope, last week, at the London Bankruptcy Court, in respect of a final dividend sitting, when an order was made for the distribution of a dividend of about 1s. 6d. or 2s. in the £. It cannot be hoped that any of the creditors are still alive, but their representatives will no doubt welcome the notification that subject to the claims having been established they will be entitled to the dividend.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

THE BANKRUPTCY ACTS, 1883 AND 1890.

FIRST MEETING AND PUBLIC EXAMINATION.

WORSTENCROFT, A. W., lately trading as J. Brandwood and Co., at 21, Saville-street, Oxford-road, Manchester, bookbinders' materials manufacturer. First meeting, February 25th, 11 a.m., at the offices of the official receiver, 11, Dale-street, Liverpool. Examination, March 3rd, 11 a.m., at the Court House, Government-buildings, Victoria-street, Liverpool.

NOTICES OF INTENDED DIVIDENDS.

RICHARDS, T. A., "Neath News" Office, Ropewalk, Neath, journalist. Claims by February 26th, to H. Rees, Government-building, St. Mary-street, Swansea.

BIRCH, W., trading as M. A. Birch, 23, Oxford-road, and 7, Gun-street, Reading, stationer, etc. Claims by March 1st, to C. Mercer, official receiver, 14, Bedford-row, London, W.C.

RASMUSSEN, J., 3, Southwark-bridge-buildings, Southwark-bridge, London, S.E., printer. Claims by March 5th, to A. Willmott, 14, Old Jewry-chambers, E.C.

NOTICES OF DIVIDENDS.

BREWER, G., 183, Gloucester-road, Regent's-park, London, W., printer. First and final dividend of 1s. 6½d., any day except Saturday, 11 till 2, at Bankruptcy-buildings, Carey-street, W.C.

CHALFONT, W. W., and GRIGGS, H. J., trading as W. W. Chalfont, at 84, Union-street, Marylebone, London, W., printers and stationers. First and final dividend of 7s., February 19th, or any subsequent Monday or Wednesday between 10 and 1, at the offices of F. Nicholls, White and Co., 14, Old Jewry-chambers, E.C.

WESTALL, L. W., the Lyttleton Estate and Merton-road, lately also at Richmond-road, Malvern Link, Worcestershire, printer, stationer and publisher. Supplemental dividend of 7½d., February 22nd, at the official receiver's office, 11, Copenhagen-street, Worcester.

APPLICATION FOR DEBTOR'S DISCHARGE.

CHAPPELL, H. V., trading as Chappell and Co. and the Castle Stationery Co., Three Queens-lane, 35-36, Church-street, Temple, and 19, Castle-street, Bristol, printer and stationer. To be heard March 14th, 11 a.m., at the Guildhall, Bristol.

NOTICE OF RELEASE OF TRUSTEE.

KENNEDY, B., Dudley House, Southampton-street, Strand, W.C., author. Trustee, G. W. Chapman, Bankruptcy-buildings, Carey-street, W.C. Released October 28th.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

There will naturally be very great attention to what the Lord Chancellor had to say regarding the Vacher judgment, as to which the comment is so constantly being made that it has placed trade unions above the reach of the law. The Earl of Dunmore, in the House of Lords, called attention to this Vacher decision.

o o o

He said it has now been made clear that the immunity of trade unions extended to all circumstances—that was to say, with the exception of breach of contract, any procedure for which the law ordinarily provided a remedy could be committed by a trade union with absolute impunity. The powers accorded to trade unions under the recent decision had in Lord Dunmore's opinion undermined every principle of justice and equity, and, in the circumstances, he asked whether the Government intended to propose any alteration of the Act.

o o o

Viscount Haldane, in replying, said the object of the Act was to protect sick and benefit funds from being diminished as the result of the action of individuals who happened to be leaders of trade unions. He had always felt critical of the remedy for the evil, and would have preferred rather to restrict the law of agency, but the result would have been the same.

o o o

Lord Haldane added, however, that it was not the fact that trade unions could use the machinery of oppression with absolute immunity. The individuals who put that machinery into operation were just as liable as ever. It was true Parliament had decided a trade union could not be sued, but that, he thought, was a smaller evil than allowing the funds for the sick and aged to be attacked.

o o o

It was, I always considered, the peril to those funds, provident and superannuation, which led to the 48 hours application of about two years ago. That form of peril was connected, not with litigation, but with the heavily increasing annual drain in payment to members. Printerdom in general seemed to have very little information as to how immensely those payments had grown of late years and how they seemed likely to grow.

o o o

Had it known these things—had it any rate realised them—it would have recognised that some such action as was taken was to be expected.

o o o

As Herbert Spencer says, there is such a thing as a social science, though to be sure it is not an exact science if any science can really be called by that name, which he seems to doubt.

o o o

February 18th, the first Congress day, dawned gloriously. A bright sun, and a keenness in the air. I told my friends as I met them that I was glad I was alive; I wished they were. You do say things like that to your friends sometimes. If it comes to that, we are most of us becoming alive nowadays.

o o o

There may be plenty of room for differences of opinion regarding "Costing Systems," but I think all will agree that American printers do well, and give us a hint in one particular. I am referring to the way in which they list on the back of certain of their Standard costing forms a number of headings under which time will certainly or may very likely be spent.

o o o

Using those forms and referring to those headings on the back, the compositor or pressman can give a great deal of information to the counting-house by merely putting down a few figures, 2 or 7, or 11 as the case may be.

o o o

Another good feature of the Standard American forms (I believe the forms I have seen are known as the Standard) is that there are quite a number of different headings under the caption "Delay time." These, too, are listed upon the back of the forms. "Faulty blocks" for instance is one item in the list, and its number 8 or 12, or whatever it may be is pretty sure to have a place in the pressman's list. This may not always be perfectly fair to the blockmaker; but if accusations are verbally made against the platemaker (or if that is the explanation which is certainly going to be given if the cause of delay be demanded), it is certainly wise that there shall be some record of the experience or the opinion.

o o o

Seeing faulty blocks referred to or condemned, may lead the printer to reflect that he may have been making a very false economy in cutting down his platemaker's prices. He may have saved a few pence at the cost of many shillings.

o o o

He may have been attempting indeed quite a hopeless task. For although he can doctor ink, or mature paper, or adjust impression, or transfer responsibility for a job from one man to another, or attain some modified effects by interlaying or underlaying or overlaying, he cannot put into the block the work that is really not there at all.

o o o

He may see the wisdom of taking a dose of his own medicine. He may decide that he himself will buy the best and pay the best price, that he can afford, and will take good care, on his own part, to call for the justice from his customers which he renders to the platemaker, whose customer he is.

o o o

I doubt if very many really take account of the large amount of time occupied in work for which they can hardly propose to make a charge.

o o o

American dockets look formidable at first, but are not nearly so troublesome to handle as they appear. You have only to look into them to see the difficulties vanishing.

Since writing the foregoing I have attended the first day's sitting of the Costing Congress. It has been the greatest and most hopeful event in British printerdom for a generation. At last the craft is in earnest to reform itself: to become really businesslike; to recover and maintain self respect; and to seek and ensure all possible co-operation and companionableness among its thousands of members. No word evoked heartier response than Col. Bemrose's appeal at the opening for a little more mutual confidence.

o o o

Too much trust may be weakness; too much distrust is paralysis.

o o o

Happily there is a large sanity in printerdom at all times—even the worst times, and I think it will save the position now.

o o o

Twelve hundred master printers attended the Congress; a thing almost unbelievable a few months ago.

o o o

The chief personal triumph of the day was Mr. Howard Hazell's. He entered the hall a big man, and left it a much bigger. The thoroughness of his grasp of the committee's costing scheme, his lucidity, his readiness, the ease with which the gathering could generally hear him in that large and crowded hall, his directness, terseness, and engaging frankness in reply—all these things impressed and delighted the Congress.

o o o

Mr. Harry Cooke, of Leeds, also did remarkably well. He had been at very great pains to prepare abundant tables, and these were effectively staged. Here we had the typical straight, plain, able Yorkshireman; modest, with all his position and powers. Unquestionably he scored.

FRANK COLEBROOK.

"LLOYD'S PENNY FARM AND ALLOTMENT BOOK" which is published by *Lloyd's Weekly News* (post free, 1½d.), appeals directly to the many thousands of farmers, small-holders, and allotment-holders in Great Britain and the Colonies. Within the compass of 100 pages every phase of the subject is explained with remarkable amplitude. The information, all of which is supplied by experts, is quite trustworthy; and the contents of the book have been verified by the Board of Agriculture officials.

THE late Mr. John M'Queen, printer and stationer, of Galashiels, has left estate valued at £4,602.

LECTURES ON THE
History of Printing & Bookmaking.

The concluding lecture of the course of six on "The History and Progress of the Arts of Printing and Bookmaking," by Mr. R. A. Peddie, was delivered at the St. Bride Foundation Institute on Monday evening, when he dealt with the state of printing of to-day. There was an interesting display of German book productions, type specimen books, offset printing in colours, and a collection of English and continental books. In addition to this each member of the audience was presented with a collection of specimens of the productions of some of the English typefounders and of offset printing.

Mr. PEDDIE divided his lecture into two parts, first roughly describing the present position of the printing industry as applied to book crafts, and secondly, pointing out what should be considered a kind of canon of book production—the element which goes to make the real book. To look at things at the present day, he said, one could not but hold the opinion that everything was in a rapid process of change, and since it started, say in 1800, there had been very little stopping of the rate of progress. Since 1890 we had seen typesetting machines became an actual part of the printing industry. Before that they were really more experiments than anything else. But the linotype, and still more recently the monotype, had revolutionised a very large portion of the printing industry, and the rate of progress had largely increased.

New methods of illustration had also increased the rate of production. Then again new printing machinery had had a similar influence. The printing machine manufacturer was always turning round in his mind methods for making the machine produce faster results with very slight alterations to it. They saw that everything was tending towards rapidity of production and new methods helping in that direction.

The lecturer then turned to a consideration of the type faces of to-day. Of the four principal countries—England, France, Germany, and the United States of America—England still remained faithful to two styles of type for book production: old faced type and revived old style. France still remained faithful to a few rather old fashioned letters which were used about 1800, which was a design from the types used by Bodoni and the printers of France in the eighteenth century. Very few new types were used in France to-day. On the other hand, Germany had shown the greatest development, perhaps, of any country in the way of varieties of type and combinations of those varieties. Naturally, the largest number of types would be found amongst the Gothic varieties. but, at the same time, there had been during the last 20 or 30 years enormous progress in the number of new roman types made in Germany. In America one could not say there was any definite American type. America had not developed a type of its own. She had developed a large number of display types—many of them based on English models—but there was nothing definitely American.

It was in illustration that we found considerable development at the present day. It was generally considered that half-tone and three-colour process were not the last word in book illustration. Mr. Peddie drew attention to the reproductions of the Old Masters by the Menpes Press as the high-water mark in three-colour production, and to the colour printing by Mr. Chris. Fowler on unglazed paper. On the perishability of paper he said everyone was looking for a process in which a picture could be printed on a lasting paper, and which would have all the effects of the half-tone without any of its disadvantages. In two directions progress had been made, namely, offset lithography and machine photogravure. Having shown examples of this work, Mr. Peddie next turned to the book itself.

The book of to-day, he said, was as a rule not a specimen of good craftsmanship. More than that, the physical value of the book did not increase with the price paid for it. Many were printed on a featherweight paper which did not allow the stitches to get a hold, and the book went to pieces very quickly indeed. The surface was rough, and held every scrap of dirt with which it came into contact, and therefore was useless for library purposes. There was no doubt printing paper as a whole had lost in quality during the past few years. A well-known authority put it down to the fact that paper was re-made—that paper was made from paper, and there was not sufficient new fibre put into it to hold it together. It went through the process of beating once more, and consequently was beaten too much, the fibres were too short, and the paper would not hold together. The majority of books to-day were printed on one of four kinds of paper: (1) antique, or featherweight; (2) printing papers with a moderate finish or surface; (3) highly surfaced printing papers, and (4) art papers, which consisted of paper surfaced on both sides with mineral matter. He advocated the limitation of the use of art paper as much as possible, illustration on a separate paper to the text and printed on one side only, and the avoidance of a too thick or too thin paper for the size of the book.

With regard to the printed page, this should not be scattered upon the paper, but the surrounding margins should be graduated, so that when the two pages were opened they would show a pleasant proportion. Seventy-five per cent. more was wanted at the fore-edge than in the inner margin, and the relative figures for each of the margins were 4, 5, 7 and 8¾. A larger type was better than a small type with much leading. Use one character of type face in as few sizes as possible for the whole display of a page. The old-face or revived old-style was the best for book work. For illustrations line blocks were more in harmony with the type than half-tones.

Mr. Peddie's concluding remarks had reference to publishers' bindings and the inside making-up of the book, in the course of which he said sewing by machinery was not objected to, but in nine cases out of ten wire sewing was bad. If it was necessary to use wire, a rust-proof must be used, and the fabric on the back must be of a much stronger character than if the book was sewn with thread. The date of the book should be on the title-page as well as on the cover. Every book should have a list of contents, an index, a list of plates, the title of the plate should be on the plate itself, head-lines should not be the repeated title of the book; one wanted the contents of the page they were reading. If that was not possible, let it be at least the contents of the chapter. The printer's imprint should be given, and there should be at least one blank leaf at the beginning and end of the book.

Celluloid Cliches.

The object of a recent French patent, by Mr. F. Germani, is a process for direct printing on celluloid, so as to economise material and save time, compared with lead stereotyping. The movable type is engraved reversed (negatives) which when set up gives a positive cliché. A sheet of warm celluloid is applied to this cliché and then both are pressed together in a machine for the purpose. The celluloid is then allowed to cool and bears upon it another negative cliché, upon which a direct impression is made to obtain a positive. Employment of celluloid in printing works, the inventor says, will be of incalculable value for book work, from the hygienic point of view, as lead and antimony are unhealthy, and from the point of view of economy of time, labour and material. With celluloid, it is claimed, stereotyping can be executed for newspapers, books, pamphlets, designs, posters, etc. These clichés take up very little room and are convenient to handle as they are very light.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

BOOKBINDING SUPPLEMENT.

No. 28. LONDON: FEBRUARY 20, 1913. Issued Monthly, with the British and Colonial Printer and Stationer.

Bookbinding Notes and News.

The Manchester bookbinding trade dispute may be considered as terminated. The previous conference having failed, a fresh one was held, between representatives of the Manchester and Salford Master Printers' Association and the Printing and Kindred Trades Federation of the United Kingdom. The discussion lasted all day, and in the end an agreement was arrived at, viz., an advance of 2s. a week, making the minimum 35s., to be given at once, and a conference on binding conditions to be held within a month. If the conference arrives at an agreement, then another 1s. a week is to be paid forthwith, thus bringing the minimum up to 36s., but failing an agreement the granting of this extra shilling is to be postponed till July 1st. The question of the re-instatement of the strikers who were still out was raised, and whilst making no definite promises, the employers agreed to do their best for them. They also informed the workers' delegates that some form of time docket would have to be put in force in the trade. On the whole, the result of this strike is a victory for the men. Speaking generally the conditions agreed to have been faithfully observed, but in one or two cases it is alleged that the agreement as to no victimisation has been flagrantly disregarded, and this has caused some ill feeling. Some of the firms have been too eager to anticipate the proposed conference regarding the alteration of working conditions, and there is a danger that if this policy is persisted in the men will refuse to meet the employers in conference, and further trouble will ensue.

After Manchester, Scotland? It will be within the knowledge of many of our readers that in September last the Scottish District Council of the Bookbinders and Machine Rulers' Union sent a Memorial to every employing binder and ruler in Scotland, asking that no more female learners be introduced after December 19th to any branch of those trades, save folding, sewing, plating and end-papering in cloth work; folding, sewing and plating in letterpress work; folding, sewing, paging and perforating in stationery work; and laying-on and folding in ruling. This was duly considered by the local employers' associations, who ultimately passed the matter on to the Scottish Alliance of Masters in the Printing and Kindred Trades, asking for their views. A committee was appointed to go into it, and in the end the Bookbinders' Union was informed that the prayer of the memorialists could not be acceded to, owing to the drastic nature of the proposal. The Bookbinders and Machine Rulers' Union, however, whilst expressing their disappointment, took up the position that they considered the new rules in force from the date mentioned in the Memorial, though they were willing to meet the employers and exchange views. Accordingly, a conference took place at Edinburgh on January 3rd, and both sides reported the result to their headquarters. The outcome of the employers report was that a statement of their position was forwarded to the Scottish District Council of the Bookbinders and Machine Rulers' Union just before the publication of our last Supplement. A reply was naturally looked for, but up to the time of writing these lines has not been received. It was mentioned in the employers statement that the number of female workers in the trade who would be displaced if the Union had its way is considerably in excess of the whole number of Union journeymen and apprentices in Scotland; and further, that the number of girls being more than six times that of the apprentices, it is impossible that the work done by the displaced female hands could be done by the apprentices.

Employment in the bookbinding trade continued good generally during December, and was better than in the same month of 1911. The percentage of unemployed trade unionists in London, out of a total of 3,424, was, however, greater than in November (3·1 against 1·8), but below the 5·7 recorded in December, 1911. In other districts the percentage was 2·0 out of 3,110, as compared with 2·1 in November and 2·2 in December, 1911. With fancy leather workers' employment was generally good, much overtime being reported. London Bookbinders report a slight falling off in employment during January, and women bookfolders have also found trade quiet recently.

The Belfast *Northern Whig*, reviewing the conditions of local trade during last year, says it is not so long ago that efforts to place the bookbinding industry on a solid basis locally were looked at askance, but experience has justified the foresight of those who made the experiment, with the result that the department is now a thriving one, with every prospect of a great future before it.

The contracts placed by H.M. Stationery Office during December included the following:—Binding 20,000 Manual of Map Reading and Field Sketching, J. Adams, 76-78, Gray's Inn Road, W.C.; Binding 6,000 Wireless Telegraphy Manual for H.M. Fleet, Vol. I., A. Straker and Son, Smith Bros., Ltd., 4, Carmelite Street, E.C.; Binding 8,500 Technical Instructions XVI., E. Symmons and Sons, Ltd., Belvedere Works, Hermes Hill, Pentonville, N.

Owing to the success of the Social Evening held by the students of the Bookbinding Class at the Central School of Arts and Crafts, Southampton Row, it is proposed to hold another one on Saturday evening, April 12th. It is also proposed that it shall be open not only to present and past students of the class, but also to members of the bookbinding and allied trades and their lady friends. In order to complete arrangements, it would greatly assist the Committee if old students and others would notify as soon as possible the number of tickets required, to Mr. P. McLeish, at the Central School, and they will be forwarded in due course. Tickets (1s. 3d. each) include tea, and the concert will wind up with an hour's dance. Volunteers towards the programme, instrumental or vocal, will be cordially welcome, and should communicate with Mr. W. H. Green, at the Central School.

The usual annual Exhibition of the work of the Students at the Camberwell School of Arts and Crafts closed on Monday last, after being open some three weeks. On this occasion only one case was devoted to examples of bookbinding, of which there were rather more than a dozen, including a few quarter and half-bound books, and some to which the exhibitors names were not attached. There was not very much of importance, but two or three items are worth noting. J. Adams showed a folio volume bound in red morocco, the upper cover of which, surrounded by a plain three-line border, was divided up by a series of leafy sprays into sixteen lozenge-shaped compartments, enclosing flower-and-leaf ornaments. The spandrels between them were in part filled with single leaves, the remainder being occupied by the date 1912, the school initials C.S.A.C., and those of the binder. All the tooling was in gold, and the design was a neat and well-balanced piece of work, which formed a welcome relief to the rectangular style of book cover decoration so much in favour lately with some of the art schoolmen. H. Hallinon exhibited a large folio volume, "Illustrations of Incised Slabs," in maroon morocco. The upper cover has six concentric single-line borders, the innermost enclosing a large centre panel, plain except at the upper part, which bears the inscription in four lines of bold roman lettering, the ends of the alternate ones being filled out with leaf ornaments. There is also a three-leaf ornament at each corner of the board, and a single leaf in each panel of the back. This is, on the whole, a fine and dignified example of plain gilt binding. J. G. Chapple had a folio volume bound in green morocco, the upper cover having, in the lower centre, a shield set angle-wise, composed of four inlays of coloured leather, surmounted by a helmet and crest, and surrounded—nearly to the edges of the board—by a sort of mantling in the form of masses of wavy-leaf foliage, in part composed of white and grey inlays. The gilding on this cover seemed heavy, and the design, though well conceived, rather too coarsely executed.

Amongst other items on view at the Exhibition may be mentioned an embroidered book cover for an 8vo. copy of Emerson's "Essays," by C. Style, fully worked out on a blue silk ground. The upper cover has a rectangular panel formed by a sort of chain of simple ornaments, worked in vari-coloured silks, with corner ornaments in similar style. The lower cover has only a large central ornament to match, and the back is divided into four panels, filled with flower and leaf sprays worked in the same way. We liked this better than the design for an imperial 8vo. embroidered cover shown by M. Acton. This has a maroon-coloured ground, intended to be decorated with groups of vine leaves and fruit, worked in natural colours, alternating with small panels filled with leaf ornament, a flamed sun occupying the central space. The lower cover (which had a group of gilt stars in the centre) and back were ornamented with scrolled line designs round the edges.

The seventh Annual Exhibition of the Cleveland Guild of Printers, Lithographers, Bookbinders, etc., Middlesborough, will be held on April 17th and 18th next. The following competitions will be held in the bookbinding section, and any member is entitled to send specimens. Rules and conditions, together with entry form, may be had from the Secretary, Mr. S. H. Walker, care of Jordison and Co., Ltd., Middlesborough. All entries must be sent in by March 26th.

RULER JOURNEYMEN.
Best Six Specimens of Work done during the year; also one test Specimen of Ruling from instructions supplied by the Executive Council. First prize, value 7s. 6d.; second, value 5s.

RULER APPRENTICES.
Best Six Specimens of Work done during the year; also one Test Specimen of Ruling from instructions supplied by the Executive Council. First prize, value 5s.; second, value 2s. 6d.

BINDER JOURNEYMEN.
Specimen of High-class Binding. Size, leather and style to be selected by the competitor, who must do all the work entailed in binding the book. First prize, value 15s.; second, value 5s.

BINDER APPRENTICES.
A Letterpress Volume, bound half-Persian. First prize, value 5s.; second, value 2s. 6d.

The old-established bookbinding business carried on at 16, High-street, Camden Town, N.W. (and formerly at King's-cross) by the late W. R. Balls, has been purchased by Mr. Jas. Adams, 76-78, Gray's-inn-road, W.C.

Messrs. Bailey Brothers, wholesale bookbinders, of Clarendon-buildings, Ronald's-

Digitized by Google

road, Highbury, N., notify that they have much increased their floor space, and have laid down the newest and most up-to-date machinery for cloth binding, which they are now able to undertake on favourable terms.

Messrs. Corby and Co., account book makers and machine rulers to the trade, off St. Andrew's-hill, E.C., have formed their business into a private company, with the title of F. W. Corby and Co., Ltd. Mr. Corby is managing director.

The specimens of work issued with the Report for 1910–11 of the L.C.C. School of Photo-Engraving and Lithography include a full-size facsimile of the upper cover of the book presented to the King on the occasion of his laying the foundation-stone of the County Hall (see our Supplement for April last). It is reproduced by photography and lithography, in the colours of the original, and embossed by an electro taken from the leather itself. The work was carried out by Sukumar Ray, and reflects much credit on him.

The "Industrial Directory" for 1913, just published under the auspices of the Board of Trade, contains lists of Employers' Associations, Trade Unions, Friendly and Co-operative Societies, etc., throughout the United Kingdom. The following is a list of the organisations of this kind associated with the Bookbinding Trades, with the names of the secretaries:—

Association of Master Bookbinders and Machine Rulers of Edinburgh—W. A. Orrock, 3, Coates-crescent, Edinburgh.

Glasgow Bookbinders' and Machine Rulers' Association—Wm. Brodie, 77, St. Vincent-street, Glasgow.

London Association of Employers in the Bookbinding Trade—R. W. Leach, 41, Ellesmere-road, Dollis Hill, N.W.

Bookbinding Section of the London Chamber of Commerce—C. E Musgrave, Oxford-court Cannon-street, E.C.

Master Bookbinders' Association—H. Miller, 1, Oxford-court, Cannon-street, E.C.

London Society of Machine Rulers—H. Morter, 29, Camden-road, Markhouse-road, Walthamstow, E.

Book Edge Gilders' Trade Society (London)—E. J. Hubbard, 106, Ruskin-avenue, Manor-park, Essex.

Manchester and Salford Society of Women employed in the Bookbinding and Printing Trades—Miss I. Forsyth, 5, John Dalton-street, Manchester.

National Union of Bookbinders and Machine Rulers—J. Kelly, Campfield-chambers, 312, Deansgate, Manchester.

London United Society of Fancy and Morocco Leather Finishers—R. de Bell, 18, Eastlands-road, Perry-hill, Catford, S.E.

Provincial Friendly Society of Spanish and Morocco Leather Finishers—W. H. Stancer, Ivy Villa, Greenfield-street, Nottingham.

Fancy Leather Workers' Trade Society—C. H. Clark, 77, Mann-street, Walworth, S.E.

Women's Trade Society of Fancy Leather Workers—Miss L. Stapleton, 9, Albert-square, Manchester.

Bookbinders' Co-operative Society, 17, Bury-street, Bloomsbury, W.C.

The (London) Society of Women Bookbinders, after an existence of 40 years, has had to disband, as the workers could not afford the Insurance payment as well as subscription to the Society. Many of the old members were very sad at the final meeting, which was held on January 15th. A huge cake was presented for the occasion by Miss Jean Grieve, who sympathised keenly with the older members of the Society. The cake was made like a big open book, iced, and on one of the gilded leaves had in old English characters: "The Society of Women Engaged in Bookbinding, 1873-1913," and on the other page the names of the founders: Mrs. Patterson, Mrs. Hodgson Pratt, Mrs. Sims (mother of George R. Sims), Lady Dilke, in mauve lettering, and Miss Eleanor Whyte, the Secretary for thirty-nine years, in pink and white lettering.

The Report of the Vellum Binders and Machine Rulers' Pension Society for 1912 shows a cash balance in hand of £82 3s. 5d. at the end of the year, as compared with £80 6s. 1d. at the close of 1911. Two pensioners have died during the year, and it has been decided to fill one of the vacancies, for which there are four candidates. The amount of the Benefit Funds on December 31st, 1912, was £2,399 17s. 8d. The Seventieth Annual Meeting of the Society will be held this (Thursday) evening at the St. Bride Institute, Bride-lane, London, E.C., at 8 p.m., when Mr. A. C. Clements will preside.

The London County Council have passed a resolution that in future a 50-hour week be recognised as the practice obtaining in the London Bookbinding Trade, and all future contracts placed by the Council will go only to firms who observe this rule.

The January number of the *Studio* contains illustrations of several of the bindings referred to in the article on the Exhibition of the Arts and Crafts Society which appeared in our December Supplement.

In the course of a lecture on the Art Bookbinders of Europe, delivered before the Times Book Club on January 30th, by Mr. Cyril Davenport of the British Museum, that gentleman expressed his opinion that Mr. Cobden Sanderson was the best bookbinder in England, and that he was followed closely by Sir Edward Sullivan, Mr. A. de Sauty, Mr. Sutcliffe, and Miss McCall.

Those of our readers who are in a position to sell books in fine modern bindings should procure a copy of the "Illustrated Trade Catalogue of Miscellaneous Books in various Leather Bindings," recently issued by Messrs. R. Rivière and Son, 29–33, Heddon-street, Regent-street, W. It extends over upwards of a hundred 8vo. pages, is well printed on art paper, neatly bound in boards, and contains detailed particulars of a very large selection of standard and other popular works in most branches of literature. Practically all of them are supplied in several styles of binding, progressively priced according to material and design, and of these there are numerous illustrations. The frontispiece represents a fine example of hand tooled work, on a copy of the ubiquitous Rubaiyat.

In connection with their call for tenders for bookbinding for the Public Libraries, the Wandsworth Borough Council received the following tenders:—A. West and Co., Enfield Town, percentage above schedule prices, 15 per cent. three years; W. Easy, Hatton-garden, E.C., percentage below schedule prices, 2½ per cent. one year, 2½ per cent. two years, 2½ per cent. three years; A. R. Wills and Son, 47, Upper Tooting-road, percentage below schedule prices, 2½ per cent. one year, 2½ per cent. two years, 5 per cent. three years; G. F. Banting, Putney, percentage below schedule prices, 5 per cent. one year, 7½ per cent. two years, 10 per cent. three years; James Adams, 76–78, Gray's-inn-road, W.C., percentage below schedule prices, 10 per cent. three years; W. Newbury, East Ham Bookbinding Works, E., percentage below schedule prices, 7½ per cent. one year, 10 per cent. two years, 10 per cent. three years; G. Wheeler, 46, Ledbury-road, Bayswater, percentage below schedule prices, 10 per cent. one year, 12½ per cent. two years, 15 per cent. three years. The Library Committee recommended the acceptance of Mr. Wheeler's tender for a period of three years.

The Borough of Islington is asking for tenders for the binding of books in its Public Libraries for either one, two, or three years, from April 1st next. Forms and particulars may be had at the Town Hall, in Upper-street, N. The last day for receiving tenders is the 27th inst.

The imports of book cloth into the United Kingdom during last month amounted to 32,853 yards, value £767, as compared with 29,870 yards, value £763, in the same month of last year, and 22,123 yards, value £591, in January, 1911.

To commemorate the amalgamation of the four London sections of the National Union of Bookbinders and Machine Rulers, a special invitation is being extended to non-unionists, and it is pointed out that, if only they will organise, important concessions can be obtained. The national rule for qualification for membership has been revised, and for a few weeks the entrance fee has been reduced and immediate benefit will be paid. The opportunity should be specially welcomed by piece-workers, especially those on Government and London County Council stationery contracts. The Union contends that every bookbinder in London, on any class of binding, should be receiving not less than 35s. for a 48-hour week. Application for membership forms should be made to the Secretary (Mr. E. Friend), at 16, Devonshire-square, Bishopsgate, E.C.

By employing a woman bookbinder instead of sending books to a binder to be repaired and bound by contract, the Fulham Council has in six months saved £20, and proposes to give her permanent employment at £1 2s. 6d. per week. This important fact recently led the *Pall Mall Gazette* to publish a long interview article with an eminent public functionary of this sort. The young woman told the reporter that: "I started this work when I was a girl of fourteen, and have been at it ever since. I was apprenticed to a firm at 5s. a week. There were many other girls there, for nearly all the sewing is done by women, though very few learn the whole process of binding. It may take one to three years to learn the work, according to intelligence." She then went on to say that she preferred working in the library to working in the shop. The hours are from eight till seven, with an hour-and-a-half for lunch, half-an-hour for tea, and a half-holiday on Saturday. Also, she had no "stupid little apprentices" to teach. The amount of work done in a day varied. One day, if the books were not very thick, she would do as many as forty, and another day only about fourteen. Some books, like the cheap editions of the Bible, are not easy to do, as they are usually on very thin paper. "In the last six months I have mended exactly 1,066," she said.

According to a Parisian contemporary, the "Municipal Council of London" (presumably the L.C.C.) has asked the Master Bookbinders' Association in the French capital to furnish some details of the organisation of its technical classes,

The last two parts of our Belgian contemporary, *Le Musée du Livre*, contain a long article on "Modern Bookbinding," by M. Henri Liebrecht, apropos of the recent exhibition of art bindings at Brussels, referred to in our July Supplement. It is beautifully illustrated with forty-three reproductions of the finest bindings shown, printed in tints. Amongst them are eleven English examples, by Messrs. Cedric Chivers, Sangorski and Sutcliffe, J. and J. Leighton, and W. H. Smith and Sons. As it is always interesting to know what other nations think of our work, we present the following translation of that portion of the article which deals with the English bindings.

"If the English binders were not very strong in numbers at the exhibition," says M. Liebrecht, "they were at any rate strong in the matter of quality, for some of their specimens were quite beyond the reach of comparison. What beautiful vellum Cedric Chivers employs! Specially remarkable in this connection was the 'Knyght of the Towre,' bound in purple levant morocco, with ornamentation on vellum, designed by S. Poole in the mystic hieratic style affected by Fernand Knopff. The bindings of this firm are perfect in quality, thanks to the good standard of taste they have made their own and the sumptuous but at the same time sober style exhibited. Messrs. J. and J. Leighton affect classic bindings in irreproachable moroccos, or imitations of old bindings, in which they excel. Certain forms of panel decoration, ornamented with small tools, are very delicate, and of a simplicity well worthy of imitation. Amongst the bindings of Sangorski and Sutcliffe were some in superb levant moroccos, with brilliant but perfect colour schemes, lightly gilt and jewelled, such as the Thomas à Kempis, which may be contrasted with the happily-designed 'Story of Elayne.' Messrs. W. H. Smith and Sons, of Letchworth, sent some bindings of extreme beauty. I specially remember one, a copy of the 1687 edition of Chaucer, bound in greenish sealskin, with a mosaic of white flowers and reddish leaves, which was a work really unique. A volume of Shakespeare's Poems in plain morocco, with the boards covered with leafy spirals, was altogether a delicate and beautiful piece of work. There was a copy of the Sonnets, too, in plain green morocco, with a simple panel design on the covers, enclosing a fleuron with some inlaid flowers, which was really a delight to the eye." We may mention that in addition to the illustrations in the text of this article there are half a dozen fine separate plates of ancient and modern bindings of an exceptionally remarkable character, represented in the colours of the originals. Two are examples of that essentially modern Continental style, *cuir cisele*, in which the covers are decorated with inlays of coloured leather, cut and moulded to form pictorial or other patterns in taint relief. Still more bizarre is the binding of a copy of Ed. Picard's drama, "Le Jure," in plain leather, having on the upper cover a bust portrait of the harrassed-looking subject of the play, regarded from three of the four corners by grinning skulls. This is by Madame Mary Hellens.

Digitized by Google

It may be mentioned that the *Musée du Livre*—one of the most artistic of our Continental graphic trades contemporaries, is the official organ of the Maison du Livre at Brussels, which serves as the headquarters of some 40 organisations connected with the printing and allied industries, comprising in all upwards of 10,000 members. Last year's volume of the *Musée* contained 253 fine plates, very many of which are really works of art. The production of this beautiful publication (issued in quarterly parts) is in the hands of MM. Edm. Gregoir and J. van Overstraeten, to whom great praise is due for their share in this laudable work. By the way, the authorities of the Maison du Livre intend to organise, if possible, a thoroughly comprehensive Exhibition of Bookbinding, to be held in 1915. With this object in view, they will, it is expected, shortly invite the principal binders and schools of bookbinding, in all countries, to co-operate by furnishing representative exhibits in order to make the display a complete and perfect one.

Employment in the German bookbinding trade was rather slacker in November than in October, so that the percentage of unemployed trade unionists in that line, out of a total of 32,983, rose from 1·8 (in October) to 2·0, the same as in November, 1911.

The Swiss Bookbinders Federation has decided to agitate for a revision of the existing import duty on bound books. At present, it is said, tons of bound books are imported nearly every day, and are only subject to a trifling duty of 5d. per cwt., whereas bookbinding materials have to pay a much heavier tax, a state of things that presses hardly on the local bookbinding industry.

The operative binders in the Italian Province of Como have recently been conceded a new wages scale, which will continue in force for five years, till the end of 1917. A proportion of 50 per cent. of apprentices is allowed, and during the first three years of their term their pay ranges from 1¾d. per hour up to 3¼d., and during the second three years goes up to 4½d.; subsequently a regular rise every six months takes the worker up to the maximum, i.e., 5½d. per hour, although high-class finishers are expected to get more than this, by arrangement with their employers. Women are to be paid not less than 75 per cent. of the men's wage. The 9-hours day is observed, between 7 a.m. and 6.30 p.m., and there must be an hour-and-a-half interval at mid-day. Overtime is paid at from 30 per cent. to 50 per cent. above the ordinary scale, and Sunday work at 80 per cent. extra. A new scale for a similar period has also been put into force in Turin and district. The rates of pay vary but little from those at Como, the highest weekly minimum wage being 24s. 0d. and the lowest 10s. 9d. Ruling machine operators get the highest wage, and this is also the case with female workers, who can earn a minimum of 16s. 9d. weekly when thus employed, provided they are fully qualified; otherwise only 9s. 8d. to 12s. In other branches of binding (sewing, etc.) their minimum is from 8s. to 13s. One apprentice is allowed to three journeymen, two to four or five, three to from six to ten.

According to the last annual Report of the Norwegian Bookbinders' Union, for the year ended June 30th last, the organisation then contained 708 members in its eight branches. The Report states that the condition of the Union remains entirely satisfactory.

A dispute arose some time since between the New Zealand Bookbinders and Paper Rulers' Society and the employers at Wellington, and as the parties failed to come to any agreement, the matter was referred to a Council of Conciliation. The demands of the Society were for a week of forty-eight hours, the regulation thereof to be mutually agreed upon. "The minimum wage for competent journeymen, who are required to work the full forty-eight hours, shall be £3 10s. per week. If a journeyman be employed for less than a week's continuous employment, he shall be paid not less than time-and-a-third per hour." The usual provisions are made for overtime, holidays, under-rate workers, apprentices, and preference of employment to unionists. Up to the time of going to press we have not seen any account of the Conciliation Council's findings.

There is said to be a demand for bookbinders in Dunedin, New Zealand.

Having regard to the letter on Technical Instruction in Bookbinding, which appeared in our last Supplement, it may be of interest to mention the recent experience of a member of the Brisbane (Queensland) Master Printers' Association. He was approached by a would-be employe as a finisher in the bookbinding department of his business. First, the applicant stated he had fifteen years' practical experience, was a young man, yet knew all the intricacies of the trade, even to a thorough knowledge of the loose-leaf ledger; in addition, he had English references of the best kind. After further enquiries the applicant was engaged, though at the time resident in another State. To make a long story short, after every negotiation had been entered into, even to the paying of his fare, it ended up by the frank confession that he was not capable of doing the work he engaged himself for, which was most galling to the employer.

The series of articles on "Bookbinding for Libraries," by W. E. Reavis, which has been appearing in the American journal *Bindery Talk*, is continued in the November-December issue. The present instalment, the fourth, deals with "End-papers and joints." In the course of this article, the ordinary methods of "laced-in" and "split-board" are recommended for books well sewn on cords or tapes, but "a very considerable portion of the volumes which the binder of library books and magazines has to deal with cannot *or ought not* to be sewed in either such way. Instead, a through-and-through stitch—overcasting, whipstitch, Chivers', Holloway, or some other variety of this type of stitching—is required; and such sewing permits of a better attachment than through either cords or tapes, though by no means always (or even generally) employed. We refer to the sewing of a cloth strip (a free flap) to front and back of the book, employing the same stitches as sew the sections of the book. By this we mean that in sewing together the first and second sections of the book, the inner end-sheet, with its cloth strip, is laid in place and with the through-and-through stitches closely sew the end-sheet, first and second section together, so that the cloth flap of the end-sheet thus becomes an integral part of the book. This flap, when glued into split boards, makes the sewed leaves and cover practically one, so that only intentional destruction of the joint can part them. This method we have found satisfactory and practicable, and at the same time not too expensive for general use." The Editor has considered of particular interest to readers of *Bindery Talk* the article which appeared in the *Times* Printing Supplement, entitled "Bookbinding: Modern Methods and Machinery," from the pen of Geo. A. Stephen, Norwich City Librarian, and he has reprinted a considerable portion of it.

The Report of the International Brotherhood of Bookbinders (U.S.A. and Canada) for 1912 suggests that the subscriptions of members will shortly have to be raised. The accounts in connection with the publication of the Brotherhood's trade journal shows a debit balance of some £430 for last year: the funeral fund was only £11 behind, though the funeral benefit was increased from £10 to £15 in 1910; the organisation fund has a deficit of £2,270 on the figures for 1912, but the defence fund was nearly £1,500 to the good, owing to there having been very few strikes and lock-outs to contend with. The present scale of membership fees dates back to 1904.

On January 17th, the U.S. Congressional Committee, at Washington, gave a hearing

to those interests which are desirous of having the present Customs Tariff revised, as regards items concerning paper and print. James L. Feeney, of New York, representing the International Brotherhood of Bookbinders, asked that the provision in the present tariff law admitting books printed over twenty years ago free of duty be amended to provide that the books admitted free must also have been bound twenty years ago. Mr. Feeney said that ten years ago 1,000 men were employed in "art binderies" in the city of New York, and that to-day but 200 were so employed. He credited this condition to the practice of sending old books abroad to be rebound by "cheap foreign labour" and reimporting them free. Representations to the same effect were made by Mr. Brassil, of the Brassil Bindery at New York.

Works on Bookbinding,

For Employer, Craftsman, and Amateur.

To do good work and to keep thoroughly abreast of the times it is necessary for the employer and the craftsman alike to supplement workshop practice by the study of the literature of their craft. With the view of assisting those engaged in the bookbinding industry, the following descriptive list of current works concerned with their occupation has been compiled. Employers would doubtless find it conducive to good work if they had in their workshops a select library of technical works which could be consulted by their employes. We should be pleased to supply any of the works at the net prices affixed; the postage to places abroad would be a few pence extra.

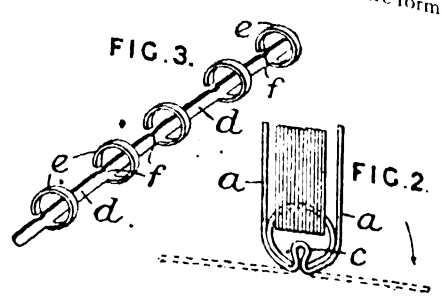
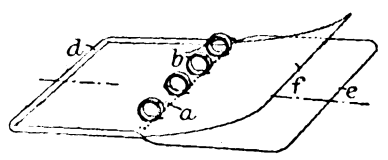
New Bookbinding Patents.

What is described as a new type of ledger, with movable interchangeable leaves, is the object of a recent French patent by Mr. A. A. Laurenson. The essential feature of the device is its simplicity and the small number of different parts. Another advantage claimed is that the entire volume can be utilised, *i.e.*, the dimensions of the binding and those of the contents correspond, so that no space is lost. Finally, the binding is durable and easily handled. Near the transverse edge of the binding (cloth, leather, etc.) on the back of the book there are two strips of metal, bent at a right angle, buried in the binding, and covered over. A flat bar is screwed on the vertical parts of these two strips, and two wormed pins are screwed through, one into the other. By screwing and unscrewing the pins by the aid of a little key, the leaves can be placed inside or removed to another place.



A patent by Mr. F. H. Sterling is for a file comprising fixed and movable wires or tubes 2, 3 of the usual type combined with punching apparatus supported within the wires by a punch plate 6, the upper end of which is bent as at 10 to form a gauge for the papers to be perforated. The punches 11 are adapted to work through perforated lugs, etc., 8, 9 on the punch plate and through perforations in the upper part of the gauge 10. The lugs 8, 9 may be formed by cutting and bending outwards portions of the punch plates. The



punches 11, which may be made in pairs by bent wire, are normally spring depressed, but are adapted to be operated by a lever 13, an extension 15 of which bears on a frame, etc., 12 which carries the punches. The movable filing wires 3 are operated by a similar lever 5 mounted on the other side of the punch plate. In apparatus in which several punches are used, a series of levers corresponding in shape to the extension 15 may be pivoted at intervals across the punch plate, and be linked together so as to be operated in unison from a single lever 13. The lever 5 may similarly serve to operate a number of movable filing wires. The apparatus may be simplified for use with a single punch.

In a loose leaf binder, the invention of Mr. E. H. Elder, special means are provided for attaching the filing parts to the cover. The flexible back of the cover *a* is bent up along the hinge line to form a rib *c* which is gripped between the open ends of split filing rings *e* and the edge of a back piece *d*, on which the rings are preferably integrally mounted. The back piece *d* is notched at *f* opposite the ends of the rings *e*, and these ends and the notches are preferably rounded. Mr. Elder has also patented an invention in loose-leaf binders of the type in which the leaves are held on rings connected by a bar, etc.; the rings are formed

by bending up alternately long and short arms *b* on the bar *a* into split ring formation, the splits in the rings being staggered. The

bar *a* is bound into the covers *d*, *e* underneath the lining *f*, which is perforated for the passage of the rings.

All new ruling machines should run a few days with a slack blanket and apron, and be oiled twice a day, says an American authority. This is done for all parts to find their bearings. To keep the ruling machine in good running condition, put a drop of oil in each socket once a day, and clean the sockets with naphtha at least three times a year. Too much oil in the sockets will work out on the rollers, saturate the cords or strings and soil the paper. Thumbscrews were made to tighten with the hand and not with a wrench. Using a wrench will split the clamp. The sun should not be permitted to shine on the machine, as it might warp the rollers and contract the blanket. If cloth runs to either side, adjust it by tightening the end to which it runs. Belts must be tight, and the apron or lower cloth loose enough to prevent the cord from indenting the paper. Rollers over which the ruled paper passes must be covered with blotting paper to prevent smearing; it should be renewed three or four times a year. When the ruling machine is not in use, cover the blanket and ink bowls. A fixed rule in all establishments should be to cover the machine over night. This will prevent dust from settling on the blanket and in the ink bowls.

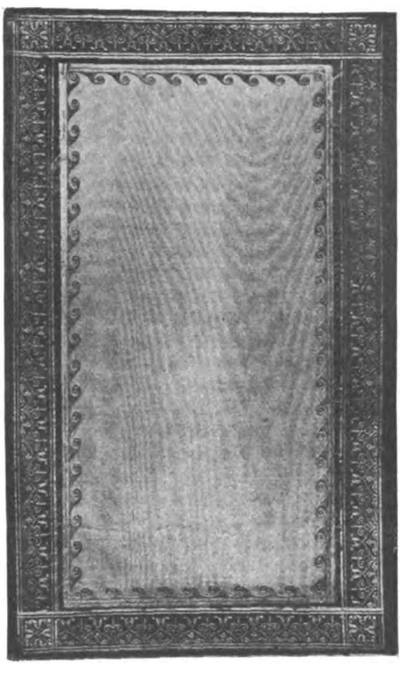
THE CENTENARY OF A London Binders Price Book.

For some time past efforts have been in progress in America, and—more recently—in this country also, to establish a uniform price list for all classes of binding work, in order to avoid, not only mere wilful "cutting," but likewise errors in estimating, which often lead to the loss of profit.



The "cost system" advocates mostly claim that their methods are quite new, but although this may be the case in America, or in fact generally so far as the means of arriving at the standard prices are concerned, the regulation of prices in the bookbinding trade was an object of solicitude centuries since. In our Supplement for April last we gave some particulars of the prices agreed upon by the London trade as far back as 1695. This was apparently only a rough-and-ready sort of scale, but as time went on much more elaboration in matters of detail was successfully initiated. The older prices being then largely out of date, it was felt desirable, in the early part of last century, to compile an altogether new list, and accordingly the binders of London and Westminster put their heads together with that object in view. A fresh scale was ultimately drawn up and submitted to a general meeting of the trade, held at the "Crown and Anchor" Tavern in the Strand, in December, 1812. Being approved of by that assembly, it was ordered to be put into force from the commencement of 1813. Thus it is now just a century since this "Bookbinders' Price Book" was first introduced to the trade at large. It is an octavo volume of some 50 pp., and was published at half a guinea, a big price for so small a volume, but of course its circulation was limited and the cost of composition considerable, as it consisted almost entirely of tables. The "Associated Master Bookbinders of London and Westminster" were responsible for its production, and it appears from a list of names which follows the title-page that no less than 159 firms were pledged to charge out their work according to the rates quoted. Some names still familiar in the trade appear in this catalogue of a hundred years ago, including Bohn, Egleton, Kitcat, Leighton, Suttaby, Westley and Burn, as well as others like Kalthoeber, Staggmeier, and Lewis, now better known to the collector of fine bindings of early nineteenth century date.

Although bookbinding operations are much more extensive to-day than they were a century since, the enumeration of them in a detailed price list would not occupy anything like fifty pages, but the bulk of the Price Book of 1813 is accounted for by the fact that it was on particular and not general lines, *i.e.*, the tables were merely lists of "Precedents," or rates which it was determined to charge for binding certain named books, it being understood that volumes of similar dimensions, both as regards size of page and thickness between covers, would be charged to the customer at the same rate. The first 30 pp., therefore, are occupied by lists of books, commencing with one for "32mo. to medium 12mo.," and following up to "Atlas Folio to large royal 8vo." Then follow some tables of "Miscellaneous Precedents," after which come prices for binding school books, bibles, prayer books, reviews, magazines, newspapers and music, the volume closing with rates for gilding and blacking paper and cards, and for insetting plates or cancel leaves, or tissue paper.

No useful object would now be served by repeating any of the tables here, quite apart from the fact that even one of them would occupy two or three pages of this Supplement.

A Binding of 1813.

but it may be of interest to give one or two typical examples of the method of arrangement adopted. For this purpose, we will take the table of crown 8vo. to medium 8vo. sizes. Works of these dimensions were sorted out into five classes, viz.: Crown 8vo., royal twelves, copying 8vo., demy 8vo. (nearly as long as all the others put together) and medium 8vo. Each of these classes was again subdivided, according to the number of sheets contained in the books enumerated in it. Thus in "royal twelves" we have "Wilkes' Letters," and "Junius" (2 volumes), of 15 sheets each; "Hudibras," and "Coelebs" (2 volumes), 20 sheets each; and Richardson's "Correspondence," 25 sheets. The number of pages in the volume varied, according to whether it was made up of whole or half sheets, the latter containing one-sixth less in number of pages, on account of the extra folding and sewing. The "number of pages" included title, contents, preface, dedication, index, etc., and if it exceeded one page more than the number given in the tables, then it fell into the next class, and this was also the case if the book exceeded, by more than a half sheet, the number of sheets allotted in the table. In sets of books the average was to be taken. All the works mentioned above, except "Coelebs," contained plates, so that of course the charge for dealing with these, if more than four, was added to the cost of binding. This charge, in the case of 8vos and 12mos, was, for from 5 to 8 plates, 1d., 9 to 16, 2d., 17 to 24, 3d., and so on in proportion. The variety of styles of binding quoted for in the "Tables of Precedents" is much greater than usually occurs in a modern binder's price list. For an example, we may take Richardson's "Correspondence," just referred to, which was set down as containing 612 pages if made up from whole sheets, or 512 if from half sheets. The rates quoted are presumably trade price, *i.e.*, those charged to the booksellers, who seem to have been in agreement with the binders on the point. For binding this royal 12mo volume, then, the following prices were to be charged, and of course they applied to any other book of similar dimensions and bulk:—

	s.	d.
Morocco elegant, bands and loose (i.e., hollow) backs, g.e.	9	3
" " and bands, g.e.	9	1

Sheep, rolled and lettered, double paper, good boards	1	7½
Extra boards		7
Common boards		6
Brown calf, charged extra		2
Graining		6
Rebound books		2

In this long and minutely detailed list we have an enumeration of all the styles of binding in common use 100 years ago, save vellum, perhaps not alluded to as being rarely called for. Cloth is, of course, not mentioned, its introduction to the trade not taking place till some seven or eight years later. In the case of small job work, gilding the back of such a royal 12mo. volume would cost 4d, or merely lettering it 3d. A few definitions may be of interest. Books bound in "calf half-extra" were to be forwarded carefully, lined with common marble paper, provided with two coloured silk head-bands, narrow rolled round the sides, and plain rolled inside. "Calf extra" had three coloured single silk head-bands, was lined with better marble paper, and narrow rolled inside and out. "Calf super extra" had double head bands, broad instead of narrow register, and had two narrow rolls or one broad roll for outside decoration. If hollow backs were made on "extra boarded" 12mos. a halfpenny extra was charged, as it was also if a sheep board binding was provided with four leaves of paper at beginning and end. Fancy bands were charged as double bands, and filleting 12 mo's cost a penny extra, and the same was the case if a book was bound in red sheep. Guarding plates was double the price of folding; 12mo.'s provided with leather joints cost about 2s. extra. Very large books were expensive to bind, even in the commoner styles. For example, a super-royal folio Oxford Bible cost 23s. to bind in rough sheep, or 21s. 6d. in rough calf: a royal folio Common Prayer Book 15s. 6d. and 14s. respectively, or 7s. 6d. in sheep, though 24mo.'s cost only 1s. 3d., 1s. 2d., and 7½d. in those styles. There were only four quotations for binding newspapers. The *Times*, half yearly, half bound in calf or basil, and gilt lettered, cost 10s. 6d. To make a portfolio with basil back and corners, in size 2 ft. 5 in. by 2 ft. 1 in. (atlas), cost 10s. 6d.; crown size, 4s. 9d.; or half-crown, 2s. 2d. Only a few styles of binding were quoted for magazines and reviews, *i.e.*, half russia or calf, gilt, calf or half russia lettered, and half calf, lettered. A number of school books were listed, but only one style of binding was referred to in connection with them, *i.e.*, sheep, filleted, and the highest price quoted, for a demy 8vo., was only 1s. 8d., except for those with plates, which cost a few pence more. Music was then generally bound in the same style, at a cost of from half-a-crown, for a volume containing 24 royal 4to. pieces, to 7½d. for six foolscap 8vo. ditto. "Song size" cost from 3s. 6d. to 4s. 6d., and old made-up volumes

of large music from 5s. up, according to thickness, condition, and general trouble.

So far as can be judged from the lack of detail in the older list, the cost of ordinary binding for a royal 12mo. volume had increased from 8d. in 1695 to about half-a-crown 118 years later. To-day, 100 years later still, it would cost in the neighbourhood of four shillings to do such a job, according to circumstances. If full bound in best morocco it would cost about three times as much, as compared with the nine shillings of a century since, and this 33⅓ per cent. increase seems to largely represent the difference between the leather binding prices of our time and those of the latter end of the reign of George III.

The accompanying illustrations have no connection with the price book, but are printed here as examples of bookbinding in 1813. The volume is a copy of an edition of Cotton's Poems, published in London by Lackington in 1808, but as the fly leaves used by the binder bear the watermarked date of 1813, his work may be referred to that year. The size is the "royal 12mo." referred to in the price book, and the material used is olive green morocco; the roll borders are gilt, but the ornament in the centre panel of the outer cover is stamped in blind, probably from a single die, gold dots being placed at the points where the lines of the pattern intersect. The inner panel of the doublure is of pale blue silk.

Some Notes on Edge-Gilding.

The theory of edge-gilding is known to most forwarders, but to become a good edge-gilder requires a great deal of practice and a proper and thorough knowledge of the various processes necessary to the making of a perfectly gilt edge. Then again, a good knowledge must be possessed of the different classes of paper. At one time all paper was much the same so far as the gilder was concerned, but year by year his task becomes heavier, as new classes of paper are continually coming on the market, and I am afraid if some old-time gilder were to come back to earth again he would get a fright on seeing some of the stuff books are nowadays printed on. The object of this article is to place before readers the proper way to make the size required in this operation, and also to give particulars of a little-known size which gives excellent results. Many members of our craft are quite at sea when asked to mix up a dish of size, though they can use it all right when it is mixed up for them. Even among gilders in large shops I have found that one man mixes up all the size for the others, and in one special instance the preparation is a secret one, known only to one man in the shop.

The size most commonly used is made with the white of an egg, to which is added three-quarters of a pint of water, the whole then being well beaten up, until the egg is thoroughly mixed with the water. It is then allowed to stand a few hours, when it is strained through a fine piece of linen and a few drops of spirits of wine are added, which helps to deposit any fleshy particles of the egg remaining in the size. In some shops where the finishers use albumen, the gilders often use the same stuff, which is made up in the same manner as the foregoing, but in my estimation is not nearly so clean as the white of egg.

Another size, but one which is not much used, is made with vellum cuttings, which are placed in a pan with water covering them, and allowed to simmer for several hours, until the vellum has become dissolved in the water. It is then allowed to cool, when it forms a kind of thick jelly, a piece of which, about the size of an egg, is then taken and mized with water to the requisite strength. This makes a very good size for certain classes of paper, but entails a good deal of work in its preparation.

The last size I would here draw attention to is one that I myself am very partial to, and which I find to work well on all classes of paper. It is made with flake gelatine, and is exceedingly clean and economical. For twopence from 18 to 20 cakes of this gelatine can be purchased at most chemists, and as half a cake makes as much size as an egg, for your twopence you get the equivalent of from 30 to 40 eggs, which is a great saving in itself. As this size is not known to any great extent throughout the trade, the following explanation of its preparation may be of interest to readers, and the writer can confidently recommend gilders to give it a trial. A half cake of the gelatine is placed in a jar, and about three-quarters of a pint of water poured over it and stirred with a clean folder, while the water is being added. Care must be taken that the water is boiling, as it needs to be so in order to dissolve the gelatine. When the water strikes the gelatine it turns it a dirty straw colour, but as it dissolves that entirely disappears, leaving a beautifully clean and pure liquid, which is immediately ready for use without the addition of spirits of wine. This size remains in good condition for an indefinite length of time, as I have experimented with it after keeping it for over three months and find it work just as well.

The solidity and burnish of a gilt-edged book constitutes its great beauty, and while the burnishing has a great deal to do with the brightness of the edge, unless a perfectly clean size is used no amount of burnish will produce a perfect edge. These few notes are penned with the hope that they may prove of some use to members of our craft, and help them over what may at times have been to them a source of difficulty in the producing of one of the most important parts in the binding of a book, at least from the customer's point of view.

ANDREW CURRIE.

Tipping Maps into Books

BY

MACHINERY.

By JOHN J. PLEGER, MANILA.

Since the impetus given manufacturing by the invention of machinery, hand labour is dispensed with wherever possible. Yet we find there is in many binderies labour performed by hand which might be done with machinery. Very often machines do work not designed for them by their manufacturer. With a proper understanding of both hand and machine methods, a machine could do the work which is now done by a long tedious process of inserting stubs and whipstitching by hand. Books containing maps have the thickness of the folded map on the binding end taken up by stubs from one-half to three-fourths of an inch wide. Such books are far from attractive, and look awkward, to say the least. Where the maps are longer than the book-page, a common method employed is to cut out about three-fourths of an inch of the binding end of the map, leaving the bottom end one-half of an inch smaller than the page uncut: they are then folded and tipped in after the book is bound. If folded maps exceed one-eighth of an inch in thickness, stubs are provided by cutting strips of paper and glueing them together on the edge, then

sewing them in the place of the map by means of an overcast or whipstitch. To trim the book, fillers must be inserted and the forwarding is then done in the usual manner. This, at any rate, is the American practice. Many binders are of the opinion that the bottom left end of the map must be tipped into the book, presumably to enable the book to remain on the desk or table when the map is opened out. This may be true, provided the map is not larger than the desk or table, in which case this method has no merit. This method on side-stitched pamphlets containing one or two folds for the length necessitates tipping the map in before or after the pamphlets are trimmed. To save the tipping on all side-stitched pamphlets containing thin maps, cut out the bottom left end of the map enough to clear the binding space, or about three-fourths of an inch. The distance from the head to the cut is one-fourth of an inch inside of the length trimmed margin. The first fold is close to the cut-in edge, the second three-eighths of an inch from the head, and the third even with the first fold. In adopting this method the map can be gathered or inserted without the danger of trimming the folds, and the unsightly tipping in of maps in side-stitched pamphlets after the work is completed is eliminated. A common method on side-stitched pamphlets containing a number of large maps is to trim the text and supply the thickness of the maps with stubs one-half to three-fourths of an inch wide on the binding end. The maps and stubs are put in place and the book stitched. This, besides being a very slow method, is hardly in keeping with the progress of the times and the oft-heard phrase that "time is money." There are obsolete signatures in all binderies, and these can be utilised to good advantage as fillers by perforating them one-half to three-fourths of an inch from the fold and gathered in sufficient number to take up the thickness of the folded map. Thus prepared the books can be sewn on a sewing machine or stitched, and the necessity for fillers is obviously eliminated. After the books are bound, the places provided for the maps are cleared at the perforation, leaving the regulation stub to take up the thickness. The maps are tipped on the stubs at the left end, the top even with the head of the book and the bottom end cut-in about three-fourths of an inch; the distance from the top of the map to the cut is one-fourth of an inch inside of the length of the trimmed margin, the first fold is close to the cut-in edge, the second three-eighths of an inch from the top, and the third even with the first fold; this to be repeated until the entire length of the map is folded. The width is folded three-eighths of an inch inside the front trimmed margin and back to the cut-in edge; this is repeated until the entire width is folded. A tremendous saving of time is thus effected on small maps which can be inserted in side stitched pamphlets, as well as in sewed, by substituting machine for hand work, and in forwarding by eliminating fillers and handling it as regular work. The edges and stubs present an even appearance, and what was once considered an awkward looking book is transformed into one which is easy of access and invites perusal.

How to Estimate for Pamphlet BINDING.

We had occasion in our December Supplement to refer to the differences between the various binding-cost experts, in the matter of prices, and the same is of course the case with the binders themselves. This was pointed out recently by our New York contemporary, the *Printing Trade News*, in dealing with an enquiry sent in by a Pennsylvania printing and binding concern, for "correct charges" for binding a price list with cover. It is questionable, says the *Printing Trade News*, whether there are two binders in the United States who would agree as to the selling value of this work. Certainly there are no two binders who would agree as to the method of arriving at the selling price and the price itself. Here are the specifications:—

32 pages and cover; saddle stitch, three wires. Kindly give us your opinion on the correct charge for binding 25,000 of these; forms run to the best advantage, which would be 25 by 38, 16 pages to the sheet.

The binder says the best way to run this is on a sheet 25 by 38. If this applies to the binding proposition only, it may be correct; but in a large city many printers would find a better way. At the present time, however, we are only interested in the binding and will pass the printing queries which naturally arise in a little problem of this kind.

The size of the trimmed sample is 12 by 9½ inches; the job was run in four 8's, or 16 pages on a sheet, and one 4-page sheet. That means that a 4-page insert was collated into two 16's, and the 36 pages thus collated were inserted in a cover and then secured with three wires, trimmed, packed and delivered.

The bases for all this work, as established by the Cost Committee of the Ben Franklin Club of Chicago and the Cost Committee of the Binders' and Rulers' Club of Chicago, are as follows:—*

Folding—One-fold, 27 cents per 1,000; two-fold, 70 cents per 1,000; three-fold, 95 cents per 1,000; four-fold, 1 dollar, 25 cents per 1,000.
Gathering—27 cents per 1,000 sections.

The folding of the 16's means a three-fold for 50,000 sheets. This would ordinarily be done on a machine; hence, the hand prices would be reduced from 95 cents to about 80 cents per 1,000. There is then left the folding of the 4-page insert—one-fold—and the folding of the cover; a total of 50,000 one-fold at 27 cents per 1,000. This can be reduced on account of quantity to 25 cents.

The next process is the gathering or collating, which should not be figured at less than 25 cents per 1,000 sections. As there are four sections in the price list, the result cannot be much less than $25.

The Committees previously referred to recommend 27 cents per 1,000 sections for gathering.

The next item is stitching, and again the scale of the Cost Committees should carry

* We have allowed these prices to stand, although being very much higher than British quotations, they will be of little or no use to the British reader. It is of course the methods followed in applying them that give most interest to this article (1 dollar, i.e., 100 cents = 4s. 2d.).

Bookbinders' MACHINERY and SUPPLIES

We have a very fine range of machinery for the Binding Trade, and solicit your enquiries. We can meet all your requirements whether large or small.

Caxton-Beatrice Blockers

Made in England from the original patterns—not a German imitation. Four supports to head, sliding feed table, powerful inking system.

Caxton Rotary Perforator

For run-through and stop work. Gives a clean reliable, slot-like perforation. Easy to adjust, speedy in operation.

Stitchers, Cutters, Presses

Large and small, hand and power.

JOHN HADDON & CO.

Specialists in Labor-Saving Machinery.

SALISBURY SQUARE, FLEET ST., LONDON, E.C.

Digitized by Google

some weight. These made the following suggestion as to stitching:—

Saddle Stitching without cover, two stitches to pamphlet, 60 cents per 1,000, pamphlets consisting of one section, with raise of 15 cents per 1,000 for each additional section. Additional stitches, 20 cents per 1,000 stitches.

Hence, we get 60 cents per 1,000 for the first section, and 15 cents per 1,000 for each additional section. In this case there are three additional sections, or 45 cents per 1,000. The additional stitch is 20 cents per 1,000. Now we have a total of (60c., 45c. and 20c.) $1.25 per 1,000 pamphlets. This can be cut 10 per cent. for quantity, and the result is $1.12½ per 1,000 for stitching alone.

We now reach the trimming, and the Cost Committees referred to suggest

65 cents per 1,000 pamphlets up to 32 pages, with raise of 15 cents per 1,000 on each additional 16 pages.

This recommendation is not quite so clear as it might be. If the trimming of 32 pages is worth 65 cents per 1,000. 36 pages and cover—a total of 40 pages—will be worth 75 cents per 1,000; this, less 10 per cent. for quantity, will be 67½ cents per 1000 for trimming.

Then comes packing and delivery, which for 25,000 copies—7,000 pounds—is easily worth $3.

All these bases of selling prices are figured on pamphlets up to 6 by 9 only. The Cost Committee's scales are for pamphlets up to 6 by 9; for larger sizes, up to 10½ inches, add 10 per cent.; over 10½ inches, add 20 per cent.

We will now tabulate the entire job of binding as follows:—

	Dols.
Folding, 25,000, at 80 cents	20.00
Gathering, collating, or inserting, 25 cents per 1,000 sections, four sections to book	25.00
Stitching, 25,000 price lists, at dols. 1.12½ ...	28.25
Trimming, 25,000, at 67½ cents	15.75
Total, for pamphlet 6 by 9, or smaller	89.00
20 per cent., for pamphlet over 10½ inches...	18.00
Packing and delivery, over 7,000 pounds ...	3.00
Selling price	110.00

Some few binders would ask $125 for this job. Others would do this work for from $50 to $100.

A Cost System for Bindery Plant.

In the Bookbinding Supplements for October and November last we dealt with the advantages of a "cost system" in the bookbinding business, and gave examples of its working. Those former articles, however, mostly dealt with labour, whereas the following is devoted to binding machinery. It formed the substance of an address delivered recently before the Missouri Valley Cost Congress, by Mr. F. S. Crane, of Crane and Co., Topeka, Kansas, U.S.A.

The cost of bindery machines seems to have been neglected by the cost experts, or rather there has apparently been no attempt, except by scattered individuals, to consider the matter in the proper light. As the company with which I am connected has used a cost system of some kind for a great many years, and I have devoted a great deal of time and thought so bindery machines, I feel that I can say something on this subject which will be new. For a good many years I made an effort to find out how others ascertained their costs, and charged for the output of bindery machines, with unsatisfactory results. I have read lots of books and articles in trade journals and other publications that have come to my attention, and unless I misunderstood the recommendations of those who have written on the subject, none of the authorities tell *how* to find the cost, or if they do, they simply apply the same rate to every machine in the bindery, without regard to cost of machine, floor space occupied, power required, or the number of hours the machine is kept busy. Practically all of those who have written on the subject have said in effect, "Find the hour cost of your machines, and charge the machine rate for that class of work." You have all noticed from time to time in the trade journals and other publications, reports showing the cost of "hand work" and "machine work," without making any distinction between different machines. As I understand it, the same rate is to be charged for every machine used, no matter what the actual cost may be. While I do not claim that our method of handling the problem is perfect, I do believe that it is more nearly correct than any other I know of, and every printer ought to give the matter careful thought, and make a charge of some kind based on each machine separately, instead of establishing a rate to be charged for all machines. In the first place, we use a Daily Time Ticket with a column provided to show the number of the machine used on a given job. Every machine used in the factory has a number, and the cost clerk each day transfers from the time tickets to a special form the productive time of every machine in the factory. On some machines, like a folder, we keep the time of setting the machine and the running time separate, in order to keep a record of the average output while the machine is running, but in our record of productive hours we credit each machine with all the time charged to the customer. Using these figures as a basis, we consider each machine as a separate department, and when we make a charge we add to the hour cost of each machine the hour cost of the operator. In our Statement of Cost (familiarly known as Form 9-H) we use four columns for the bindery: "Class A" covers the finishing-room only; "Class B" covers forwarders and others whose wages are $12 or more per week; "Class C" covers employees receiving less than $12 and more than $8 per week, and "Class D" covers all those receiving $8 or less. The bindery department in our Statement of Cost includes small machines such as round-corner cutters, hand numbering machines, etc., and also includes the hand backing machine, hand board cutter and other machines used frequently, but often only one or two minutes at a time. We treat these machines as "tools," and the interest, depreciation, etc., are taken care of accordingly. In all departments except the bindery the time tickets are made out in 6-minute units, but in the bindery we use hours and minutes, because of the very many operations requiring less than a unit of time. Each of the following machines we carry as a separate department, and use a special form in arriving at the hour cost of those machines: Cutter, folder, rotary perforator, hand perforator, small wire stitcher, large wire stitcher, patent stub-sewing machine, pamphlet sewing machine, book sewing machine, gathering table, power paging machine, book trimmer, crimper, creaser, rotary board cutter, gold embosser, ink embosser, power punch and signature press. All machines using power, as well as some of the hand machines, are carried on this sheet. Depreciation, rent, taxes, insurance, power and gas, and machine expense (such as repairs, wire, thread, etc.), are charged to each machine, and from our record of productive hours we arrive at the actual cost of each machine on the floor. The cost of power and gas depends on the number of hours in operation, and we charge the actual cost each month, having ascertained the exact cost per hour of power and gas required by each machine in the factory. Up to this point we have simply used the necessary forms and done the necessary work to find the actual cost per hour of each machine, independent of the operator. Sometimes a Class B employee will use a machine ordinarily operated by a girl or boy who belongs to Class D. In such cases, the person making the price on the complete work uses his judgment in adding the cost of the operator to the machine cost, but as a rule the cost of the operator is figured at the rate of the class which would ordinarily handle the work. In other words, if the boys or girls in Class D should be very busy, and an employee in Class C have very little to do, we would have the Class C employee do the work, but we should charge the customer at the Class D rate. The phase of the question which has always puzzled me, and on which I have been unable to get any information from others, is *how to charge for the machine.* Should we make a charge based on actual cost, or not? Should we establish an arbitrary rate on each machine and disregard the cost, or not? Some years ago we manufactured school books in large quantities, and to cheapen the cost of manufacture purchased machines which are seldom used in a bindery doing ordinary commercial work. We have school book plates and copyrights, but still make a speciality of edition work of all kinds, and print and bind a good many books each year, although this work does not keep these special machines busy very much of the time. Of course, the customer whose work requires the use of these machines should pay for them, but should he pay an exorbitant price because of the fact that we do not have enough of that class of work to keep the machines busy a reasonable proportion of the time? To illustrate, we have a rotary board cutter which will cut six or eight covers for small books at one operation. This machine was actually running only fifty-one hours last year, and the cost per running hour was 72 cents. We have other machines on which the cost is abnormally high, because of the large amount of standing time. Probably nearly all of you have one or more machines which are considered necessary to your business, but which stand idle a great deal of the time, and you do not know how to charge for them when they are used. It is not right to charge the same rate per hour for a wire stitcher costing $200, and used 900 hours per year, that you charge for a book-sewing machine costing $1,000 and only used 500 hours per year, yet that is just what you do if you follow the suggestions of the cost experts, unless I have misconstrued their instructions. We have solved the problem in a way by establishing an arbitrary rate for each machine. This rate is determined partly by what our competitors charge and partly by the number of hours we consider the machine *ought* to be in operation. If the cost amounts to more than the earnings we throw the difference into the "overhead" or "miscellaneous" expense of that department. For instance, in the month of October the working of the embossing and stamping machine costs $8.99. The machines earned (at 15 cents per hour for one and 25 cents per hour for the other) $4.75. The difference of $4.22 was added to the miscellaneous expense of the department. The same idea is carried out with all the machines in the factory. Many will offer the objection that this is wrong; that the man whose work does not require machines should not be charged with machine expense. There is no question about the objection being a proper one, just as much as the objection to charging all machines at the same rate. Our method of handling it is offered only as a temporary solution until something better is evolved, or until there is a uniformity of charge all over the country. I believe that there should be a standard charge for practically every operation in the business. A national organisation, receiving reports from all sections of the country, could ascertain the average cost in each section and establish standard prices to be charged by every one in a given locality, no matter what the costs of the individuals were. If any individual could operate a machine at a less cost than standard, the added profit should go to him for his ability.

A MACHINE for stamping or printing on the edges of books has recently been invented by Ex-Mayor John Robinson, of Colorado Springs, U.S.A. It will be valuable for printing advertisements on the edges of directories and for indexing Bibles and other books of many pages. The printing of such advertisements on edges, as now done with a rubber stamp, is a slow hand process, but it is claimed for Mr. Robinson's invention that it will print on the three edges of a book of any size at a rapid rate, and that coloured edges and even gold leaf can be applied with the same device.

You have an unusual opportunity to reach the Office Equipment Dealer, Retail Stationer, and Purchasing Agent—through ONE medium—the

Inland Stationer

The BUSINESS EQUIPMENT JOURNAL.

An examination of the magazine itself shows you why.

The Office Equipment Dealer and the Retail Stationer subscribe to it because it handles the selling end of their lines in a business like manner. Every issue contains articles of sales plans of real practical value.

The Purchasing Agent subscribes to it because it keeps him in close touch at all times with the latest and best developments in business equipment.

You can reach all three with ONE advertisement and at ONE price by using ONLY *INLAND STATIONER*—BUSINESS EQUIPMENT. Let us send you some important facts.

The First Cost Congress.

A PRONOUNCED SUCCESS.

THE OFFICIAL COST SYSTEM APPROVED.

A Campaign to be Organized and a Cost Congress to be held Annually.

THE First British Printers' Cost Congress was held last week, under the auspices of the Federation of Master Printers of the United Kingdom, the first day's proceedings of which were briefly reported in our last issue. The amount of support and enthusiasm it received surpassed all anticipations, so much so that the fine Kingsway Hall, had to be substituted at the last minute for Stationers' Hall, where it was originally intended to hold the Congress, owing to the large number attending, amounting to nearly 1,200. The Congress assembled at 2.30 p.m. on Tuesday, 18th inst., when the chair was taken by Col. W. Wright Bemrose (President of the Federation of Master Printers), who was supported on the platform by Messrs. W. Howard Hazell (Hazell, Watson and Viney, London), J. E. T. Allen (Taylor, Garnett and Evans, Manchester), Harry Cooke (Alf Cooke, Leeds), J. Forman (T. Forman and Sons, Nottingham), Cecil B. Johnson (Ben Johnson and Co., York), C. Herman Lea (Wertheimer, Lea and Co., London), R. A. Austen Leigh (Spottiswoode and Co., London), W. A. Waterlow (Waterlow Bros. and Layton, London), Arthur C. Roberts (Roberts, Wright and Co., London), accountant to the Federation, the foregoing being members of the Costing Committee; also Messrs. W. A. Clowes (Wm. Clowes and Son), President of the London Association), W. B. Blaikie (T. and A. Constable, Edinburgh), President of the Scottish Alliance, A. F. Blades (Blades, East and Blades, London), and Reginald J. Lake and E. Taylor Thomlinson (secretaries).

The Chairman extended a hearty welcome on behalf of the Council and the Costing Committee to the master printers and others present, and said the letters he had received from master printers unable to attend were too numerous to read or even give the names of the writers. They came from the remotest corners of the United Kingdom—all sympathetic, and many offering assistance in money or in other ways. The Chairman then proceeded to read the following paper, entitled:

"The Necessity of a Costing System: What we Expect from its Universal Adoption."

I. Your attendance here shows that considerable interest is now being taken in the question of Costing and the necessity of some action being taken to increase the profit-earning capacity of our trade. The difficulties we realise to-day are nothing compared with those we shall have to face if we do not speedily amend our present methods of doing business.

II. I have an idea that we should not congratulate ourselves too freely at this stage, for should we not have taken up this all-important question of Cost finding long ago, before our difficulties became so acute? Let us rather make up for lost time by being thoroughly in earnest now we have met to consider the present unsatisfactory state of our trade.

I do, however, congratulate those houses—and they are steadily increasing in number—who have put in a Costing System, and more particularly those of them, who, after realising the benefits to be obtained, have so persistently placed their views before our trade, and have at considerable personal inconvenience, worked the whole question out for the guidance of the trade generally.

III. Before we can put our trade on a better footing we must have closer and better business relations with one another, mutual respect and confidence within the trade, and what the Americans call "horse sense" in our dealings. I look to a friendly exchange of ideas during this Congress.

Let us at the commencement fully realise that no Costing System—no matter how good—will work itself. It must be carefully adapted to the particular business, and introduced without haste, so that the staff may understand its working, and the employees realise that it is not against them, but for their interest as well as for that of the house.

Whilst the introduction of a system will soon be of immense advantage in the working of any business, yet we shall not realise our larger anticipations of a better state of things generally unless and until Costing Systems are adopted very extensively throughout the trade—let me emphasise this. It will be better for the trade if a large number of houses adopt some system, although they slightly differ in detail, than if few houses only adopt a uniform system. We must have combination and unanimity of action if we are to succeed.

IV. This movement is largely an educational one. We can all learn something, for scientific costing, apart from estimating—which are two separate things—is largely an accountant's business, and has consequently often been neglected by printers. Let us look out for the best suggestions that may be offered, and assimilate all there is to be got out of them. The knowledge of what others are doing will enable us to act together, and this is all important in any trade.

Need anything further be said to convince us of the necessity of accepting the Committee's suggestion, as amended at this Congress? We have all suffered from the present unreasonable practice of careless estimating and the cutting of prices, a practice which aims at seeing how little we can do a given work for, instead of ascertaining its proper value—a practice which continually results in reducing former prices, and must go on doing so, irrespective of whether they were formerly remunerative or not; a practice which takes no account of the continued increase in costs of production; a practice which is quite worthless, haphazard, and misleading; a practice which does not even give satisfaction to the customer.

V. We must remember it is the lowest prices which rule the market. We all know of cases where undercutting has only resulted in spoiling the price for the firm who have previously done the work, because they frequently retain it, but at a lower price. How, under such circumstances, can good service be given to the customer?

We are often under the delusion that it is our customers who reduce prices. May I suggest it is we ourselves who hammer each other's prices down, and the customer merely takes the favourable opportunity of getting his work at lower prices.

There need be no fear, on the part of our customers, that the introduction of a system for the better working of our businesses will materially raise prices. There will still be far too much competition to allow of this. But no one should take exception to the competition being on fair and reasonable lines.

Some increase in price must inevitably occur, as in all other trades. We printers are not magicians, we cannot evade the universal increase which has occurred in the cost of production in all products, nor will our customers expect it. What we must attempt is to give a better service to our customers, and this can best be obtained by the disclosure of defects in management, the more accurate allocation of cost to the individual order.

Thus, and thus only, can we expect to give a good service, without those extremes in price, which cause our customers to lose confidence in us, and are frequently responsible for bad work and bad feeling.

May I, for a moment, also look at this question from the employee's point of view? He should realise that it is well to be employed in a trade which is in a healthy and sound basis. He himself pleads that commodities have increased in price; he also knows that wages have constantly increased, and that hours have been reduced.

These increases in cost affect printing, as well as other manufactured goods, and it is therefore obvious that all reasonable steps must be taken to put the trade in a better condition to meet these additional costs, and that the prevention of anything injurious to the trade is to his benefit as well as to his employer's.

We ask our employees' co-operation, if only for the simple reason that a successful trade is in a better position to give a more sympathetic response to the applications of those it employs.

What may we expect from the introduction of such a System as is suggested? First of all, to obtain the necessary data on which to scientifically manage our respective businesses, with a view to making each order, each department, and the business as a whole, produce a profit.

To enable the management to select such classes of work as the particular business finds it can profitably produce, and to reject such work as a Costing System shows it cannot, for one reason or another, produce at existing low market rates; in short, to prevent orders being booked at a loss.

To prevent continued losses, arising from under-estimating, for if the System does not prevent errors of judgment (*i.e.*, estimating of time), it does at least show them as they occur, and thus prevents their repetition.

And the gradual extermination of the present suicidal tendency to scramble for orders at any price, and so secure ourselves against ridiculous prices. To-day we are much too prone to accept orders at prices we

Digitized by Google

are told some other firm will do the work at—an altogether unbusinesslike action. Reliable costs would give us more reliance in ourselves, and so we should be less swayed by the figures of others.

Our keenness to obtain orders should not be allowed to over-ride our judgment of the fair value of the work. The anxiety to obtain an order should be in proportion to the profit it is likely to produce.

The increase of our profits is the one thing we should work for, instead of too frequently considering the turn-over as more important. All businesses are valuable in proportion to the profit they earn, irrespective of the amount of work they do. Better management means profits.

It by no means follows that a business doing a large turn-over and involving a large and continuous capital expenditure for plant and buildings will make more profit than a smaller one. We must look elsewhere for the profit-producing factor.

The Costing Committee do not suggest that you should do something they themselves have not found satisfactory. They are offering you advice based on the results of their own systems. The suggested scheme may therefore be taken as the best general one that can be produced, although it may require some modifications to suit varying businesses. If it is open to improvement, the discussion we are about to enter upon will show in what particulars it can be improved.

The Committee confidently believe that good results may be anticipated by those who put the scheme into operation. This course will take some thought and expenditure, which will be nothing in comparison with the beneficial results that may be expected.

There are members of the trade, our fellow-craftsmen, who could tell you, and will tell you I hope to-day, that by the introduction of a system they have actually increased their profits, although their turn-over has gone down in amount. What individual members can achieve is absolutely nothing compared with what the trade can do if it will only act in a united and systematic manner on this question of costing. United action in this matter would undoubtedly draw us together in other ways, and such a result in itself would be invaluable to us all.

May I suggest that we forget the days when it was admitted, and actually accepted by some, that the composing-room could not be expected to pay? When work was taken to "fill up" irrespective of price, and when it was a practice with some to offer to take work at so much per cent. less than another house's price, leaving the customer to fix such price. If we cannot give up these old and expensive habits we must not expect any good results from our present attempt to put our trade on a better basis.

I hope you do not anticipate that we shall arrive at a final conclusion by attending one Cost Congress, but we expect to arrive at useful decisions. We may not end all our troubles now, but we may—and will, if you so determine—very much improve matters relating to our trade; but this is for you to determine. (Applause.)

The System Recommended.

Mr. W. HOWARD HAZELL next very lucidly explained the details of the Costing Committee's recommendations, and the system formulated for general adoption, illustrating the working of the System with the aid of a number of large diagrams hung at the back of the platform. The following is a summary of his admirable speech:—

The Committee had considered the American and Westminster Systems, and various Cost Systems in use in this country, and had taken the best features of all, and produced a System that was adaptable to a business of two or twenty departments, ten or one thousand employees.

In the printing business it is difficult to arrive at the cost of each process, as the general expenses are very heavy, and are steadily increasing, and vary considerably in the different processes.

The basis of estimating and charging for printing should be the "hour" of employees actually working on jobs, and their time should be charged at an hourly rate which would cover their wages and the wages of miscellaneous workers (whose time cannot be recorded on jobs), and the value of machinery used in each process, and a percentage to cover all the general expenses of the business.

In order to find out what is the hourly rate for each process, and the cost of each job, the system recommended is as follows:—

That each printing business should be divided into departments, each department as far as possible only including one manufacturing process. The expenses of the previous year, or the average of previous years, as shown by the Profit and Loss Account, should be divided into—

1. Wages.
2. Materials.
3. All other general expenses.

The first step is to allocate all the general expenses as far as possible to the different departments according to where the expenses are incurred. For example—rent, rates, taxes, and heating should be divided according to the floor space in each department; depreciation and insurance according to the value of the plant, etc. By this means a large proportion of the general expenses will be allocated to the departments, and the weekly cost of these expenses must be found.

The remaining general expenses, such as office salaries, bad debts, discounts, etc., cannot be allocated exactly to each department, as they are an overhead expense on the whole business, and are recovered by adding a percentage to the value of materials supplied and the cost of each department (*i.e.*, wages paid, plus general expenses).

A weekly statement should be prepared which shows the wages paid, the general expenses which are allocated to the department, and the percentage added to cover overhead expenses. This shows the total cost of the department for the week.

Each worker whose time can be recorded against the jobs on which he is working, should make out a docket, and the total number of hours worked on each process, multiplied by its own hourly rate, will give the value of work produced in each department.

If the hourly rates are correct, the value of work produced will, over a number of weeks, approximately balance with the cost of the department, and if they are incorrect, the difference will show by what amounts the hourly rates must be increased. At the same time the hours worked on each job, multiplied by the correct hourly rates, give the exact cost of producing each job.

The Committee strongly recommends that the basis of costing in the composing department should be the "compositor hour," which should be the time a compositor takes in composing, imposing, and correcting jobs, and that the time on distribution, reading, proof pulling, etc., should be covered by the hourly rate at which the compositor's time is reckoned.

The machine hourly rate—which varies with the size and class of each machine—should be such as to cover all the costs of the machine department, including idle time. The actual value of ink used on each job should be added separately, and not included in the hourly rate, as the value of ink varies considerably.

Mr. W. Howard Hazell further pointed out the advantages of the system, as it did not interfere with the ledgers, day books, and other books of account, and that it would be possible to start the system with one department only, and gradually to extend it. Estimates should be worked out on the same hourly basis as that on which the costs were found, so that the accuracy of the estimates could be checked.

It is essential that the system, when once inaugurated, should be maintained, as costs were increasing rapidly. If a printer had found his hourly costs a year or two ago, those costs were incorrect now, owing to the Insurance Act, shorter working hours, and increased cost of coal and other materials. He urged the printers to adopt the system, as he was convinced that it would lead to less reckless cutting of prices, greater uniformity in prices, and consequently improved profits for all printers.

The CHAIRMAN invited questions on Mr. Hazell's remarks and these flowed in in quick succession from all parts of the Hall, and were as promptly answered, with a fluency and conciseness that delighted the large gathering. Among them a Norwich printer asked for more light on the 10 per cent. on material, which he thought was hardly sufficient, and Mr. Hazell, in reply, said the Costing Committee believed themselves that 15 to 20 per cent. was nearer the mark as the percentage on materials. But they thought if they recommended that, some sceptics would be saying the Committee did not know what they were talking about. They therefore recommended 10 per cent. as a minimum, but urged the printer to work out for himself what the costs of materials really were. Each printer should go through the expenses in the overhead expenses column and carefully analyse them and transfer travellers' commission, bad debts, and all other expenses that really could be transferred as a material cost, and then he would probably find that the percentage was a good deal more than 10 per cent.

In answer to a Manchester printer Mr. HAZELL said that if they did not write to expense of business 5 per cent. on capital they must then add on to the cost dockets a greater amount of net profit. The Committee thought it better that printers should consider 5 per cent. as an expense on business because much of the capital they employed cost them 5 per cent.

To another questioner Mr. HAZELL said he thought 10 per cent. on the original value would be a great deal too much. On an average the Committee thought 10 per cent. on the diminishing value would be approximately correct.

As to the amount of clerical assistance necessary, Mr. Hazell said they first wanted a skilled investigation to arrive at the allocation of general expenses, etc., but afterwards it was mere routine work. He did not like to give definite figures, because the number of clerks would depend on the size and character of one's business.

Other inquiries elicited the explanation that the Committee recommended that rent, rates and taxes and similar expenses should be allocated for overhead expenses on the square foot and not on the floor space. Overhead expenses were allocated on the total of wages paid in the department and placed to departmental expenses. That approximately was labour output and that was directed and controlled by the overhead and office expenses, and therefore the overhead expenses should be in proportion to the labour output or departmental expenses.

With regard to idle time, the chargeable hours were divided into the costs, which gave the hourly rate of the chargeable time. If there had been any idle time, the chargeable time would go up. The idea of the System was to find out that hourly cost in each printer's works which would cover distribution, idle time, breakdowns on machine and so on.

Many other questions were put and answered, and the Chairman had to call a halt as time would not permit of longer discussion.

The Working of the System.

Mr. ARTHUR C. ROBERTS (expert and general adviser to the Costing Committee, and ac-

countant to the Federation) next addressed the Congress, giving an exposition of the practical working of the System, etc., in connection with the dockets and cost of production and other forms. Explaining how to collect the chargeable hours, he said the first was to settle what was chargeable and what was not chargeable. The non-chargeable hour as a rule was waiting time, and in the composing department distribution was the non-chargeable time. He did not think he had met a compositor who wrote "waiting time"; it was generally "dissing." (Laughter.) Every possible hour should be made chargeable. They must divide a business up into compartments whatever business it was. The Committee had decided to recommend dockets for three compartments: composing-room, machine room, and warehouse or bindery. They had decided to give printers an easy system which would not bother them, and with as few forms as possible at first, so as to avoid any confusion in the minds of those printers who had never thought out a cost system at all. They were posing as business doctors, and gave their medicine in small doses at first. Under this system they could take one department at a time if they wished To get the chargeable hour every workman who did any work that could possibly be charged to the job must write a daily docket. A daily docket was recommended as preferable to a weekly docket, as it was much easier to control. In concluding his remarks, Mr. Roberts said that whatever cost system they decided to adopt, he hoped they would see it through. If they had no time to put one in themselves, it was very easy to get someone to do it for them. He impressed on printers the vital importance of a cost system not only to themselves but to the trade as a whole.

Mr. W. B. BLAIKIE (President of the Scottish Alliance) spoke of the necessity of each printer adopting this System, and appealed for a strong union. He referred in a few words to the recent printing dispute in Edinburgh and Glasgow, as providing an object lesson on the value of a strong union. A strong union based on justice had helped them to get over the difficulties they had had with their workpeople in Edinburgh and Glasgow, and had helped them to come out of this dispute successfully. They were able to convince their workmen that their cause was just. The reason was perfectly simple. They had found in the last two years that it was necessary to make Scotland a sort of unit on its own, and to work it locally. Realising the necessity of mutual interests being agreed upon, Edinburgh and Glasgow joined hands for the first time in the history of the trade. After they had decided to post the lock-out notices they were visited by the heads of the men's federation, and through their interference they were able to stop the lamentable lock-out. The strenuous conferences they had held had made that possible, and his personal experience of those conferences was that he did not wish to meet more capable and more straightforward men than those who came from the men's federation to discuss the matter with them. He hoped henceforward they would be able to trust each other. The introduction of this costing system they hoped would prevent that abominable system of self-sweating that printers had adopted in the past, and which was principally caused by three things—ignorance, timidity (or cowardice, if they liked), and mistrust. They did not trust each other as they ought to do; if they met oftener it would do a great deal to prevent that feeling of mistrust. Any system must first of all be built on justice to the customer, and secondly, on knowledge of the state of their own affairs They had made a very good start that morning, and he hoped it would be the beginning of a period of mutual trust and justice to themselves.

Questions were then taken on Mr. Roberts' address, some being answered by Mr. Roberts and some by Mr. Howard Hazell. The latter answering an inquiry as to how to get the machine hours when a man was working on more than one machine, said the man would make out a docket to account for his time, and if he had various machines under his control he would show each machine working so many hours. Then he would have a rate for each machine and would charge it up. It would not be the rate per hour, but the hours each machine was running. The question of having a separate docket for each machine was a matter for the printer to settle for himself.

Replying to other inquiries he said the Committee came to the decision that the average printer was such a sceptical creature that it was no good giving him the actual costs of the hourly rates. The point they had each to consider was what was going on in their works, what was cost, and what was wrong. The advantage of the System was that it pointed out any defects in management; if they found that the hourly cost of composition was working out higher than it should be for the district, they knew there was something wrong in the business and they would stop it.

The Machine Unit.

Mr. HARRY COOKE, with the aid of numerous specially prepared tables, gave an admirable address on the method adopted by the Costing Committee for finding the machine unit. They had first to reckon the labour on machines, and secondly, as machines varied in size a different rate had to be established for different classes of machines, so that each class would only bear its fair proportion of cost. The machine-room cost must be divided into two separate groups: first, all expenses of the department other than the actual wages paid for running the machine; and the second group consisted of the wages paid for running the machine, namely, the wages of the minder and the feeder. The number of the machine units was multiplied by the average hours. Dividing the costs by the total hour units of the departments for the week gave them 2·55d. as the unit rate.

To the inquiry as to whether there was any discrimination between making-ready and running time, Mr. Cooke said he thought it would work out on the average better to have a fixed rate for the combined time, a statement that met with decided expressions of approval.

Replying to another enquirer as to the advantages of the unit system in the matter of accuracy, Mr. Cooke said it had been considered, taking all things into consideration, as the soundest way of getting at what a machine really cost. The system was reasonably accurate, and at the same time it had the advantage of being easily understood; there was certainly a real simplicity about it which no other system which the Committee had studied gave them.

Another point was that if a job on a quad demy machine was put on to a double demy machine, owing to a rush of work, the machine was costing the printer no more, but the working of the job was, and he must charge it at what it cost him and not what he would like it to cost him.

A speaker having expressed the hope that Mr. Hazell would have touched on the final margin which represented profit, Mr. Hazell said the Committee did consider making a recommendation. The American system recommended 25 per cent. added as net profit. He only wished they could recommend that. Possibly if they all put in this System they might be able to. The percentage that must be added for net profit would be added over the total cost of material and all labour, and what that profit was would depend on the connection of each printer and his salesmanship.

At this stage the Congress adjourned till the next day, an enjoyable programme of music being performed in the evening at a Conversazione, given by the London Master Printers' Association, in the Connaught Rooms, Great Queen-street, W.C., which was largely attended.

SECOND DAY.

The Congress resumed at 10.30 on Wednesday, 19th inst., with Mr. HOWARD HAZELL answering a few more questions he had received in writing since the previous day.

The first had reference to a difficulty as to chargeable and non-chargeable hours, and the explanation was that in the composing-room the definition of chargeable time was the time taken by compositors in composing, imposing, and making corrections, whether house or author's corrections, and sending the job to machine. That was chargeable time. Non-chargeable time was the time of readers, overseers, readers' boys, proof-puller, storekeeper, and all those miscellaneous workers who did not or who could not easily account for the whole of the day for the jobs on which they were employed. The question was raised the previous day as to whether picking should be considered chargeable or non-chargeable. The point had never been raised previously, but, after giving it fair consideration, Mr. Hazell thought a moderate amount of picking could not be considered as non-chargeable time. Even in the best managed business there would probably be some picking, and as a reasonable amount of picking could not be avoided a charge should be made against the job.

How is the printer to deal with the handling charge on material supplied by customers, such as paper, was another query. This was a point printers too often overlooked, said Mr. Hazell, and the best way of dealing with it was to go through the expenses in the materials column. If the printer was handling customer's paper, he had to pay rent for it, and he had to pay for lighting and heating of the room. There was no depreciation, because it was not his paper, and probably he would not be responsible for insurance. There would be no interest, because he was not buying and supplying the paper, but there would be the wages of the warehouseman. He should find approximately the number of reams of paper he handles in the year, and find out how much the rent, rates and taxes and those special expenses of warehousing the paper amounted to per ream. That was the expense he incurred in handling his customer's paper, and when he estimated for a job he should remember the handling of paper was not included in the compositors' rate nor in the machine-room rate, and as he could not add a percentage in charging for material he should put down a charge per ream to cover the cost of handling that material.

Someone asked if 10 per cent. depreciation on type was sufficient, and Mr. Hazell said it was not. The Committee recommended that 10 per cent. depreciation all round would probably meet the case. But if the printer wanted to be accurate he must put in the average in each department. If all printers would write the proper depreciation, he added, we should be getting nearer to accurate costing.

America's Example.

Mr. R. A. AUSTEN LEIGH addressed the Congress on the advantages of a costing system as exemplified in America. He began by referring to a few of the difficulties they had in America in persuading some people to install a cost system. He enumerated a few of the various classes of people that were met with, punctuating his remarks with amusing anecdotes. The cost of installing a system, he said, was only another way of taking out an insurance policy, as it insured them against taking unremunerative jobs. But to arrive at your costs was not everything. Having got your costs, if you have not got an efficient organisation you can go on losing money just as readily as before. There was an economic law which said that large profits can be permanently secured only by efficient organisation. In the machine-room the Americans made one great discovery: the enormous over-equipment in the way of machinery. They all knew how easily it arose. Their competitor put in a new and expensive machine, and they thought they were bound to put it in two, and they did not always wait to think if they were going to have the work to fill it. Perhaps they had a great rush of work for a month, and their foreman told them he could not get the work out, that they were working excessive overtime, and he wanted the employer to put in two more machines. They allowed themselves to be persuaded that the rush was going to continue, and they ordered two new machines. The rush passed by, and they found there was not enough work for them. The printer then tried to get more work by cutting prices, and his last state was worse than the first. If they wanted to control their works they must be careful how they added machinery; be sure they had the work first. They should have enough machines to meet their average demand, and when they could not meet the rush one month, let them look round and see if their neighbour could not lend them a machine for that month. If they found out that they had too much machinery, through a Cost System, let them see if they could not scrap their old machines. If they sold them they were only enabling someone to compete with them at a lower price. The Americans found the cost system showed the number of impressions got out of the machines for every running hour. It came as a shock, because they found it was very much lower than what they were told the machine could produce.

Among other advantages the Americans found the cost system gave them, Mr. Leigh said that in the first place it gave every printer who installed it a better and proper grip of his business. Among the details it revealed to the printer, Mr. Leigh mentioned customer's stock in the warehouse not charged for, capital locked up in standing type for which the customer was charged nothing, that overtime was the reverse of an economy, that the standing charges were at least 6d. per chargeable hour. A properly equipped cost system should give the printer an inventory of his machinery, which was a great gain, supposing he had the misfortune to be burnt out. It would also give him a proper check on his materials, and it made it an easy and simple thing to make out a monthly profit and loss account.

On the question whether the result was going to diminish the printer's turnover, the speaker said a printer should expect a profit on every job that goes through. Probably at first his turnover would diminish if he lived up to this rule. But he gave a word of caution. Supposing he had been doing a lot of work and found out for the first time that he had been taking it a regular loss, he would not say, at once turn out that work because it did not pay. That was a dangerous proceeding. What he could do, when he saw what jobs paid and what did not, was to dis-

Digitized by Google

cover some economy by which he could reduce the expenses on non-profitable work. If that was not possible, there was still the step of going to the customer who, if it was regular work, he supposed would be a friend, and possibly he would get him occasionally to pay an enhanced price for it, especially if he showed the customer that the cost had been arrived at on a perfectly fair basis. As to new work, he thought those who put in a cost system would register a resolve not to take any work in future except that which would show a profit. If they were going to get any improvement at all, they had got to make that resolve sooner or later, and therefore he said make it at once. With regard to their attitude towards the fill-up job, he advised printers to avoid like the devil taking jobs at less than cost because it was a slack period of the year.

The result of the cost system in America had been to revolutionise the whole outlook of the trade. A few years ago it was just as bad there as it is here to-day; it was despised by the whole community and especially by the banker. Three-and-a-half years ago the first cost congress took place in America. A permanent committee was set up to draw up forms and carry on the movement. They had held a cost congress each year since all over the country, so that hardly a month passed without a cost congress being held in some State or other. An entirely new spirit had come into the trade in America, mainly brought about through the adoption of a cost system and also by the co-operation which it led to. The American managers and foremen benefitted by the greater ease with which they carried on their duties, and the employees stood to benefit just as much as the master and manager.

Concluding, Mr. Leigh said he was sure they all wanted to see the standard of comfort increased, and they would be glad to add to the wages of their workmen were there a little extra margin left for extra pay. It would be an unsatisfactory feature of the Federation's System if they thought that the men could not benefit through it as much as the masters. Therefore, they must get them to help as much as they could in the movement. They could hinder it to a slight extent in not filling up the dockets, but someone else would then be go to do that, because it had got to be done somehow or other. They had been able to study the American cost system and take the best points of it. He was sorry the Americans had got the start of us in the movement, but they must see if they could not overtake them. (Applause.)

Some Testimonies to the System.

Mr. BISSETT (secretary to the Scottish Alliance) addressed the Congress on the practical value of a uniform costing system. As a professional accountant, he gave his experience of the definite value a costing system had been in another trade, and then spoke of the benefits of a uniform system. He described what they had been doing in Scotland to get the cost idea pushed forward, and added that they had arranged to hold a Scottish Cost Congress in about a month's time. He knew of no trade in which the same amount of brains and capital and energy was expended with so little result.

Mr. MUIR (Belfast) said they had at this Congress the means of organizing practically every district in England, Scotland and Ireland, and when he went back to the north of Ireland he proposed to have lantern slides made of all the Forms exhibited in the Hall. Before he left Ireland it was suggested that he should give an address to the printers of Belfast and district on what he had heard at the Congress. He suggested that that plan might be adopted in other centres.

Mr. CECIL B. JOHNSON (York) addressed the Congress on "What the introduction of a cost system has done for me." He said he had been running the System for the past three years. It was introduced as the result of his brother's visit to America, where he was shown costing systems in operation in various offices, the majority of which, he noticed, were running identically the same systems. He himself was opposed to its adoption in his business at first, but was pursuaded to go into the matter, the result of which was that they developed the System to cover every department they had. The foreman was distinctly opposed to what they were doing, but it was explained that he had better not condemn the System until it had had a fair trial, and their people all accepted that view. After six months it had proved to them that certain of their rates were too low, while others were approximately correct. They were losing money on some classes of work they had thought they were making money on, and other classes of work were carrying that loss. A little consideration convinced them that other printers were in the same happy state, and they decided not to accept any work not covered by their new rates, and to endeavour to relieve other printers of work they knew they must be making a profit on without quite knowing it. Now the men liked the System, because they realised that it was absolutely fair, and they had not made any attempt to play off one man against another. The foreman liked it, because it saved him trouble, and the output per hour for each machine helped him enormously in estimating. The management liked it because the materials were dealt with satisfactorily, and the time taken could no longer be guessed. Travellers liked it because they had confidence their prices were correct, and if others were 20 per cent. below them they knew the work was not worth having. The directors liked it because the profits were larger and the anxiety was less. Whilst the fact that their turnover had increased steadily since the System was put in proved that their customers liked it.

Mr. WILLIAM ASHTON (Southport) spoke on "A Co-operative Costing System in Practical Working." By way of encouragement to printers as to what could be done, and had been done in one small town to enable them to apply the knowledge which had been so lucidly explained to them the previous day and that day, Mr. Ashton recounted his experience of introducing and running a system in a printing and binding business, the results of which had been distinctly beneficial, having enabled them to eliminate all work being done at less than cost. He did not think there was a machine running now in Southport at any time of the year that was not working at a profit, and no more work was sent out of the town than was previously. It had had indirect benefits in bringing members of the trade together, and they were very real.

Mr. L. POLLARD (Exeter) gave a short account of their experiences of the costing system in Exeter, which they adopted two years ago, and these were almost identical with Mr. Johnson's in York. The System looked more formidable than it really was.

Mr. RUSHTON suggested some little rearrangement of Form 1, after which

Mr. FRANK BIRD (Manchester) read a paper on "Accuracy and System in a Printing Office," which he said really endorsed the statements so ably put forward by Mr. Howard Hazell.

After an adjournment for lunch the Congress was resumed in the afternoon, when

Mr. PAUL WALMSLEY (manager, Messrs. Vacher and Co., London) addressed the Congress on "Cost Finding from a Manager's Point of View." He remarked that the Federation's System was not a new system; a sytem had been in use in this country a good many years, though of course confined to a very few offices. A close examination of it and comparison with the American system showed that it was on a much simpler basis. He recommended it as a thoroughly practical system. It had been established and was in successful working in a good many printing offices in London and in the country. Mr. Walmsley then dealt in detail with the hourly costing rates, and emphasised the point that its accuracy largely depended on arriving at the correct non-productive percentage, or unit, in connection with the productive hours.

The CHAIRMAN here intimated that he could not ask for any more papers, in order to enable them to end the Congress by five o'clock. After Mr. Hazell had answered several more questions, and other questions had been replied to by Mr. Austen Leigh and Mr. Walmsley,

Mr. EDWARD UNWIN (London) addressed the Congress. He suggested the desirability of seeking to put the utmost cost on to the cost docket, and also rubbed in the point about adding 5 per cent. on capital. Referring to book work he remarked that corrections were a big item, and that they were often asked what was the price per hour for corrections. He prayed them to consider that while it might be perfectly right for them to have the unit hour in their charges, when they made a charge for corrections or alterations they should always charge *ad valorem* and resist giving a price per hour.

Mr. WILLIAM BELLOWS made a few remarks, in sympathy with a former speaker in the Hall, from the standpoint of the small printer. He hoped the printing profession would be saved by consolidation, but that would not be unless they were willing to meet their friends in the smaller businesses. He hoped some simplification of the costing system would be adopted to suit the purpose of the smaller printer employing perhaps five or six or eight men.

Mr. G. S. COOPER (London) illustrated the need there was for system in the printing office with some interesting experiences, forcibly denouncing the pernicious custom of accepting work at bare cost to put on idle presses. He deplored the lack of backbone some printers suffered from.

Mr. J. R. RIDDELL (principal, St. Bride Institute Printing School), spoke of his practical experience in regard to costing, observing that a costing system would show any leakage as the result of faulty management, such as picking, the amount of which that goes on in printing offices he believed employers did not fully realise. He asserted the importance of educating the employees in the costing system, and the need of giving them some explanations of its aims and objects before they could expect to get the results they required, and trusted the enthusiasm of the meeting would not evaporate when they left the Hall.

Mr. REYNOLDS (George Reynolds and Son, Stepney) paid a tribute to the services of Mr. Roberts, who, he said, originated the Forms and introduced this System to the Federation. He was dubious about the benefits of a cost system unless they got uniform prices, as no matter what economies they effected or how efficient they made their printing offices in London, the costs would be more than they were in country printing offices, and after putting a reasonable profit on to their costs in London they would find the work going into the country. They wanted a uniform scale of printing prices for the public throughout the country.

Among several more questions answered at this stage was an inquiry whether the Committee recommended that the departmental cost of composing room alterations should be charged separately and at a less price than the cost of composition. Mr. HAZELL said it was an interesting point. From an accountant's point of view it was not correct, because the hourly rate covered the cost of composition plus the cost of distribution, about 25 per cent. But when a man was correcting there was no distribution in consequence of those corrections, and so the cost of corrections should be charged at a lower rate.

The Chairman's Summary.

The CHAIRMAN said he had received a letter written in connection with the City and Guilds of London Institute, expressing a desire to work more closely with the Federation in this matter. It admitted that some of their instructors were "extremely weak," and gave an assurance that a committee would go into the matter to the end that the instruction given to the coming generation should be more in accord with what they advocated. The Chairman then expressed the Congress' thorough appreciation of the excellent explanatory papers that had been read, and said personally he felt that with the papers and the pertinent questions that had been put they had gone very much further and deeper into details that they could have hoped, and he trusted that the matter was going to be taken up very vigorously at each of the centres. Provided the necessary funds were forthcoming, the London Council were going to arrange for experts to lecture at the large and important centres throughout the country.

With reference to what had occurred at the Congress he asked them to remember these few points. That the unit, whether it be a time or office unit, must be the whole cost; that is, it must include the whole of the expenses of the department, and in fact everything but profit. It must be inclusive. He wanted them to make a very careful distinction between the chargeable and non-chargeable hours. They were the vital points of the System. To do this they must start at once with daily dockets to get details. He was afraid in the past too many of them had assumed that the total hours worked were somehow or other charged. With reference to the 10 per cent. minimum on materials, that had been pretty well thrashed out, but the question was raised as to whether it was enough. He would remind them again that it was suggested as the minimum. It did not include profit and should be added to the papers they handled although they belonged to other people. Again, a depreciation of 10 per cent. on the diminishing value had been proved conclusively to be fair and reasonable. A question had been raised as to whether the Inland Revenue authorities would agree to that. In some centres they did and in others they did not. Then the machine unit was a most interesting matter, and one that they would all require to work out most carefully for themselves. As to the distinction between cost finding and estimating, the Chairman pointed out that cost finding was the finding of the cost per hour or the piece unit, while estimating was the finding of what amount or figure of the hours they thought or knew a certain job was going to take. Here they might have very large differences of opinion, but a costing system if properly worked would show what a similar job cost before, and therefore in an estimate of it guessing should be done away with. If they saw they were wrong in their figures and were certain they were right in their rates they would know the error was one of time, and that could be easily remedied. They must not forget the uniformity of this System. They wanted the costing systems to be as uniform as possible, and they wanted as

many houses in the country to adopt them as they could possibly induce to do so. He was pleased to tell the Congress that the Committee would endeavour to prepare a simpler scheme for the smaller houses. That would be prepared as soon as they could manage it, and it would be published for the use of all concerned. Their Secretary, Mr. Lake, had undertaken to have lantern slides made of the various Forms, and they would likewise be at their disposal. The Chairman concluded with an earnest and eloquent appeal to each member of the Congress to take the matter up locally, form local committees and go into the question thoroughly, adopt an hour rate for each operation for the district and adhere to the rates which should be agreed upon.

The Resolutions.

Mr. W. A. WATERLOW then moved the following resolution :—

That the Cost System discussed by this Congress, with any necessary amendments, be approved and strongly recommended for universal adoption by the trade.

He remarked that the Committee had come before the Congress with a cut-and-dried scheme, which they felt was the best way to deal with the matter. It was a system which, after consideration, they came to the conclusion was the best to recommend to them, and they had fully discussed all the systems that were brought to their notice during the eighteen months they had been working on this subject. The house he was connected with installed a system on practically identical lines with this five years ago, and it had given the directors and management the very greatest satisfaction; they would not be without it to-day for anything. Until they installed this System they could have no idea of the added interest that it would give them in their business. Mr. Waterlow pointed out the great advantages it gave them in the case of disputes with their customers, and especially when they had to take legal proceedings.

Mr. JAMES FORMAN (Nottingham), in seconding the resolution, said the enthusiasm of the meeting was convincing proof of two things, first, that a large number of printers were satisfied there was something very wrong with the state of printerdom, and, secondly, that a large number of them were determined to find a remedy. He confirmed every word that Mr. Waterlow had used, and said their experience of installing a system had been almost identical with his.

The resolution, on being put to the meeting, was carried unanimously, with loud applause.

Mr. W. A. CLOWES (President, London Association) moved, and Mr. THEO. MAY seconded the following resolution :—

That the Costing Committee be warmly thanked for their labours and requested to immediately promulgate the System, with any necessary modifications and forms, and to organise a campaign of instruction in all important centres by lectures and demonstrations by experts, and that a Permanent Costing Committee be appointed to carry on the work, to consist of not more than twelve members.

Carried unanimously.

Mr. J. E. T. ALLEN (Chairman of the Costing Committee) having responded, Mr. A. F. BLADES moved, "That the expenses of the Committee and of the campaign be defrayed by a fund to be at once raised; each master printer present at the Congress to be asked to contribute." Mr. E. CROFT (Plymouth) seconded, and the resolution was unanimously carried.

Mr. R. H. H. BAIRD (Belfast) then proposed "That a Cost Congress be held annually at a time and place to be arranged." Mr. HERMAN LEA seconded, and the motion was carried unanimously.

A vote of thanks to the speakers was carried with applause, on the motion of Mr. GEO. H. HARRISON (President of Leeds Association), seconded by Mr. J. THOMLINSON (Glasgow).

Mr. HOWARD HAZELL, who received an ovation on rising, responded for the other speakers and himself.

A hearty vote of thanks to the Chairman, on the motion of Mr. SIDDALL (Sheffield), seconded by Mr. HOBBS (Bristol), and the Chairman's response, brought the proceedings to a close about 5 p.m.

IN January printed books were exported of the value of £208,898, compared with £199,386 in January, 1912, and £177,999 for the corresponding month of the previous year.

HARD ON THE REPORTERS.—In a case at Oldham, the other day, in which a youth was summoned for having discharged a gun without a licence. The chief constable said :—"Can I try it (the gun) on one of the reporters? There are times when I should like to do so." A magistrate: "Would it not be better to go to the other end of the court if you are going to shoot at the reporters?" The chief constable: "No, I should like to be a little nearer." The owner of the gun was told it would be confiscated, and he would be fined 10s. and costs.

The Condition of the Labour Market

IN THE

PRINTING AND ALLIED TRADES.

HOME.

According to the Labour correspondents of the Board of Trade, whose reports appear in the *Labour Gazette* for the current month, employment was fair on the whole during January in the printing trades, though not so good as a month ago. (See Table.) At the end of the month it improved. It was better than a year ago.

Districts.	No. of Members of Unions at end of January, 1913.	Percentage Unemployed at end of			Increase (+) or Decrease (—) on a	
		Jan., 1913.	Dec., 1912.	Jan., 1912.	Month ago.	Year ago.
London	21,402	5·8	7·4	7·5	— 1·6	— 1·7
Northern Counties and Yorkshire ...	5,794	4·3	3·8	4·9	+ 0·5	— 0·6
Lancs. and Cheshire	7,190	4·7	4·6	6·5	+ 0·1	— 1·8
East Midland and Eastern Counties ...	2,713	2·7	1·6	3·6	+ 1·1	— 0·0
West Midlands	2,773	3·2	2·9	5·2	+ 0·3	— 2·0
S. and S. W Counties and Wales ...	4,100	2·8	3·6	3·0	— 0·8	— 0·2
Scotland	5,269	4·2	4·4	3·6	— 0·2	+ 0·6
Ireland...	2,566	7·2	5·8	8·3	+ 1·4	— 1·1
United Kingdom	51,807	4·9	5·4	6·0	— 0·5	— 1·1

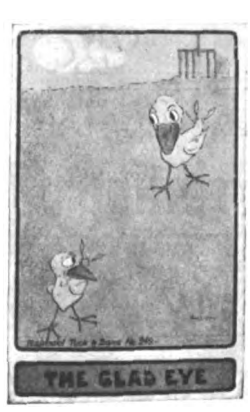
In London, employment with compositors was reported as slack; there was, however, a considerable decrease in the percentage of trade union members unemployed at the end of the month, as compared with the end of December. In other branches employment was fair, and showed little change compared with a month ago. As compared with a year ago, a general improvement was reported.

In other centres, employment showed a general decline as compared with a month ago. With letterpress printers it was fair, and better than a year ago, while with lithographic printers it was only moderate, and worse than a year ago. At Leeds employment was slack.

FOREIGN.

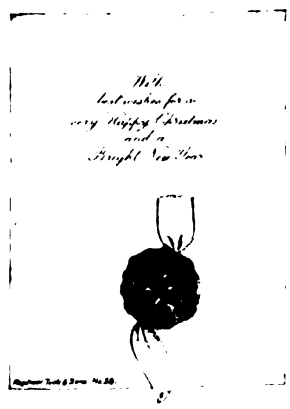
From France it was reported that employment in the printing trades was good during December, both at Paris and in the Provinces. In Germany, however, it was rather slacker, so that the percentage of unemployed amongst trade unionists rose to 4·7 out of a total of 65,794, as compared with 3·6 in November, and 3·9 in December, 1911. In the Dutch printing trades there was but little change, the percentage of unemployed, out or 6,136 unionists, being 0·5 in December, against 0·6 in November, and 0·8 in December, 1911. In Norway the percentage rose from 0·6 in November to 1·3 in December (out of a total of 2,061), which is above the 1·1 recorded in December, 1911.

A Good Belt Dressing.



One of the sources of waste of power in the factory that is not often taken into consideration is the slipping of belts, especially when there is a heavy load on the machines driven. This it is often attempted to cure by the tightening of the belts, and so the trouble is made worse, for tight belts cause heavy friction, with a corresponding waste of power and time. To eliminate this waste a preparation has been introduced by the "Byta" Manufacturing Co., 24, Bride-lane, Fleet-street, E.C., under the name of "Byta," and it is claimed for it that it gives belts such a grip on the pulleys that they may be run slack, thus eliminating friction, economising power, and lengthening the life of belts, bearings, and pulleys. "Byta" contains no injurious ingredients and renders the belts pliable and easy running. It is used by many of the leading firms, amongst others by:—The Gas Light and Coke Co., Ltd.; the London United Tramways Co., Ltd., London; the London and North Western Railway Co., Crewe; the Great Northern Railway Co., Doncaster; the Edison-Swan Electric Light Co., Ponders End; the Metropolitan Borough of Hammersmith, London; Messrs. Roneo, Ltd., Romford; Messrs. Page and Pratt, Ltd., London; Messrs. W. and G. Baird, Ltd., Belfast; and Messrs. W. Boss and Sons, London.

Those troubled with their belting should communicate with the firm.



MODERN ADVERTISING.—A lecture was delivered recently by Mr. Edmund Street, at the Society of Arts Rooms, John-street, Adelphi, W.C., on the subject of "Modern Advertising." The lecturer referred to the progress made in the adaptation of art to commerce, and pointed out that each step of progress made in art had its corresponding stride forward in commerce. One had only to compare the artistic display of advertisements in the newspapers of to-day with the sameness in the newspapers of the past to realise the help that art had been to commerce. Consumers still clung to the error that they paid for advertisements in the price of the article, but the truth was that the increased demand for the article advertised enabled the manufacturer to produce it at a much lower cost. Many manufacturers preferred a larger sum with smaller profits to a smaller sum with larger profits. Advertising had by no means assumed its final shape. New ideas, new improvements were daily forthcoming, and would continue to do so as long as there were active minds at work, resulting in forceful advertising. No section of social life could progress without advertising.

Tuck's Auto Stationery.

In our issue of January 30th we noticed the Christmas Auto Stationery that has been prepared already for the coming season by Messrs. Raphael Tuck and Sons, Ltd., and

herewith give our readers a few illustrations of designs that are included in the selection, which is one that beats all previous records in this direction.

THE Bookbinders' Pension and Asylum SOCIETY.

Saturday was a red-letter day in the history of this Society, one of the oldest trade institutions. The proceedings lasted from 4 to 11 p.m. The Printing and Allied Trades Charity Sports Association Committee, who were responsible for the event, undertook, through the services of Mr. Kennedy Jones, the President of the Swimming Section, to raise £500 to create a Kennedy Jones Charity Sports Association Pension, and to name one of the cottages in the President's honour. It was in the fulfilment of this that the gatherings took place.

Mr. Kennedy Jones was met at the gates of the pretty almshouses in Balls Pond-road, by Mr. W. T. Rawlinson, the secretary, Mr. Frank E. Bailey, treasurer; the members of the Bookbinders' Pension Committee, and the officials of the Charity Sports Association, and an inspection was made of the grounds and cottages. The interior of the cottages revealed a scene of homeliness, with comfort and content as its dominating factors.

The party gathered in front of the centre cottage at the end of the lawn, when Mr. H. F. Parker, the general hon. secretary

The Almshouses, Balls Pond-Road, where the Home is to be Endowed

of the Charity Sports, in an address, said they were there to ask the President of the Swimming Section of the Charity Sports Association to unveil the tablet of the Kennedy Jones Cottage in recognition of his kindness in raising £500 for the Bookbinders' Pension Society during his year of office. Their President had not only succeeded in doing this, but he had gone a step further and gathered £200 for the Lloyd Memorial (Caxton) Seaside Home at Deal, which was now doing such a good work for the employees of all sections of the allied trades. It was a compliment, because he (Mr. H. F. Parker) happened to be the secretary of this popular Home, and as such he sincerely thanked Mr. Kennedy Jones. In conclusion, he thanked their President for his services to the cause of charity, and in the name of the Printing and Allied Trades Charity Sports Committee asked him to unveil the tablet to commemorate the occasion.

Mr. Kennedy Jones, in reply, expressed how pleased he was with all that he had seen, and said he felt that his humble services had been well employed in aiding such a grand work. He felt that, after all, some of the praise was due to Mr. Parker, through whose energies he had become interested in the Bookbinders' Pension and Asylum Society. He was glad to see the inmates looking so well and contented—that was a sign that this Institution was controlled wisely and efficiently. He was pleased, therefore, now that he had seen them all, to become better acquainted with them and their work, and trusted to again have the pleasure of visiting these pretty cottages. He thanked all for their presence, and concluded by unveiling the tablet and expressing the hope that many more such tablets would be placed over the other cottages in imitation of the fashion which he had the pleasure of now instituting.

Mr. W. T. Rawlinson, the secretary, thanked Mr. Kennedy Jones on behalf of the Bookbinders' Pension Society, and assured him that the good work which he had been instrumental in doing could not be measured by the value of the money they received. Gratitude in many an aged soul would be felt whenever they paused beneath the tablet of the Kennedy Jones Cottage to read of the kindness of their benefactor. He could assure Mr. Kennedy Jones that his name would not only live in the annals of the Bookbinders' Pension Society, but would for many years to come be gratefully remembered by the recipients of his munificence. In the name of his Society he thanked the Charity Sports Association and their esteemed President for creating this red-letter day in the history of this poor, but none the less deserving, trade charitable institution.

Mr. Frank E. Bailey (the treasurer of the Pension Society), thanked Mr. Kennedy Jones in the name of the residents of the Homes for his presence. He had brought a ray of sunshine, he said, into their dull surroundings, and aroused a sense of gratitude within their hearts that would find an echo in many a heart outside their gates, amongst those who might one day be forced to accept the gift which he had so generously given them when he handed them the cheque for £500 that afternoon.

The party then dispersed and rallied again at the concert to celebrate the occasion, held at the Manchester Hotel in the evening, everyone feeling that a most delightful and inspiriting afternoon had been spent.

The speeches at the evening function were, like those of the afternoon, characteristically short and to the point.

Mr. J. Knight, the Hon. Treasurer of the Printing and Allied Trades Charity Sports Association, in the name of this Association thanked Mr. Kennedy Jones for the great service which he had rendered both to sport and to charity. He felt sure that the immense amount of good which would result was, in a way, some little recompense for his efforts. At all events he could assure Mr. Jones that both his committee and Binders' Pension Committee were deeply grateful to him for his generosity and for the keen personal interest which he had taken in their work. He would ask him as the president of their Swimming Section, to hand to the treasurer of the Bookbinders' Pension and Asylum Society the enclosed cheque.

Mr. Kennedy Jones said that he must let the company into the secret that the envelope just handed in merely contained a slip of paper with some writing upon it—as a matter of fact the real article had been handed to Mr. Bailey at the close of the proceedings in the afternoon. He might tell them that when he arrived home his esteemed wife wanted to know what had kept him so long. When he told her about the inmates in the Balls Pond-road cottages she became quite interested, so much so in fact, that she handed him a cheque for £150 to give to Mr. Bailey at this evening's function. This was clearly an instance where the staying out late had resulted in a most satisfactory manner. He felt sure that Mrs. Jones would take an interest in their work, and he had much pleasure in handing Mr. Bailey the cheque. He could not sit down without giving them a bit of sound advice, and that was, whatever they did they were not to lose Mr. H. F. Parker. He could assure them that it was only by his untiring

Mr. Kennedy Jones.

efforts that he had ever heard of their institution and of the immense amount of good which was steadily going on in their midst. He concluded by toasting Mr. Parker's health, which was received with musical honours.

Mr. H. F. Parker thanked Mr. Kennedy Jones for the great compliment which he had paid him, but said he was sure there were many others who ought to have shared the honours with him. Mr. Besley (late private secretary to Mr. Jones), Mr. A. G. Wills, the Hon. Secretary of the Swimming Association, Mr. J. Knight, Hon. Treasurer, Mr. W. A. Fricker, Hon. Assistant Secretary, Mr. A. and Mr. J. Codling, Hon. Sports Secretaries, Mr. C. G. Fletcher and his comrades in the Boxing Section, Mr. H. H. Walker and his co-secretary in the Miniature Rifle Section, Mr. Geo. V. Maddams and his co-secretaries in the Football Section, and Messrs. W. A. Lowe, Alfred W. Paul and Walter Herring had each most materially contributed to the success of the Charity Sports Association's work. Mr. Parker felt sure that each one had done his utmost, and he could not allow them to be left out in the share of praise so publicly expressed by Mr. Jones. They were a grand set of fellows, and he was proud to be associated with them. Mr. Parker said that they were all very grateful to Mrs. Kennedy Jones in so handsomely contributing to the funds of the Bookbinders' Pension Society, and it would be their pleasure to add that amount to the list of contributions which Mr. Kennedy Jones had been responsible for collecting. It was a tremendous task to beat such a record as this—being the largest sum ever raised by any similar organisation in this country. It was the duty of sportsmen to endeavour to lower every record that was made. They had a most difficult record to beat, but, nevertheless, they would do their utmost to beat it. He thanked them one and all most sincerely for the kind manner in which they had received the toast.

Mr. Frank E. Bailey, the Treasurer of the Pension Society, tendered to Mr. Kennedy Jones and his good lady their heartfelt thanks for their generosity. In doing so he not only re-echoed every person's opinion in the room, but those of everyone interested in their work. The old people in their almshouses appreciated their kindness, and wished him to thank Mr. Jones in their name. They were also grateful to Mr. Parker and his Committee, for they had by their efforts displayed that true spirit of comradeship that gave a helping hand to the weaker brother. Unfortunately there was no disputing the fact that they were the poorest branch in the allied trades. Such kindness would long be remembered by the members of bookbinding craft.

Mr. W. T. Rawlinson (Secretary of Pension Society), in thanking Mr. and Mrs. Kennedy Jones for their kindness, said it was the proudest moment in the history of their institution. Never before had they had such kindness shown them, and as the kindness came from quarters that might be considered as outside the ranks of the bookbinding fraternity, it was all the more remarkable. Their gratitude was both deep and sincere. He concluded by asking the company to toast the health of Mr. Kennedy Jones, coupled with the health of his esteemed wife. The toast was enthusiastically received with musical honours.

The concert room was packed to its utmost capacity; and a splendid programme was arranged by the popular comedian, Mr. Fred Morris. Miss A. Orrell and Mr. Stephen Moorcroft were particularly good in their duet "Le Misere Scene, from Il Travotore," whilst the only lady singer, Miss Winifred Burden—a promising and dainty soprano—was heard to advantage in her second song, "You, Just You." Mr. Fred Clements is a talented humorist who kept the audience in continuous laughter in his song "Funny Phrases." Mr. J. W. Green's violin solos were much appreciated, as also were the remaining turns, Mr. W. J. Francis, Mr. Tom Foster and Mr. Herbert Pearce.

A Masonic Installation.—The traditions of the Masonic Lodge of United Strength, No. 228 (it is now 115 years old) were ably maintained the other evening, on the occasion of the installation of Bro. W. J. W. Hart, which took place in the Grecian Temple, at the Great Eastern Hotel. Lodge was called for 4 p.m., and under the presidency of the retiring W.M. Bro. R. J. Ranson, the preliminaries were disposed of in due form. The installation and investiture of the officers for the ensuing year followed, both ceremonies being carried out in an excellent manner. The new W.M. (Mr. Hart) then proceeded to give the Brethren some idea of the work they might expect in the coming year by initiating other members into the mysteries and privileges of Ancient Freemasonry. At the close of the Lodge the Brethren adjourned to the Banquetting Room, where an excellent repast was partaken of, followed by the usual toast list, and a good programme of music. Bro. Walter John Wilden Hart was born March 25th, 1873, at Clapham, and was initiated in the Richmond Lodge, at Manchester, in January, 1900. He is P.S. in the Royal Arch, and has served four Stewardships for the Charities. We extend our congratulations to him on having attained to the Chair of so ancient and honourable a Lodge, and hope he will have a very happy year in office. Mr. Hart has been with the firm of Mrs. Coates Bros. and Co., printing ink manufacturers, for the past twenty-five years.

The importation of ink has greatly increased of late years at Smyrna. The annual imports may be estimated at 90,000 francs (£3,600), one-third of this sum representing the city of Smyrna, and the remainder the islands and provinces. The importing countries are Germany, England, and France. The superior qualities are supplied by England and France.

The Cost Congress.

THE First Cost Congress has been a great success, and the Cost System formulated by the Special Committee of the Master Printers' Federation has been approved and recommended for universal adoption by the trade. It embodies all the best features of the American and Westminster Systems and others that have been studied by the Committee, as Mr. Howard Hazell pointed out, and is adaptable to a business of two or twenty departments, and ten or a thousand employees. Furthermore, as the result of suggestions made at the Congress on behalf of the small country printer, a still simpler scheme will also be prepared to meet these cases. The elasticity of the System is one of its most promising features. What is wanted now, as the Chairman was at pains to emphasise, is for as many printing establishments as possible throughout the entire country to adopt and adapt this costing system for their own particular needs, and obtain as much uniformity as possible. A costing campaign is to be organised to instruct British printers in the principles of the Federation's System, and the Cost Congress is to be an annual one. So that the ball has now been given a good and determined start, and printers must keep it rolling to ensure the attainment of that better condition of the craft for which we have been seeking so long, and from which benefits will accrue to all who are engaged in it in whatever capacity.

An Interesting Newspaper.

WHILE so many Labour and Socialist newspapers are aspiring to reach a sound financial footing, it is interesting to hear of a little weekly, published at Huddersfield, that has attained to a life of seven years, and is being run at a profit, with a circulation of about 9,000, the districts covered being the town of Huddersfield, and the Colne and Holme Valleys, and extending even to Manchester, Leeds, and Bradford, where a good number of copies are sold. The paper is called the *Worker Press*, and has quite a large staff, including an editorial committee of three, one of whom writes the leader, another the leaderettes, and the third the special articles. Besides these is a staff of district correspondents. About seventeen hands are employed in the mechanical department, and the commercial and other sections employ another half-dozen. A Labour printing business is also run, and the whole enterprise is successful. Perhaps the reason for this that its policy is not dictated by anybody, it being quite independent of all outside associations.

* * *

The Encyclopædia Britannica.

THE report of a law case on another page of this journal, in which the paper for the Encyclopædia Britannica is the matter of dispute, is a reminder that this useful publication made its first appearance in the year 1768, the first edition being issued in weekly numbers, and the complete work only reaching to three volumes. The men responsible for the enterprise were a printer in Edinburgh, named Colin Macfarquhar, an engraver called Andrew Bell, and another printer, William Smellie. The second edition was also issued in parts, and took from 1777 till 1784 to complete, reaching, however to ten volumes this time, and from then on the success of the enterprise was assured. Since then edition has followed edition, until to-day it has reached to a number of volumes that practically form a small library, treating of every subject under the sun that it is desirable that man should have information upon, and some idea of the magnitude of the work may be formed from the proceedings in the case referred to, where orders for 1,745 *tons* of paper were stated to have been ordered for the issue of the last edition of this monumental work.

The Halfpenny Newspaper.

A WRITER in a trade contemporary having had a tilt at the halfpenny papers and their contents, and ridiculed especially the information given in the home topics pages, the *Belfast Evening Telegraph* took up the cudgels, and in the course of a long article pointed out the great influence possessed by the halfpenny press of the kingdom. The writer says:—"A glance ot the homeward bound trains and trams in the evenings shows that the halfpenny paper reaches all classes. The professional man and the business man have more time for newspaper reading in the evening, and it is to the halfpenny paper they turn, the penny paper having been glanced at earlier in the day when time was more precious. Then there is hardly an halfpenny paper which has not its aristocratic subscribers. One of the oldest and more regular readers of the *Belfast Evening Telegraph* was the late Duke of Abercorn, while this journal finds its way daily into some of the highest families in Ulster, as well to the homes of the very poorest. Its sales are greater than the sales of any other newspaper printed in the country, and four times greater than that of all the Belfast papers combined. It is an indisputable fact that halfpenny papers are read by all classes to an infinitely greater extent than penny journals. Of the substantial character of the readers of the modern halfpenny paper there can be no doubt. . . . The upper ten, the professional classes, the mercantile classes, the artisan classes, and the labouring classes are all readers of the halfpenny paper, which has in most quarters by sheer merit and enterprise lived down the ancient prejudice that the penny paper has a monopoly of prestige.

Digitized by Google

Another proof of the substantial character of the readers of the halfpenny paper is the substantial character of its advertisements. The biggest firms in the country advertise incessantly in the halfpenny paper, and obtain splendid returns thereby from articles which are far beyond the purse of the lower classes." The halfpenny paper certainly is a power in the land, and, quite apart from its politics, is doing a good work in the education of the masses.

THE Derby Printers, Ltd., have just acquired a piece of land in Willow-row from the Corporation, on which to erect new premises. Last year's trade was £2,040, of which £989 was done in the last six months. After providing for interest, depreciation, etc., the amount of disposable profit was £147, from which a dividend of 1s. in the £ was given to labour on wages, and 1s. in the £ to customers. £321 was paid in wages in the half-year, and £423 expended in paper, ink, etc.

A New Paper Calculator.

All who handle paper in quantities have experienced the trouble of calculating quantities and finding out the costs and weights of different sizes in the same substance, and to aid in getting out results a good many tables have been compiled and systems invented, but one that has been submitted to us recently seems to bear the palm for speed and accuracy in getting out results. It is styled the "Flash" Paper Trades Calculator, and is published by Messrs. Gall and Inglis, the well-known printers and publishers, of Edinburgh and London. It is in the form of a long narrow booklet that may be used on the desk or carried in the pocket, and it is so ingeniously designed and constructed that it performs the most intricate calculations instantly. On opening the covers, a series of upright columns of figures are seen, and four of these work on the principle of a slide rule. By adjusting these to the figures denoting weight, size, price, etc., the most difficult problems connected with paper buying may be worked out. The calculations are given for 480 and 516 sheets to a ream, and if a paper, say, 27 by 34, 64 lbs., 516s. is required, and if it is desired to know what substance this would be in a standard size, it is only necessary to put "64" on column C to 27 by 34 on column D, then looking down column A to "demy," we find the substance is demy 26 lbs. 480. or 28 lbs. 516. This is only one example of the use of the calculator, which will give the differences in price, even to quires and sheets, the price per cwt. when compared with ream price, net cost with discount, and, in fact, every calculation necessary for the paper user. The calculator is well got up, and neat and handy, and in its working is simplicity itself. It should be a boon to papermakers, printers, wholesale stationers, cardboard manufacturers, and all connected in any way with the making or using of papers. The firm also publish tables of a similar class for other trades, and a "Universal" Calculator that should be of the utmost value to those in business or in manufacturing operations.

An Example

of the many letters received every week from enthusiastic Linotype users.

Increased Work.

Speed in all Changes.

Standing Matter.

Avoids Overtime.

Anticipates Another Machine.

The Purchase Justified.

I am very pleased to say that since the installation of Linotype Model 4 Triplex Machine, the work has increased to such an extent that, without its many strong advantages, it could not have been undertaken. As it is, with the simplicity and quickness of change of body and measure, not to speak of the advantages of the Automatic Quadder, I have easily overcome the extra pressure. When I take into account that a large amount of the work at present in hand will have to stand for some time, and that this will be free from "pi," and not require any of the men picking various letters therefrom, it adds considerably to the value of the matter set. In fact, I don't know how I have done without the machine so long; but for it I would have been working overtime for weeks, whereas I have had no overtime at all. These facts give me every hope that, with the continuance of the present orders, I may ere long be compelled to consider the advisability of again placing an order with you for a machine similar to this with different body founts.

I should like to add that in every respect your points of recommendation in persuading me to purchase the machine have been fulfilled to the letter, whilst the courtesy and attention all through the transaction and afterwards have been most marked.

This is the experience of thousands of Linotype users. Linotype advantages are available to *every* Printer who permits himself to have them.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Feb. 26th, 1913.

STRINGENCY was felt in the money market last week until Friday, when there was a better supply of credit. On Saturday there was a large turnover of cash in Lombard-street, while credit was still a little more plentiful, and the demand not being so strong rates eased. On Monday supplies were scarce again, and borrowings were resumed at the Bank of England. Though the scarcity continued yesterday, rates were unchanged. Bullion movements this week have resulted to date in a net efflux of £214,000. Stock markets were depressed last week-end, but there was a greater feeling of hopefulness on Monday. They were not very cheerful yesterday, Mexican news having had a disquieting effect. Consols finished with a small improvement, the quotations now being 74 9/16 to 74 11/16 for both money and the account.

The miscellaneous industrial market is quiet and irregular, and movements in the section relating to paper and print have occurred both ways. International Linotype have fallen 1 to 77–82; Linotype and Machinery A Deb. have dropped 1 to 59–64 and the B Deb. 1 to 45–50. Waterlow Brothers and Layton Ord. have risen ¼ to 5¼–6¼, and the Pref. of the same ¼ to 6¾–7¾. Business has been done during the past week in Amalgamated Press Pref. at 21s. 3d.; in Associated Newspapers Pref. at 20s. 6d. and 20s. 3d.; in Cassell and Co. at 5⅛; in John Dickinson and Co. Pref. at 101½; in Ilford Ord. at 13s. 6d. and 12s. 6d., and in the Pref. at 18s.; in *Illustrated London News* and *Sketch* Ord. at 4s., and in the Pref. at 14s. 3d. and 13s. 3d.; in International Linotype at 78½, 78½, 79, 80½, 78½, 77½ and 78; in Linotype and Machinery A Deb. at 61½, 60, 58½ and 58, and in the B Deb. at 47½, 45¾ and 45; in Edward Lloyd Pref. at 22s. 6d.; in George Newnes Pref. at 15s. 9d. and 15s. 9d.; in Spicer Bros. Pref. at 9⅜; in Raphael Tuck and Sons Ord. at 17s. 6xd. and in the Pref. at 5 1/16; in Waterlow and Sons Def. at 25½; and in Weldons Ord. at 31s. 3d., and in the Pref. at 19s. 3d., 19s. and 19s. 3d.

DIVIDENDS AND REPORTS.

CASSELL AND CO.—The report of Cassell and Co., Ltd., for 1912, to be submitted at the meeting on the 28th instant, states that, after making provision for bad and doubtful debts, and after providing for depreciation and all expenses of management, the accounts show a profit of £32,397. Deducting £4,276 interest on debentures, there remains £28,121, which, with £2,085 brought forward, makes the net balance £30,206. The directors recommend a dividend of 3½ per cent., less income-tax, leaving £16,285 to be dealt with. They propose to place £8,000 to the reserve fund and £6,000 to the copyright equalisation account, leaving £2,285 to be carried forward.

The report of *Freeman's Journal*, Ltd., states that the surplus of income over working expenditure for the year to December 31st was £2,942, the balance to credit from 1911 was £2,275, making together £5,217. After payment of debenture interest, £1,440, and amount allocated to bad debts reserve, as recommended in last report, £500, and amount recommended for allocation in last report to make provision for discounts and adjustments, £750, the sum remaining available is £2,527. The directors recommend that £1,000 be allocated as an addition to the bad debts fund, and that £500 be written off machinery for depreciation.

YORKSHIRE CONSERVATIVE NEWSPAPER.—The directors of the Yorkshire Conservative Newspaper Co., Ltd., recommend a dividend of £5 per share.

WINDING-UP PETITIONS.

ANGLO-RUSSIAN GAZETTE (1911), Ltd.

The petition for a compulsory winding-up order, before Mr. Justice Swinfen Eady on Tuesday, was allowed to stand over for a week.

CROYDON AND COUNTY NEWSPAPERS, Ltd.

Mr. Justice Swinfen Eady, on Tuesday, allowed the petition of W. Guppy and Co., for the compulsory winding-up of the company, to stand for a week, and gave liberty to amend.

COMMERCIAL INTELLIGENCE.

MR. H. BOTTOMLEY'S AFFAIRS.

An application was made on Monday to Mr. Justice Phillimore, sitting as Bankruptcy Judge in the King's Bench Division, arising out of the bankruptcy of Mr. Horatio Bottomley. Mr. Hansell stated that he appeared for Sir William B. Peat, the trustee under the bankruptcy, in support of the application which had been referred to his Lordship by Mr. Registrar Hope because it must raise some points of legal difficulty. It was an application that a certain portion of the debtor's salary payable to him by *John Bull*, Ltd., should be set aside for the benefit of the creditors. When *John Bull*, Ltd., were served with notice of the application they alleged that they had a charge upon the salary. Having regard to the fact that various points of considerable legal difficulty would have arisen with regard to the application, the parties had come to an agreement, subject to the sanction of the Court. The trustee, having obtained the consent of his committee of inspection, had agreed with *John Bull*, Ltd., and also with the debtor, that a substantial sum should be set aside for the benefit of the creditors on the terms of a minute which he (Mr. Hansell) had agreed with Mr. Frank Mellor, who appeared for *John Bull*, Ltd. His Lordship made an order in those terms.

Re ALEXANDER MACLEOD BURGHES, Agent.

This debtor, late of Paternoster-row, attended the other day, before Mr. Registrar Hope, at the London Bankruptcy Court, for public examination upon accounts showing gross liabilities £758 3s. 5d. (unsecured £678 13s. 10d.), and assets "bad book debt £10." Replying to Mr. E. Leadam Hough, senior official receiver, the debtor stated that he commenced business in 1879 as a business transfer agent in the printing, bookselling and stationery trades, and in the following year also as literary agent. In the course of his business he arranged for the purchase and sales of printing and other concerns, he further read manuscripts and submitted them to publishers. In February, 1907, in consequence of illness he withdrew from the business, there being a tacit understanding between himself and his son that the latter would take it over. Witness, however, regained his health in the following July and returned to the business which was subsequently continued as his own until December, 1910, when, being again in ill-health he retired, the business thereafter being continued by his son. No formal document was prepared to show the transfer of the business. Witness attributed his insolvency to bad trade, to the business having declined in 1910, mainly through his having been incapacitated from attending to it for about three months in consequence of an accident, to the drawings of himself and his son in that year having exceeded the net profit by over £400; to depreciation in the value of house property; and to loss on the forced sale of his household furniture. The examination was concluded.

THE COMPANIES ACTS, 1890 AND 1908.

WINDING-UP ORDER.

THE DAILY EXPRESS, LTD., 23, St. Bride's-street, London, E.C. Date of order, February 18th.

Digitized by Google

Vellum Binders and Machine Rulers' Pension Society.

There was a large assembly of members and friends at the St. Bride Institute, Bride-lane, E.C., on the 20th inst., for the seventieth annual meeting of this society and the election of a pensioner. Mr. A. C. Clements, of Messrs. Clements, Newling and Co., Ltd., presided. Mr. F. C. Peacock, the secretary, having read the notice convening the meeting, said a member of the firm of Clements, Newling and Co. required very little introduction to the members of this society, they having been among its most generous supporters nearly the whole of the seventy-one years it had now been in existence. He felt that Mr. Clements would receive a cordial welcome from all present.

Letters of apology for non-attendance were read, notably from Mr. B. Newling (a former trustee and member of the chairman's firm), expressing the pleasure it gave him to see the younger members of the business coming to the support of this society, and regretting that increasing years and infirmities prevented him being present with them, but enclosing a cheque as a solatium. Also one from Mr. Wm. Boyle (Boyle, Son and Watchurst, Ltd.), whose sixty odd years of membership and eighty odd of age still sit lightly upon him, but do not permit of the late hours of an annual meeting at St. Bride. He wrote that he still felt the same keen interest in the society's welfare, and expressed his regret at not being present to support the chairman. Three scrutineers being required for the election of a pensioner, Messrs. T. Hunt (Thomas and Son, Ltd.), W. H. Stewart (Truscott and Sons, Ltd.), and H. Cecil (C. and E. Leighton), were unanimously selected.

Mr. A. E. Clements, upon rising to submit the annual report and balance sheet for adoption, had a hearty greeting. He said it afforded him the greatest pleasure to occupy the chair that evening and support a society which the report showed, and they all knew, did such good work amongst the aged and worn out members of the joint trades. There had been a very long association between the firm which he represented and the Vellum Binders and Machine Rulers' Pension Society, an association which he trusted would long continue, and the letter they had heard read from the former head of his firm showed that the interest which Mr. B. Newling had always felt in the society's welfare still remained strong within him. He saw in the report instances quoted of the large sums received in pensions by individual recipients for the small sum contributed—in one case £644 for an outlay of under £2, and this made him wonder how any of those employed in the trade, who were eligible to become members, could remain outside their ranks. Such possibilities should, in his opinion, bring home its advantages to every worker, to which would be added the knowledge that by a little thrift in their younger days they not only made some provision for the darker days of need, should they come along, but that they made the path easier for some other unfortunate comrades. This feeling was good, both for those who contributed and those who received, and engendered a spirit of independence which he considered to be to the benefit of every man and woman. He saw death had been busy, and, amongst others, had taken from them one of the most earnest of their workers and committeemen, the late Mr. F. W. Gadenne. He trusted his good example would be remembered by those who followed him, and though gone from them, his good work for the cause would continue. This was the seventieth annual meeting, and although that period was looked upon as near the allotted span of life in man, the life of this society did not appear to be affected by its length of years, but seemed likely to go on improving and increasing. The best way, he thought, to ensure that result was for every member to make it his personal duty to bring the advantages of the society under the notice of every young man and woman in the trade, and to assist the executive in their efforts to obtain new subscribers and donors, and thus enable them to increase the number of pensioners, and prevent the disappointment of the unsuccessful candidate shut out for the lack of funds. He felt sure the good work of the society only needed to be brought persistently under the notice of the employer and employee for a considerable accession of strength both numerically and financially to be ensured. With considerable pleasure he moved the adoption of the report and balance-sheet for 1912. This, having been seconded, was carried unanimously.

The Secretary having given a *résumé* of the work done during the year, and made a special appeal for support of the Annual Benefit, which not only enabled them to support another pensioner, but brought the society under the notice of many persons who would not otherwise know of its existence. Also for their more generous support of the Printing and Allied Trades Charity Sports, which was doing so much for this and all other trade charities.

It was proposed by Mr. H. J. Mills, seconded by Mr. C. Burton, and carried unanimously, that the best thanks of this meeting be given to the Treasurer, Mr. Frank Garrett, for his valued services during the year.

Votes of thanks to the Trustees, proposed by Mr. J. F. Walker, seconded by Mr. W. Gueran, and to the auditors, moved by Messrs. Jacobs and Finch, were unanimously carried.

Mr. W. M. Newton (Clements, Newling and Co.) said that last year he had the pleasure of proposing that a hearty vote of thanks be given to the committee for their gratuitous services during the year, and he had great pleasure in doing so again this. They all knew that the success of societies like this depended entirely upon the enthusiasm and work of the committee and secretary, and he felt they were very fortunate in having such men as those who were now serving them. The society should be like a rolling snowball, for ever growing larger; and to ensure something in that direction, he should have much pleasure in increasing his subscription next year. He trusted the younger men would come to the front, and ensure continued activity and vigour in future. The vote having been seconded by Mr. P. R. Aves was carried with applause, and Mr. Higgins briefly responded.

The election for committee was then taken, and Messrs. J. Hall, R. W. Pearse and W. H. Stewart, being eligible, were unanimously re-elected; whilst Mr. W. Finch (Messrs. Burrup, Mathieson) and Mr. P. R. Aves (Bank of England) were elected to fill vacancies on same.

Mr. F. C. Peacock, after some complimentary remarks by the proposer, Mr. C. Atkins, and several other members, was unanimously re-elected secretary.

The counting of the ballot having been completed, the Chairman said he had to announce that Mr. H. Barton, with 128 votes polled that night and 191 brought forward, had a total of 319; Mr. J. Berryman, 81 that night and 68 brought forward, a total of 149; Mr. S. Chapman had polled 86; and Mrs. A. White 65, which, with 39 to bring forward, made her total 104. He, therefore, had to declare Mr. H. Barton duly elected. Mr. Barton briefly thanked the members and friends who had supported him.

This having concluded the agenda, Alderman T. J. Hunt said he had the pleasing duty to perform of proposing a sincere and cordial vote of thanks to their respected Chairman. A busy man from a busy firm, he still found time to assist them in their endeavours to lighten the lot of their more unfortunate and aged brethren of the trade; and he felt sure all would unite with him in wishing that both their Chairman and his honoured firm would long go on and prosper.

This having been seconded, was supported by the Secretary, who said it was always a pleasure to call at his firm, for however busy they might be, he was always courteously and kindly received; and when he pointed out that, in addition to the firm's annual subscription, Mr. B. Newling and Mr. W. M. Newton also subscribed individually, and he had also received a handsome cheque that evening from their Chairman, Mr. A. Clements, they would see how indebted they were to the firm, and he felt sure they would carry the vote with acclamation. This having been done, and Mr. Clements having returned thanks for their kindly vote, a very successful meeting concluded at 9.30.

The following tenders have been accepted:—For printing 75 copies of index to minutes for the year, for the Woolwich Borough Council, H. Price and Son. For printing work for the Corporation of Portsmouth, W. H. Barrell, Ltd., printing M.O.H. annual report, printing 50 copies of public analyst's report, W. T. Williams, Ltd., printing annual abstract of accounts, Charpentier and Co., supply of an Oliver typewriter. For supply of printing and stationery for the Corporation of Bristol, Jefferies, Sons and Co.

After all Permink is the only genuine Pen Carbon Paper which gives Universal Satisfaction!!

The Printing Crafts Guild.

The other Friday evening between fifty and sixty members of the Guild chartered a special from Manchester, and journeyed to the ancient town of Radcliffe, which is situated in the heart of the papermaking industry of Lancashire. Upon alighting, they were met by Mr. John Seddon, the under-manager, and received a hearty welcome, afterwards being transferred to the genial secretary, Mr. A. Ogden, who, on behalf of the East Lancashire Paper Mill Co., Ltd., set the wheels in motion for them to see the processes of paper manufacture from start to finish. When they gleaned the particulars of the ups and downs of this company, their thoughts wandered back to boyhood's days when old Daddy Walters called us from the middle of the class to give our first recitation.

It was on August 9th, 1860, that a few bright stars in Lancashire laid the first foundation stone for the buildings which were to house the business of "The East Lancashire Paper Mill Company." On that day there was feasting and rejoicing amongst the inhabitants, and by the summer of 1862 those optimistic satellites were able to see paper being manufactured. The business was commenced on something of the nature of co-partnership, because in 1863 we find the controlling power consisted of a chairman, machine committee, works committee, and financial committee. The company was one of the first limited liability companies in the district, and during its early career was very successful. After a run of some thirty years the satellites began to lose their luminosity, and darkness crept on until they were almost lost in chaos. However, about 1897, an extremely bright satellite which looked like a diamond in the eyes of the directors was discovered near Heap Bridge, and after the customary observations, was claimed by them in the person of Mr. Charles Robert Seddon, a gentleman who is thoroughly practical, and has that keen foresight which is possessed by few individuals. From the time that he came into the business to the present day Dame Fortune has extended to the company her bountiful smile, and one of the keys to unloose Fortune's gates was the discarding of old and obsolete methods and the replacement of the latest modern labour-saving devices. As years rolled on the management, whilst making further observations, noticed a small luminous body close to that of the Great Luminary. They carefully watched its development until they found that Mr. John Seddon, who, "Like father, like son," was a capable organiser and economist. He has fully come up to all expectations, and under the guidance of these two great lights, there is every prospect of many successful years for the East Lancashire Paper Co., Ltd. The party have had the pleasure of inspecting several paper mills during the last quarter-of-a-century, but never before had they seen such an excellent equipment of modern appliances, and such a cleanly and sanitary establishment. Their peregrinations took them through the esparto stores and willow-room, after which they saw esparto boiling, esparto washing, pulp store, pulp breakers and bleaching engines, wood pulp drainers, waste recovery house, beater-room, press-pâte, six paper machines, reeling machines, super-calenderer, cutters and layers, salle-room, reel store-room, mechanics' shop, water filters, electric generators, engine-room, soda recovery works, sample-room, etc. The company is one of the largest users of esparto in the North of England, and amongst the variety of papers made are printings, fine news, super-calender, imitation art, litho and music papers; chromo, enamelling, gumming and pasting papers; drawing, cartridges, antique laids and woves, writing and envelope papers, etc. In two hours' ramble they, as printers—[who was it said "spoilers"]—of all classes of paper, severely questioned their guides, Mr. W. Allen (chemist), Mr. Kirkman (engineer), Mr. J. Prestwich (foreman), Mr. A. Ogden (secretary), Messrs. W. Howarth and N. Allen (laboratory), and the "Little Philosopher," who so willingly assisted in his first attempt to act as guide and friend. However, every question put forward brought forth a satisfactory answer, and many came away with the thought that printers' troubles were insignificant compared with those of the paper manufacturer. All having again assembled in the Board Room, each willingly placed his autograph on the scroll of fame in the hope that when King George pays his visit to Lancashire in the summer he will add his royal autograph and endorse these views, "That the East Lancashire Paper Mill Co., Ltd., are truly worthy of all patronage and support that can be given by British subjects."

President R. B. Fishenden fittingly proposed a vote of thanks to the company, Mr. F. J. Hughes, hon. secretary, seconded, and Mr. A. Ogden in acknowledging same, stated he would convey it to the proper quarter.

WEE MACGREEGOR.

The Public and Commercial Advertising.

SIR,—The character and methods of commercial advertising have serious public importance. Every year adds to the number of respectable manufacturers and producers who use newspaper advertising and other methods of publicity. Great interests of one kind and another, including the newspaper Press, whose aggregate revenue from advertising must approach £100,000,000 per annum, derive support from the expenditure of advertisers. All of it is repaid through economies in the distribution of merchandise to the public and in the cost of selling goods.

An engineer, a chemical analyst, a patent agent, an accountant, or a specialist in almost any other important aid to commerce owes allegiance to some authority. The advertising community has no organisation for the protection of itself and of the public. An Institute of Advertising would have great public usefulness. It would protect this great commercial force from abuse. It would make advertising accessible to a great number of important producers who at present hold aloof from a mode of trade promotion which has no recognised ethics and no enforced standards. Thus such an institute would both promote advertising, and, by its disciplinary powers, protect the public. Its control should be independent and unselfish, the executive officers, while possessing practical experience, being debarred from individual practice.

Newspaper proprietors, printers, railway advertising contractors, billposters, and advertising agents could do a great public service by creating, what I submit that public interest urgently demands, an Institute of Commercial Advertising.

Yours, etc.,
THOMAS RUSSELL,
President of the Incorporated Society of Advertisement Consultants.

A Hint re

Deferred Valuation Orders.

I have definite order for, or intimation of, valuations (of printing or newspaper or studio or foundry plant) to be placed in my hands in the autumn, and even a year from date.

It becomes increasingly convenient and even necessary to fix up such arrangements many months ahead. Will printers therefore not refrain from communicating on the point merely because they may not want the valuation to be done at once,

Printing Crafts Guild.

A Lecture on Advertising.

At a recent meeting of the Manchester Printing Crafts Guild a lecture on "Advertising" was given by Mr. Oliver, from which we extract the following:—

Mr. OLIVER began by asking, "What is Advertising?" Continuing, he said: The word is derived from Latin "ad" meaning towards, and "vertere," to turn, thus literally to "turn towards." In its modern meaning, however, it implies much more than this. There have been many definitions put forward, but I think the most satisfactory one is "The art of selling through publicity." The reason I prefer it is because of the inclusion of the word "through." Under modern conditions in many branches of business life, it is quite impossible to effect direct sales by means of advertising, for instance in the case of large machinery, but there is no doubt that publicity is a very valuable factor in the sale, and it is *through* its instrumentality that the products of the firm are kept before the right public, so that when a purchase is contemplated, the advertising firm is given an opportunity to quote. There are people even in this enlightened age who doubt the efficacy of advertising. To be sure they are not many, and it is hardly necessary to defend the system for the benefit of this unprogressive minority.

It may, however, be interesting to consider (1) the development, and (2) the use or value of advertising. Modern advertising is essentially a development. Its recorded beginnings were way back in the days of ancient Rome, and it would seem that some kind of advertising has been felt to be necessary in all ages, though naturally not in the form of the printed page, poster, etc.

Speaking to an audience composed mainly of printers, or those connected with the printing craft, I need only say that modern advertising is the offspring of printing, and that the child developed into a full-grown man has in its turn materially assisted the craft to attains its present enormous dimensions and influence.

There is one aspect of our subject which must be mentioned at this point. Until comparatively recently an idea has been afloat that advertising is a medium for selling something of poor or doubtful value. Unfortunately, there has been in the past a considerable amount of truth in this idea; and even now one occasionally comes across examples of it. Let me say, however, that this is most emphatically not the rule nowadays. Whilst undoubtedly it is possible to make temporary sales of a doubtful or fraudulent character through the medium of advertising, in some form or other, it is absolutely impossible to build up a business on these lines.

It follows then that far from advertising being aimed at defrauding the public, it is a guarantee—the best possible—a guarantee of £ s. d. that the advertiser considers that he has something of value to offer, and that he is prepared to lay down large sums of money to let the public know that he sells it, and incidentally why it is better than other similar things. Also that he has confidence that the public will buy it and will keep on buying it. As has been truly said, "the wagging tongue of a satisfied customer is your best advertisement."

Another myth that is always popping up is that in the case of an extensively advertised product the consumer pays for the advertising. Nowadays it is usually impossible to manufacture economically on a small scale. Everything, from motor cars to matches, must be produced in large quantities, and it is only by advertising that the necessarily large sales can be effected. I am not sufficiently familiar with production costs to enlarge on this point, but I submit that those household commodities of which one is reminded on every hoarding, and in every newspaper, are not dearer than those which the shopman says are "just as good."

I have tried to indicate how consistent advertising is a guarantee of quality without increasing the cost of the commodity to the consumer. A very important point to the manufacturer—and I am referring now more particularly to the manufacturer of articles in general use—is that advertising limits price cutting.

The purpose of advertising is to give notice intelligently, and its primary aim is to sell goods. It all depends then on the amount of intelligence displayed in the cash appropriation, selection of media, preparation of "copy," including designs, trade marks, etc., and the display, how far it will be effective. I am going to ask you shortly to consider the steps necessary in the preparation of a press advertisement, because whilst I do not in any way wish to underrate the compositor's part of the work, I think that at times some printers are inclined to overlook the quite considerable amount of work necessary before the "copy" is complete, and I am anxious for all of us to have a better understanding of each other's work, to the end, I think, of a higher mutual appreciation.

We are, of course, all of us quite familiar with the so called advertising expert, who poses as an authority on typography, and breaks compositors' hearts by assuming that type is made of indiarubber, and stipulating twelve-point where only eight-point will go in, but then he is rapidly becoming more scarce, and on the occasions when he does appear the language of the composing-room is generally quite equal to the task of showing him the error of his ways.

Having dealt in a very brief manner with the broader aspect of advertising, let us now consider the various classes into which it may be divided. Let me say here, that these necessarily correspond with the method of marketing, and the area and location of the proposed selling ground.

Obviously, two methods of classification are open to us. These are (1) according to territory, and (2) according to method of marketing. No. 1—according to territory—can be sub divided into:—(a) Local advertising which is confined to a limited area and is generally put out by retail houses relying for their business on the residents in the immediate locality; and (b) General advertising, which may be either national or world-wide, and is usually in the interests of a manufacturer who, although he does not deal directly with the public aims at creating a demand, which the retailer will be compelled to meet by stocking his products.

The second method of classification—according to method of marketing—can be again divided into four divisions:—(a) Retail; (b) Mail order; (c) General publicity or indirect advertising; (d) Trade advertising.

In order to make this clear let us look at the various methods of merchandising available. There are six principal routes by which the goods may pass from the manufacturer to the consumer, and it must be understood that

THE commercial value of good taste, to buyers of printing, is marked by the rising demand for advertising managers, keen in their sense of appropriateness and expert in their knowledge of the harmonies of subject-matter with paper, type, form and colour.

¶ Of two catalogues, the same in purpose, but differing in quality, the one built on the laws of good taste will win by a margin big and decisive. Tests have proved this—and the truth of it is spreading.

¶ With this recognition has come an insistent call for men of good taste, and with the vision of its possibilities, who can plan, lay out, and put through the printing campaigns of high-grade houses.

¶ To such houses and to such men *The Graphic Arts* comes as a magazine full of suggestions, and educational features that stimulate good taste in all the factors that make for good printing.

¶ Send 30 cents for a sample copy.

these remarks refer *only to manufactured articles*. Raw material is an entirely different problem, and cannot be dealt with here.

No. 1 route involves three middlemen—the importer, the wholesaler and the retailer; No. 2, the wholesaler and the retailer; and No. 3, the retailer only. These will be seen to include the retailer in each case. Coming to No. 4, we have the manufacturer dealing directly with the consumer, and this is usually effected by means of a chain of shops. Routes No. 5 and 6 are more generally used in the United States than in Great Britain, though there is little doubt that the mail order business is developing very rapidly here. In No. 5 the manufacturer sells to the wholesaler, who supplies the mail order house; in No. 6, the mail order house buys direct from the manufacturer.

These then are the six main trade channels, but it must be understood that they may be modified to an unlimited extent and that endless combinations and variations occur. You will probably ask, "why not eliminate the middleman altogether, and save the profits absorbed by him?" The answer is simple. Very few firms manufacturing general commodities can afford to send their travellers to call on the thousands of small retailers all over the country to push the sale of the one thing they manufacture. The wholesaler, however, carrying a number of non-competitive lines, all appealing to one class of retailer, is able to take an order large enough to justify his time and expense.

We come back now to our classification of advertising and we can pass over the territorial method as it is covered by the various methods of marketing. These latter are, as you will remember:—(a) Retail; (b) Mail order; (c) General publicity; (d) Trade advertising.

Each of these classes must be dealt with as a separate proposition; the appeal must be different in each case, and the selection of media must be made with a view to the public which it is desired to reach.

How can one estimate the pulling value of a paper; how decide whether press, poster, novelty, circular letter or any other of the many methods of advertising will give the best return for a given outlay? Much can be done in the matter of selecting publications by enlisting the aid of a reputable agency. Many of them have great experience of the respective merits of different media, and some of them have file records of the comparative results obtained under certain definite conditions.

Now to apply this to our four methods of marketing:—(a) Retail. The object in this case is to attract the residents in the locality to the shop of the advertiser, and any of the following methods would be applicable. Local dailies or weeklies, church magazines and theatre programmes (these two latter generally charge ehxorbitant rates), tramcars, tram-tickets, local railway station advertising, house organ, house to house distribution of hand bills, screen advertising in local theatres, and, of course, attractive window displays; (b) Mail order. In this case the field is represented by the extent of postal facilities It is generally used by manufacturers who do not deal directly with the public, but who wish to create a demand for their products. The sphere of general publicity is absolutely unlimited and includes dailies, weeklies, monthlies, posters, show-cards, railway and tramway advertising in all forms. (d) Trade Advertising. The section we are now dealing with is undoubtedly the least developed of the four. The trade papers are chiefly used, supported by catalogues, etc., and those of you who are familiar with trade papers will, I am sure, agree with me that as far as their advertising is concerned, they are depressing to an extraordinary degree. Our American cousins are able to show us a decided lead in this respect, and as our magazines have improved by virtue of their example, so I am sure will our trade papers in the near future,

The older and more conservative papers seem to cling to the so-called Gothic type, the chief merit of which seems to be unlimited capacity for squashing large quantities of ink on to, and through to the other side of paper. May I appeal to all printers who are connected with trade papers to assist in the work of overthrowing the Gothic tradition, and helping on to a cleaner and more refined state of affairs. Even our printing trade papers, which should take the lead in these matters, are inferior typographically in many respects to the monthly magazines.

Having selected the papers most suited to our requirements, we are faced with the problem of filling the space we have bought to the best advantage; in other words, presuming the selection has been sound, we have obtained an interview with the prospective customer, and now have to decide what we are going to say to him in order to effect a sale. Our "copy" will, of course, have to be totally different for each of the four classes of advertising, just in the same way that the media were selected. There are, however, two great divisions into which "copy" may be divided, *i.e.*, "reminding" or "suggestive copy" and "reason why" copy. In the first named, the aim of the advertiser is simply to keep his name or the name of his product fresh in the mind of the public.

Reminding copy depends on the cumulative effect of repetition rather than on description and argument, and is used mainly in connection with general publicity.

"Reason why" copy, or "salesmanship on paper" is the happy hunting ground of the able copy writer. While it has probably as much cumulative effect as the purely reminder advertisement. It aims at, and if properly written and arranged, achieves a great deal more. In the case of mail order advertising, its purpose is to effect a sale; in retail advertising, to bring the prospective purchaser to the shop; and in trade advertising generally to create an enquiry, although direct sales may be made in some cases.

In spite of all the alluring offers of schools of advertising, it is quite impossible to write satisfactory "copy" according to rule. There are, however, a number of steps through which the mind of the reader must be taken before the decision to buy is reached.

(a) In the first place, favourable attention must be obtained, as, unless the advertisement is noticed it will not have much effect. In the case of whole-page newspaper advertisements there is little danger of their passing unnoticed; their very size and weight is sufficient to ensure their being seen.. It is

essential, however, that the attention should be of a favourable nature.

The means of securing favourable attention are of course by attractive display and illustration. The headline is a most important part of the advertisement in this connection, and must be of a selective nature, so as to attract and hold the attention of those interested in the commodity to be sold. It may take one of many forms, but in all cases should be terse and to the point, so that the reader may take in the meaning at a glance. Tests were recently made with a view to determining the number of words which could be read in this manner, the decision being that from three to five formed the ideal number, and that when five are used they should be short ones.

But, important as the headline is, there can be little doubt that the main attention-making force of the advertisement must be in the general appearance, the *tout ensemble*. As the science develops so does the taste of the public, and nowadays I am sure most readers are attracted by a tasteful display with artistic borders and suitable illustration, if the subject is susceptible of it. In this connection it is always advisable to depict the article in use wherever possible.

(To be continued.)

Paper for Offset Machines.

Occasionally one hears of "offset paper." Well, all paper is good paper for offset printing, and there is nothing peculiar about that when the offset process is understood. Any kind of paper that can be printed on at all can be printed on by the offset process—provided, of course, that it is not so cheap and utterly devoid of strength that it will not stand the slight strain of the grippers holding it while it is being carried around the cylinder.

Specimens of offset printing have been sent in from many shops using offset presses printed on numerous kinds of paper, from the thickest and softest to the thinnest and hardest, and good work has been done on them. We have specimens of work done on the cheapest and thinnest of label paper, in many colours. Specimens of post cards are common. Blotter has been printed frequently, and fine half tones on hard bond paper are common among the products of the offset press. And so it is safe to say that every paper which is used in the printing and lithographing shops of the country could be included in the list of "offset papers." The sooner the lithographic salesman finds the truth of this statement and commits it to memory the sooner he will cease to have trouble in landing work for the offset press.

Not only will the offset press successfully handle all kinds of paper, but it will handle them dry. Many kinds of paper have to be dampened in order to properly print on a stone press—notably hard bond paper—but in the case of the offset no dampening is necessary. The rubber blanket will pick up and reproduce every line and dot in a half-tone on a hard paper without dampening.—*National Lithographer.*

Stationery Exports.

The following are the exports of stationery, other than paper, from the United Kingdom for the month of January, compared with the corresponding month of the two previous years:—

To Germany ...	£7,931	£8,569	£12,840
„ France	4,735	4,026	3,663
„ United States of America ...	6,294	5,339	4,59ff
„ British India ...	15,012	15,503	18,883
„ Straits Settlements ...	3,627	3,768	4,518
„ Ceylon	2,180	1,741	2,935
„ Australia ...	12,956	13,781	14,887
„ New Zealand ...	2,901	4,068	4,257
„ Canada	4,003	5,525	6,689
„ Other Countries	70,847	76,119	78,251
Total... ...	£130,486	£138,449	£151,515

DURING the year 1911 the value of the stationery stores purchased by the South African Government Railways was £50,572.

Safety Bronzing Cabinet

Patent No. 11291/10.

Cabinet Open, and showing Detachable Tray.

BEST QUALITY WORK
NO DANGER TO OPERATOR
NO WASTE OF BRONZE
INCREASED OUTPUT

THIS Bronzing Apparatus has been introduced to enable Bronze Powders, etc., to be applied by hand without any particles of powder floating about the room, or being inhaled by the operator.

It consists, as shown in the illustration, of a box fitted with hinged transparent top and transparent ends. The side nearest the operator has apertures fitted with flexible sleeves with springs to close round the wrists of the operator, so that, although his hands and arms are free to move inside the box, no powder can escape.

The bottom of box is perforated and allows the surplus powder to fall into a detachable tray underneath. The sheets or cards to be bronzed are fed direct from the platen into a narrow horizontal slit fitted with sloping feed board.

This apparatus is made throughout in our own Works, and the edges of the lid and detachable parts are made dustproof. There is no waste of bronze and no injury to the health of the operator, and nothing to wear out. The bronzing is executed immediately under the eyes of the operator, ensuring finest quality work.

The Consumer OF PRINTING

THERE IS BUYING POWER FOR THE MERCHANT, MANUFACTURER OR PUBLISHER—IN FACT, ANY CONSUMER OF PRINTING —IN THE QUALITY OF HIS PRINTING.

Quality in printing, as well as pulling power, is largely good composition, and if you give the purchaser quality you create a satisfied customer.

There is business-building power and prestige for the printer in his ability to help his customers tell about their goods in an attractive and forcible way.

Advertisers want distinctive faces : and distinctive faces—to set by hand—cost money.

THE MONOTYPE COMPOSING MACHINE IS THE ONLY EFFICIENT MACHINE THAT GUARANTEES A PRODUCT EQUAL TO NEW FOUNDRY TYPE SET BY HAND, AND IS, IN ADDITION, A COMPLETE TYPE FOUNDRY, BECAUSE IT WILL CAST ALL DISPLAY TYPE, BORDERS, ORNAMENTS AND SPACING MATERIAL UP TO AND INCLUDING 36 POINT.

E & S "ALBERT GALVANO" QUALITY

WHAT IS AN ELECTRO

As applied to Colour Printing?

Last month it was shown that an A. G. (Lead Moulded) Electro is an exact duplicate of the original—possessing all the fine printing qualities of the original. Following this line of reasoning a step further, it will be seen that since each electro is an exact replica of its original, colour electros by this process must register perfectly.

We Want You to Grasp This:

If you take, say, four or eight sets of these colour electros, they are so perfect that, taken colour for colour, they are not only interchangeable amongst themselves, but also with the original.

Another point—It is impossible for the process engraver to produce duplicate originals of colour blocks that are identical in colour values with the first (original) set, no matter what price you pay.

Albert Galvanos are absolute facsimile, and show a saving of approximately 75% over the cost of these less satisfactory duplicate originals.

Postage Stamp Printing.

A High-Speed American Machine.

In a recent issue of the *Philadelphia Record* there appeared an account of a new postage stamp-making machine invented in the United States. The machine, it is claimed, eliminates twenty-three processes in the old method of printing postage stamps; the only use, so far, to which it has been applied. The paper is fed automatically from the roll, enclosed in a safe-cylinder, to the press, which prints the stamps, dries the ink so that there is no trace of offset, gums the back of the stamp-printed roll, dries the gum, perforates and counts, and either rolls up the strips of stamps or slits them into strips of a single stamp's thickness for use in stamp-vending machines, also rolling them up, or cutting them into sheets, which are automatically fastened into packages of the required number. This machine is the invention of Mr. B. R. Stickney, a mechanical expert and designer to the Bureau of Engraving and Printing, at Washington; his machine, it is declared, leaves nothing to be done, nothing to be added, and is complete in every particular. The stamp is made, and made in finished form, only a moment after it leaves the original roll.

The device also means a great saving in space occupied and in manual labour. The press is about three feet wide and twenty-five feet long, with a height of seven feet. Human direction will be required only to run the press and to direct the perforating machine - a man and a girl will make a crew.

In the old way of making stamps there was much handling, with many separate processes. The paper on which the stamps were printed was regarded as a valuable asset, and had to be guarded, so that in the unprinted bulk it was carried to a place of security after work every night, and back again to the presses every morning. The paper, before it is ready for printing by the new process must be made wet, and wet according to a certain accurate standard of moisture.

This is done by a machine of Mr. Stickney's devising, whereas until two years ago it was done by hand. The old stamp presses could not apply the pressure necessary for dry printing. The plate printing press which Mr. Stickney has evolved prints from the dry paper. The paper in the roll is locked into a sheet-metal cylinder box, whence it does not have to be removed for safety after work hours, but can be fastened and locked up just where it is.

From a slot in this cylinder box the roll is fed automatically into the press, with devices which regulate the tension, an important factor in the feed operation. The sheet of unrolling paper ascends over rollers and is fed from overhead into the press. It passes down between the feed roller and the printing cylinder, on which is fixed the engraved plate from which the stamps are printed, receiving the impression in passing. The steel-engraved plate is in one piece. Rolled into a perfect circle, the plate is attached to the plate cylinder by means of recesses on the under side of the plate and clamps on the plate cylinder, so that the edges are brought together perfectly, forming a uniform face of a stamp engraving, without break or variation in the registry at the point where the plate's edges are joined.

The feed roller is controlled by a small wheel so that varying pressure, according to the requirements of the operation, can be applied to improve the character of the impression from the ink. In order to enable the printing to be done on dry paper, eliminating the moistening of the paper in the old method, a tremendous pressure is needed at all times, and this is attained by means of the feed roller. The plate is wiped dry of surplus ink by a vibrating device, felt faced, over which is fed automatically a wiping cloth from a roll that needs to be replenished about three times a day.

The ink fount is just to the rear of the plate cylinder. It is fed on the plate by automatic arrangements that insure an even distribution. The paper, having received the stamp impression from the engraved plate, proceeds to a roller at the bottom of the press, and then ascends again to the top, where it passes through a group of ten cylinders, all heated by electricity.

This is the method of drying the ink, and so effective is it that not a trace of offset is shown. From this drying battery the paper descends to the gummer. A glass cylinder, a device invented in the Bureau to do away with the corrosion and dirt of brass cylinders, distributes the gum evenly over the imprinted side of the paper roll as it proceeds at great speed. Through the steam-heated drying box, about eight feet long, passes the roll for the drying of the gum. A metal roller, with slight corrugations encircling it, breaks the dry, hard gum as the paper passes over it.

About Carbon Paper.

Mr. H. C. Pindar, of the Union Ribbon and Carbon Co., gave the following interesting address on carbon papers and their manufacture, before the Philadelphia Stationers' Association, at a recent meeting of that body:—

"It affords me great pleasure to be given this opportunity to address you upon a subject which is very interesting to me, and is becoming more interesting to you every day. As you well know, the demand for carbon paper is increasing all the time; as a method of record it has almost entirely displaced the letterpress and copy book, and there is good profit for you in this branch of your business, if handled intelligently. Most of my talk to-night will be for the benefit of the men who sell carbon paper, and I hope to be able to give them some information that will enable them to serve their customers more intelligently.

"Nine people out of ten, who use carbon paper, do not use the kind of a sheet that should be used to get the best results on the particular work which they are turning out, and it is important that you should be able to put your customer right, and tell him why you are recommending a certain sheet for his work; it will show him that you are interested in him; that you have a knowledge of the article which you are selling; and, if you happen to be the only man who has given him some information on the subject that will benefit him, he is going to appreciate it, and it seems to me that you would be the man who would get the repeat orders, and these repeat orders are the ones that count. Until you get the repeat order you do not know whether either your talk or the goods first delivered were satisfactory.

"Carbon paper, and at this time we will only consider typewritten carbon, is made in three weights:— 7 pound or standard, 5½ pound or medium, 4 pound or light weight; and these three weights are made for a reason. The 7 pound or standard weight sheet is made for use when one to three copies are desired, the 5½ pound or medium when five to eight copies are required, and the 4 pound or light weight when eight to twenty copies are necessary.

"In addition to the different weights, there are innumerable coatings, but classified as hard, medium and soft. The sheet which has a hard coating, one tnat you cannot disturb, even by heavy pressure between the thumb and finger, is intended for a few clean, clear, not strong, copies, and the maximum of durability. For instance: the 7 pound sheet will give from one to three nice, clean copies, and you can rub your finger over the copy and not smear the work in the least; if you hold the sheet of carbon up to the light, you will note that but little of the coating has been removed, showing it to be a durable sheet. A sheet of this kind ought to be good for at least a hundred letters, in other words, it could be used a hundred times. Now when you sell a customer a sheet of this quality, you are giving him the best possible value for his money, and here I am going to give you a few reasons why this class of goods is so much superior to other grades, so that, when you ask good prices, you will know that you are not only justified in doing so, but are really doing your customer a favour if you succeed in selling him a good grade of carbon.

"To begin with, the paper upon which the 'dope' is run costs 45 cents per pound; and you gentlemen know that a 45-cent paper must be a pretty good sheet; the wax that is used costs 52 cents to 60 cents per pound, latest quotation; the colour from $1 to $2.50 per pound. Now please try to carry all of this in your mind until I have finished. These are just the cost of the raw materials, and when you add to these the labour of extracting all the impurities from the wax, the weighing out of the colours, sometimes to a few grammes, the mixing of the colours, always at a certain temperature, the grinding and re-grinding of these colours, they having to go through the grinding machine as often as eight or ten times, and these grinding machines by the way, cost something like $800 to $1,000 each, the mixing of the wax with the properly ground colour, watching the thermometer all the time, and finally the application of the 'dope' to the paper, which, in itself, is a very important part of the work and a very trying proposition because of lack of uniformity in the paper itself.

"In spite of the high cost of this paper, one edge may be thicker than the other, causing it to hug the ink roll tighter than the other edge, or the paper may be wound carelessly, or on an imperfect core, and be tight in the centre and loose on both edges. It means that it requires the constant attention of a man from the time the paper is put into the machine until it is taken off with the coating on it. As soon as the roll of paper is in place the machine is started, and the man adjusts the paper feed and guide rolls. When these are working properly he looks at the coating, and as soon as he thinks it is right he tears off a piece from the roll, stops the machine, and compares the piece with a standard sheet; if it is all right he goes ahead; if not, he adjusts the coating regulator and then makes another comparison, and under no circumstances does he proceed with the run until the sheet tests up to the standard sheet. He must be sure that each of the machine rolls has its respective temperatue so that the finish

Digitized by Google

of the sheet will be right; he must see to it that the brushes or jiggers are properly adjusted; in fact, the entire job is one which requires constant care and skill.

"All of the reputable manufacturers, making a high-grade sheet, use the same grade of paper which I referred to earlier in my talk, Crompton by name. This paper comes from a small town—Bury, I think—in England; they all use the high-grade Canauba or vegetable wax. This wax collects on the leaves of certain trees in Brazil, and is simply scraped from the leaves. They all use the same high-grade pigment colours, not necessarily from the colour makers, but high-grade colours just the same; and they all exercise the same care and diligence in the compounding and running of the product, so that you cannot get in wrong when you handle the goods from any of these manufacturers. The goods to be let alone are those made with fugitive colours, and we will come to those later.

"Now that we know the cost of materials, and have some idea of the care exercised in the manufacture of the goods let us return to the customer. You call upon him and seek an order and, perhaps, he tells you to send him a box of carbon. You ask the colour, size and weight, and he replies, 'black, light weight, 8½ by 11'; here is your chance to find out if he is using the proper weight sheet, and you should ask him how many copies he requires at one writing? If he says three or four, you will suggest the use of a medium or a standard-weight sheet and tell him why. When giving this advice and deciding whether the 7-pound or 5½-pound weight is the preferable, you must take into consideration the weight of his letter paper and second sheets, also the make of typewriter and the style of type. This may seem strange to you, but when I tell you that no two makes of machines strikes the same blow, and that the difference between the heaviest and the lightest is greater than the difference between a light-inked ribbon and a heavy-inked one, you will realise that it makes quite a difference and must be considered; if a machine is fitted with 'Elite' or small type (a size which is becoming quite popular), you should recommend the medium-weight sheet and sell him the hard, clean goods, because this style of type, on account of small size, particularly the characters and fractions, will only make a blurr if struck through too great a thickness, or if the 'dope' is so sensitive that a lot is given off at a writing. I don't propose to talk ribbons, but will just say that only a lightly inked ribbon should be sold for this style of type if the best class of work is desired.

"If the machine is one that strikes a strong blow, and is fitted with 'pica' type or larger, the 7-pound sheet will give the requisite number of copies and will last much longer, for two reasons. One is because it carries more 'dope' than the lighter sheets, and the other is that it will not wrinkle or 'tree' so readily if machine feed-rolls are not true. As soon as a sheet 'trees' it is thrown away because wherever the 'tree' occurs the copy will be blurred and illegible.

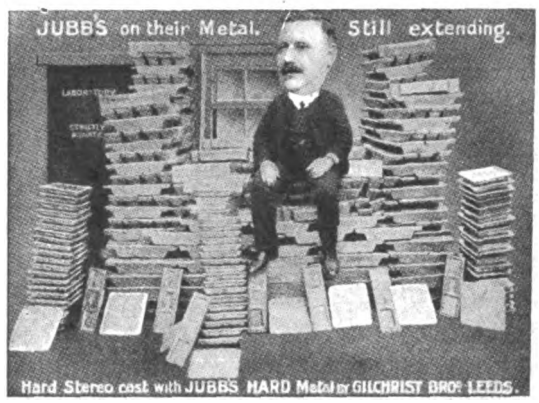
"If your customer is one who is accustomed to a stronger writing sheet and prefers it to the hard sheet, it is up to you to tell him which weight he should use, and you must decide whether to give him the medium sensitive or soft sheet, remembering all the time that the softer and stronger writing on the sheet the less wear it will give and the dirtier the copy after it has been handled a few times.

"Now it may interest you to hear something about the cheap end of the business, though possibly none of you have any cheap competition, and I will try to give you a few points. We will now forget the Crompton paper, and we have left the French, Austrian and domestic. There is very little difference in the cost of these papers; the cost of running, inspecting, cutting and boxing a cheap sheet is just the same as for the best grade, so there is but one place to cheapen the article and that is the 'dope.' The colour used is cheaper, the wax used is generally a mineral wax, some costing as high as 15 cents and others as low as 5 cents per pound; these mineral waxes contain a large percentage of sulphur which tends to kill the colour and detracts greatly from its permanency. You can readily see that the cheap sheet is not cheap after all, and yet you feel compelled to handle a certain amount of it; but with this information you will be in a position to tell your customer just what he may expect, and will probably be able to sell him a better grade. The cheap sheet can be made to look just as nice as the better grade, so looks count for nothing, and to emphasise this I will tell about the best looking, and at the same time the most dangerous sheet, and the one that you probably understand the least—namely, the '*oil*' sheet, or the sheet made with oil colours.

"These colours are soluble in oil and have great covering power because of their solubility; they cost about half as much as the cheapest pigment colours, and an ounce will cover as much surface as a pound of pigment colour, and, worst of all, the work of a sheet made with oil colour is stronger, brighter, has more tone and brilliancy than the highest grade sheet made. You can now understand how it is possible for some manufacturers to furnish a sheet at a very low figure, and also why the ignorant consumer buys the sheet.

"The manufacturer knows that these colours are absolutely fugitive; most of the men selling these goods do not know and do not care, looking only to their profit. As a matter of fact the sheet made with oil colour is absolutely worthless, and you should impress this upon the mind of any customer who uses such a sheet. Most men will appreciate the information, and will not only abandon the sheet but will immediately have duplicates made of all their important records. To emphasise this, I will relate the experience of one of the largest users of carbon paper.

"The buyer did not purchase a straight oil sheet but one that contained a large percentage of oil colour, put in to tone up the other colours used, and he was ignorant of this even. He was simply doing what a great many large buyers are doing to-day, only looking at the saving in purchase price. He bought a large quantity and distributed it to the various branches of his company, and in the course of a year one of the branches burned out, practically everything being destroyed excepting the contents of the fireproof safes. Upon opening these the papers were found intact, but when they were taken out and examined, they were perfectly blank, not a vestige of colour upon them, every record of this immense business gone."



SIAM.—The imports of stationery into the district of Puket, during the year ended March 31st last, were of the value of £3,021, as compared with only £1,996 in the preceding financial year.

Stationers' Social Society.

Ladies Entertained.

It was a very happy and enjoyable gathering that took place at the Grand Hall of the Hotel Cecil on Saturday night. The occasion was the 29th annual winter dinner of that flourishing body known as the Stationers' Social Society, and the success and brilliance of the function was enhanced by the presence of the fair sex, a feature that has grown in favour during the last four years. The newly-elected president is Mr. W. Börnecke, a partner in the well-known firm of Messrs. H. Bertram and Co., of 12-13, Upper Thames-street, E.C., and judging from the hearty reception accorded to him during the evening, his election is a most popular one. The President and Mrs Bornecke received the members and guests, and when dinner was announced the gathering numbered over 200. Amongst those present were:—Messrs. J. Brough, F. L. Cayzer, W. E. Green, W. A. Kershaw, C. D. Marshall, R. E. Wedgwood, J. A. Kidd, F. E. Wrigley, J. W. Kahrel, A. L. Panton, L. Lightfoot, C. T. Cork, R. Kemp, R. Poole, F. Crossley, A. F. Hall, J. Waldron, A. E. Brown, M. Relph, J. G. Morrison, H. Buck, G. Thomerson, C. W. Davidson, G. S. Weeks, F. Ross, W. Darkin, M. Henry, W. Bass, J. F. Whitburn, P. Kennett, C. Pretzlik, P. S. Porteous, G. J. Ralph, C. D'Oyley Mears, W. V. Marchant, E. H. Sharman, J. G. L. Smith, R. Bowater, N. Bowater, J. T. Tunbridge, H. Ling, J. Dobson, E. H. Raynham, E. Gray, J. Atkins, E. M. Fells, G. Buchanan, J. W. Johnston, J. Wilson, R. R. McKenzie (hon. sec.), A. E. Mist (assistant hon. sec.), etc., etc. An excellent dinner was served, after which grace was rendered by Miss Ethel Williams, Miss Mary Williams, Mr. Harold Wilde and Mr. Harry Barratt.

The loyal toasts having been duly honoured,

A Presentation

was made to Mr. John A. Kidd, the late president of the Society.

The President, in rising to perform this pleasurable task, was greeted with quite an ovation. He said it was twenty years since he had made Mr. Kidd's acquaintance, and

Photo, Arthur Weston, London, E.C.

Mr. W. Börnecke.
(President).

they had rubbed shoulders together in business rivalry, without in any way interfering with friendship. In the name of the Society, he thanked Mr. Kidd for the splendid work he had done during his year of office. He had, by his influence and charming manners, upheld and added to the dignity of the Society in the paper trade. Many new members had joined. Mr. Kidd had also revived the summer outing. He (the President) had great pleasure in handing to Mr. Kidd a past-President's badge. [The proceeding of attaching it to his coat was greeted with enthusiastic applause.] Continuing, the President said he was sure Mr. Kidd would always honour the badge, and it would remind him of the pleasant hours spent in advancing the welfare of the Society. He regretted that Mrs. Kidd was absent owing to illness, and he expressed the best wishes of the company for her speedy recovery. He asked them to drink to the health of their past-President and his dear wife.

Mr. John A. Kidd expressed his thanks for the kind references to his presidency of the Society. He was afraid their president had been too flattering. ("No, no.") Having been honoured in being elected as president, he had tried to make their social functions as successful as possible, and he was glad that they had met with the approbation of the Society. He greatly appreciated the presentation just made to him of a past-president's badge, which would serve to remind him in days to come of the pleasure he had had in the chair. He wished to thank their president for the kind words he had spoken in reference to his dear wife, who, he was glad to say, was much better in health, and, he hoped, was well on the way to an early recovery. He congratulated their president on his election, which was popular with all members of the Society, and he wished him a happy and prosperous year of office (applause).

"The Paper Trade."

In submitting the toast of "The Paper Trade," the President referred to the influence for good exercised by the Society, which had a membership of over 200. They did not pretend to interfere with business, but by holding social gatherings they met on common ground and promoted a strong friendly feeling. The result was that business was made smoother. He was glad to say that the paper trade had had a successful year, and papermakers had done well, also paper merchants and the wholesale trade. This prosperity was all the more remarkable, as difficulties had had to be contended with, for instance, the railway strike, the coal strike, and the London dock strike. The export trade was also good, and the British colonies were increasing their purchasing power. Canada, he considered, as a good market. Although increasing quantities of news were being made in that country, he thought there was an increased outlet for many other qualities of paper. Canada, too, was destined to become one of the largest suppliers of raw materials. Trade was likely to be good, particularly when the uncertainty in regard to political affairs was removed, The paper trade had to face higher costs of raw materials, and enterprise had been shown, in order to reduce manufacturing expenses, by the installation of improved machinery. In the manufacture of paper they had drawn upon resources which had not been replaced by nature, and he was afraid that higher prices must prevail in the future. Connected with the industry, however, they had many clever gentlemen able to grapple with any situation that may develop. They had that evening the pleasure to welcome as one of their guests Mr. J. Rowland Brough, head of Messrs. Brown, Brough and Co., who, in spite of his business claims, took an active interest in civic affairs. Mr. Brough had been Mayor of Stoke Newington, and had been elected deputy alderman of one of the City of London wards. In coupling his name with the toast he was sure they all extended to him a hearty welcome. (Applause.)

Mr. J. R. Brough, in response, expressed his thanks on behalf of himself and Mrs. Brough, for their kind reception. He was honoured in being called to respond to the paper trade, which he described as a varied trade. It was admitted that in Parliamentary life, however bitter and severe a man's remarks concerning another in the House may be, outside they would link arms together; so it was in their business life, the many jealousies were overcome by social gatherings that had been a feature of this Society for some thirty years. His experience of the paper trade covered a period of 34 years, and consequently one was prone to indulge in reminiscences, which, however, he would not encourage in view of the excellent musical programme which had been arranged for their delectation. Enormous changes had taken place in the paper trade. At one time they secured good sized orders, but to-day they were rung up on the telephone for supplies for immediate requirements, and promptitude was necessary in order to maintain custom. The wholesale stationer was ground down between the agent and the consumer. The paper agent comprised two classes—the good and the bad. The foreign agents on the plea that prices would go up booked good orders, and paid nothing in the way of taxes in this country. The other class, like their esteemed president, settled down in this country, and thus took his share of the burdens. The speaker then referred to the advantage of unity in the trade, and mentioned the Associated Stationers as an organisation that had done some good. He instanced the action of the railway companies in the matter of the dispatch of parcels, pointing out that as an individual concern very little redress could be obtained, but with a body of traders their views received more consideration. He advocated the value of social intercourse, as it tended to remove the asperities of business life. Reference had been made to the City Corporation, with which many prominent members of the paper trade and of this Society had been and were connected. He recalled Lord Mayor Green, Sir T. Vezey Strong, and his (the speaker's) own Alderman, Sir T. Vansittart Bowater, who would be shortly in the civic chair. In conclusion, the speaker said it was his first visit to one of their gatherings, and he was glad to find himself amongst them.

"The Visitors."

This toast, with which was incorporated "The Ladies," was proposed by Mr. W. E. Green. He was sure all members were pleased to see so many ladies present, and he thought it possible, in a few years time, they might have a lady president. In appreciation of their presence, he asked the ladies to accept a small present. [A cut-glass bottle of perfume, neatly and tastefully encased in a fancy box, with card enclosed, "With the Stationers' Social Society's compliments, March 1st, 1913," was handed round to each lady.] Continuing, Mr. Green said they had during the many years existence of their Society many members who had first been visitors, and he hoped those visitors present that evening would in due time become members. Their number was unlimited.

Mr. Simmons briefly responded on behalf of himself and other visitors and thanked the Society for their hospitality.

"The President."

Mr. E. M. Fells, in submitting this toast, regarded it as the toast of the evening. He predicted for their president a record year. It was a happy inspiration of their committee to let their choice fall on Mr. Bornecke, who, although not a British subject, was held in the highest regard and esteem. It was not, he thought, since 1889 that a representative of foreign pnpermakers had been elected to the office of President. Since taking the chair he (the president) had introduced sixteen new members, and every one bid fair to become future presidents. Those who were brought into friendly rivalry with their president knew his many good qualities; he had the happy faculty of wearing a smile that "won't come off." He was one of the best, and the speaker asked that the toast be received with record enthusiasm.

The President, in reply, thanked Mr. Fells for his kind words, and the members for their hearty acceptance of the toast. It was with the promise of their support that he had the courage to accept the office of president. During the many years he had been in this country he had made many friends, and he was proud to be their first president not of British blood. He appreciated the fact that, as Englishmen they were fair and broad-minded, and that the question of being a foreigner did not stand in the way. He took the opportunity of thanking the members of the committee, and Mr. McKenzie, the hon. secretary, for the immense amount of work performed in carrying out the arrangements for that evening's gathering; also Mr. Bradshaw, the musical director, in providing so excellent a programme. He asked the company to testify their appreciation by clapping hands.

The Musical Programme.

A feature of the gatherings of the Stationers' Social Society is the prominence given

to the musical programme, and on the present occasion the arrangement was such as to give the highest satisfaction and pleasure. Mr. R. E. Bradshaw, the musical director, evidently has the happy faculty of selecting the right artistes. The contributions, without exception, met with an enthusiastic reception, and encores were the order of the evening. The artistes included Miss Ethel Williams, Miss Mary Williams, Mr. Harold Wilde, Mr. Harry Barratt, Mr. Will Edwards, Mr. Will Bentley, Mr. Cornll Bard, and Mr. Clifton Richards, with Mr. William E. Manaton at the piano.

The proceedings terminated shortly after 11 o'clock, with the singing of "Auld Lang Syne," and the committee—Messrs. E. Bradshaw, A. E. Brown, F. L. Cayzer, W. E. Green, Matthew Henry, P. S. Porteous, and G. S. Weeks, with Mr. R. K. McKenzie (hon. secretary) and Mr. A. E. Mist (hon. assistant secretary)—are to be congratulated on their successful arrangements.

Trade Notes.

THE *Acadian Recorder*, a well-known news paper published in Halifax, Nova Scotia, has just celebrated its one-hundreth anniversary.

FOR printing the band programmes for 1913, for the Corporation of Southend-on-Sea, the tender of Mr. J. Francis and Sons, Southend, has been accepted.

AT the annual meeting of the Radcliffe and District Newsagents' Association, the other day, Mr. J. H. Hall was elected president, Mr. Tom Lord, jun., treasurer, and Mr. Harry Garner, secretary. Mr. James Booth was appointed delegate to the Northern Counties Federation of Newsagents.

MR. DUNCAN CAMPBELL, who was for 26 years editor of the *Northern Chronicle*, Inverness, was entertained at a cake and wine banquet in the Alexandra Hotel in that town, and presented with a cheque for £72, on the occasion of his departure for Aberfeldy, his native district. A silver salver was presented to Mrs. Campbell.

IN the case of Leicester *v.* Dixon and Co., Ltd., of Liverpool, in the King's Bench Division, on February 20th, we understand that an appeal was lodged on Monday against the judge's decision on the question of execution in regard to the orders obtained by the plaintiff for the defendants in the course of business. A report of the case appeared in the *British and Colonial Printer and Stationer* on February 27th.

MESSRS. F. E. BROWN AND CO., manufacturers of the original diamond-engraved screens for process engravers, "Diamond" Works, 5½, Guthlaxton-street, Leicester, have appointed Mr. Wm. Ziegler, 55, Berners-street, W., as agent for the sale of their screens, etc., in London. Mr. Ziegler holds a good range of samples of different rulings, and besides screens, stocks lens, prisms, process plates, bromide and gas-light papers, etc.

MESSRS. JOHN SWAIN AND SON, LTD., Columbia House, 89-90, Shoe-lane, Fleet-street, E.C., have issued a very effective calendar for 1913. On an extra thick board measuring 15 by 20 inches is the firm's name, boldly printed at the top, monthly tear-off tablet at the bottom with trade description and address, while the centre is occupied by a fine coloured print of a modern liner side by side with a vessel of Elizabethan days, to which the significant title "Progress" is appended.

THE Ilford Auxiliary to the Printers' Pension, Almshouses and Orphan Asylum Corporation held their Bohemian Concert in the Masonic Hall, at the "Cauliflower" Hotel, Ilford, on Saturday evening last. Presided over by Mr. E. W. H. Walker. The concert was a great success, and the result of the collection for the charity was the largest during the present session. The president was supported by several well-known gentlemen in the printing trade. Among whom were Messrs. J. Mortimer, C. H. Drummond, F. H. Walker, H. W. Howes, E. Shanks, A. Paul, W. Peasgood, F. Woodward, G. Harrison, H. Smith, A. Wells, and W. Scotcher. The local organising secretary (Mr. A. Paul) was congratulated upon the financial success of the concert.

THE death has occurred at Waterford, at an advanced age, of Mrs. Annie O'Mahoney, proprietress of the *Waterford Star*. Deceased was the widow of the late Mr. John O'Mahoney, who started the *Star* over 20 years ago, at the time of the Parnellite split.

AT THE Mansion House Police Court on Friday, before the Lord Mayor, Benjamin G. C. Sawyer, a clerk, was charged with embezzling £1,087 3s. 7d., belonging to the St. Bride's Press, Ltd., of Bride-lane, E.C. The defendant pleaded guilty, and was sentenced to six months' imprisonment, with hard labour.

THE Printed Book: Its History and Development to the Present Day," by Robert Alexander Peddie, author of "Conspectus Incunabulorum," "National Bibliographies," "The British Museum Reading Room," etc., will shortly be published, with over 100 illustrations, by Messrs. Cassell and Co., Ltd.

WE may again remind our readers that the annual Bohemian concert of the Machine Rulers', Bookbinders, Printers and Kindred Trades Overseers' Association will take place on Saturday, 15th inst., in the Salisbury Hotel, Salisbury - square, Fleet - street, E.C. Particulars and tickets may be had from the Secretary, Mr. Geo. A. Eden, 9, Murillo-road, Lee, S.E. The annual dinner of the Association will be held at the same place on Saturday, April 19th.

THE 74th annual meeting of the Newsvendors' Benevolent Provident Institution was held at the Memorial Hall, Farringdon-street, E.C., last week, when a new rule was passed establishing pensions for one man and one woman not exceeding £25 and £20 per annum respectively in perpetual memory of Charles Dickens, who "by his influence and exertions as President of this Society, from 1854 to 1870, raised the Newsvendors' Institution from obscurity to a large sphere of useful philanthropy." The Hon. Harry Lawson, M.P., who presided, said relief and pensions to the amount of £1,712 had been paid during 1912 out of a funded income of £2,898. The institution had not become an Approved Society under the Insurance Act.

THE London County Council has under consideration proposals for the establishment at the L.C.C. School of Photo-Engraving and Lithography, at Easter next, of a day trade school for boys. In the event of the scheme being approved, the Council will award annually six scholarships tenable at the school; the scholarships, which will be awarded in accordance with the trade scholarships regulations, will be open to boys who are less than 14 and not less than 13 years of age on March 31st in the year of award (July 31st in 1913 only), and will consist of free tuition for two years as from Easter, with maintenance grants of £6 for the first year and £15 for the second year (£6 and £10 for the awards to be made in 1913 only).

TENDERS WANTED.—By the Deal Town Council for printing for one year from March 25th. Particulars from the Town Clerk's Office, High-street, Deal. By the Newcastle-upon-Tyne Tramways Committee, for the supply of tickets and the rights of advertising thereon. Forms of tender from Mr. M. E. Hatton, Tramway Offices, Manors, Newcastle-on-Tyne. By the Bucks County Education Committee, for printing articles specified in schedule for one, two, or three years from March 31st. Copies of specification can be had from Mr. C. G. Watkins, Education Office, Aylesbury. By the Corporation of Darwen, for the supply of account books, stationery, and printed forms for three years ending March 1916. Particulars from Mr. W. P. Halliwell, town clerk, Darwen. For printing for the Barry Urban District Council. Specifications may be obtained from Mr. T. B. Tordoff, clerk, Council Offices, Barry. By the Guardians of the Poor for the City of London Union for the supply of printing and stationery. Forms of tender from Mr. E. R. Woodward, 61, Bartholomew-close, E.C. For the supply of school books, stationery, account books, printing, etc., Hanwell Schools, Particulars from Mr. Geo. P. Morrell, The Schools, Hanwell, W. For the supply of printing, books, stationery, etc., for the Paddington Borough Council. Forms of tender from Town Hall, Paddington, W.

MESSRS. RAPHAEL TUCK AND SONS, LTD.' have issued a new series of picture post cards conspicuous for their artistic taste, skilful workmanship and high-class finish throughout. They include views of "Modern Athens —Edinburgh," reproduced in the Oilette process from original paintings; "Country Idylls"; beautiful flower studies; "Life in Chickendom," a humorous set; "Beside the Seaside," appealing especially to the local retailer in seaside towns; some charmingly reproduced ladies' head studies; "The 'Constable' Country," a highly artistic series of views depicting scenes immediately connected with work of this famous artist, reproduced in monotint with a deckled edge finish, and a "Real Photograph" post card of H.M.S. "New Zealand," the battle cruiser which was presented to the British Navy by the people of New Zealand, and recently inspected by the King.

MESSRS. LECLERCQ AND CHARERAT, 15-16 Cullum-street, E.C., are pushing a transparent material, under the name of "Cellophane," that is intended for use in the stationery and printing trades as a substitute for gelatine for window envelopes, and for varnish for show-cards, while it has many other uses that render it a desirable material. Extremely thin and clear as glass, "Cellophane" is unexplosive, insoluble in water, and air, grease and odour proof, and it can be dyed, printed, grained, embossed and cut out without difficulty. A thin film of the material is an excellent substitute for varnish, and is also useful for the covering of fancy boxes. For Christmas and other decorative cards it should be found useful. Those interested should apply to the firm for samples and prices.

The L.S.C. Jobbing Guild.

There was a fine gathering of members on February 13th at headquarters to participate in Competition No. 18—which was to design from wording supplied a page advertisement for the Swan Fountpen. The Competition was judged by Mr. Jas. Dyer and Mr. C. Whitehead, and three prizes were put up for the best arrangements. The results were as follows:—

1st—"Tano," Mr. H. Goffee; prize, a Swan Fountpen, valued at one guinea, presented by Messrs. Mabie, Todd and Co.
2nd—"Dunit," Mr. L. Lomas; prize, two technical handbooks, presented by the *Printers' Register*.
3rd—"Stat," Mr. A. C. Hayward; prize, value 5s., presented by Mr. C. J. Gray.

The competition was judged and results made known the same evening.

Mr. E. G. Strong then read a short paper on "Squaring-up in Display work," illustrated by sketches and actual jobs; but owing to the lateness of the hour it was decided to re-introduce the subject at the next Guild meeting on Thursday, March 13th, at 7-9, St. Bride-street, when it will be taken up by Mr. E. G. Strong, Mr. A. C. Hayward and Mr. F. Harvey—the subject then being thrown open to the meeting for general discussion. Members are invited to bring up proofs or copies of actual work (affected by the subject) for criticism, for the general benefit of the meeting. A cordial invitation is extended to all interested in the subject.

The Falkirk Herald.

In a recent issue we announced the installation of a three-roll press in the offices of the *Falkirk Herald*, and since then there has been a noticeable improvement in the appearance of that paper, and the other journals issued from the office, and the proprietors hope that shortly there will be no paper in Scotland that will be better printed. In looking over recent copies of these papers, the *Falkirk Herald* Saturday issue (10-pp.), *Linlithgowshire Gazette* (8-pp.), and the Wednesday issue of the *Herald* (6-pp.), all of which are printed on the new press, we find that they are well printed and have a look of prosperity about them. The *Falkirk Herald* claims to be the largest country paper in Scotland, and its advertising features include a phenomenally large number of births, marriages, deaths, etc., on front page, and a large number of small advertisements, including "lost and found," "situations," "articles for sale," "houses to let," "live stock," etc. There is also a considerable amount of space occupied by local shopkeepers and other advertisements, and the total amount of advertisements in the issue under notice is 28 columns. We understand that the paper rigidly adheres to

After all Permink is the only genuine Pen Carbon Paper which gives Universal Satisfaction!!
All wise Stationers Stock it
THE DEBECEY W. & M. CO.,
22, COLEMAN STREET, LONDON, E.C.

Digitized by Google

scale, which shows extremely good prices. On the literary side there are six columns of leading matter, including leaders, leaderettes and jottings of the week. "Gleanings from the past" is a popular feature recently started, with extracts beginning with the first issue of the *Falkirk Herald* published in August, 1845, and the amount of local news paragraphs is very extensive, as well as a large collection of news from surrounding country districts, in which the *Falkirk Herald* circulates. The paper caters well for its district, and is remarkably popular. "Lang may its lum reek."

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

And now back to that Costing Congress, and that dear, doubly dear, customer, that man who "leaves so little to be desired!"

o o o

The point of interest now is, "What will be the attitude of the journeymen? They have already, even since the Congress, given the matter of the proposed system forms their grave consideration.

o o o

This is pre-eminently a time for that fine courtesy so well defined as a sensitive regard for the self-respect of others.

o o o

Now, I am going to express courteously my own view; to express it with the most absolute reservation of right to express any somewhat different conclusion on fuller information or on thinking more closely of the matter. I have something of a misgiving, a doubt as to whether I've thought out the matter sufficiently. But as far as I've got these are my conclusions as a man who is with the worker—and with the worker's children—all the time.

o o o

I think the journeymen should do not simply *what they must*—I think they should do *all they can* to let the Costing System have a chance of giving an uplift to the whole trade.

o o o

I'm well aware that there may be abuse of any fresh information obtained by a firm through this system.

o o o

There's a real risk of that. I would take that risk. I think the unions are strong enough to deal with anything like duress should it be manifest. They have won their 50 hours in London and 51 in the country; won these at great cost to London (which has paid for all), but they have won. I think that on any real abuse arising they would win again. I do not think a contest with them would be lightly challenged.

o o o

I quite understand aversion to personal standards up to which all the men are, if possible, to be graded; and particularly an aversion towards facilitating the creation of those standards. I quite understand that filling in dockets hitherto not required may take on the aspect of "making a rod for one's own back." I quite understand the traditional view point of the journeyman that it is his business to fulfil a certain contract to work so many hours for so much money, and that it is the business of the employer to see and record what is being done in that time.

o o o

Perhaps I may reinforce my claim to understand these things fairly well by citing some past experiences. First, I might say that there were days not so long ago when men working as a companionship divided out duties among each other, and as far as possible according to individual capacities.

o o o

There were days not so long ago when piece was a more widespread practice. The modern trend has been towards "stab." It is natural enough that there should be a very careful scrutiny of anything which looks like grafting piece conditions on to stab conditions.

I remember that Judge Hughes, Q.C., of "Tom Brown at Rugby," arbitrated regarding the then claimed right of employers in two large printing houses in London to call on their men to write certain bills. He decided against the practice, and expressed his view that it was against the interests of the trade that the practice should be extended. He however said that the usage of the men or some men in the particular houses had constituted in their cases precedents which he could not disregard; and he ordered that in those two houses the bill-writing should continue. I am speaking from best recollection.

o o o

All these things are proper to bear in mind—and many others, too many others unhappily, which may justify that suspicion in the minds of employees which Mr. Blaikie recognised in his Congress speech as unquestionably present; and which he deplored. These things are facts.

o o o

But they are not the only facts.

o o o

It is also a fact that the millennium, or call it if you like Utypia, is not with us at the moment. It is a fact that organised labour of the country (or if you think I should express it differently, that the organised community) is not yet prepared, and is not likely for many a day to be prepared, to take over the charge and the running of the country's printing plants. It is a fact that even the pooling of printing profits desiderated by Mr. Reynolds in his speech in the Congress is far, very far distant.

o o o

It is a fact meantime that employed labour cannot long be paid a living wage by an employer unless the employer gets enough for the purpose from that public by which he also is employed. Ii is a fact that he is unlikely to get that adequate money from the public very long, unless he knows very accurately what he is doing, or what his workers are doing; and what all his operations are costing him.

o o o

It is a fact that few employers do know this. Once as a servant I instituted dockets in a firm in the printing world where none existed before; most certainly without the least duress resulting to a single man; and with much illumination for the heads of the concern. Three times I personally had to vary my figure of oncost percentage to recover my overhead charges. Before the docketing I *did not know* what they were.

o o o

It is, in general, a fact that when an employer pays a penny in wages, he has to pay a farthing to look after the penny. And this not in the least because of dishonesty or ca' canny practices, but by the nature and necessity of things. In other words the productive wage is only one of the things he pays; and must pay in order to be running a wage-paying business. This is a thing we all know, but are all apt to forget.

o o o

I think another thing is a fact—that it is of the highest importance that journeymen should themselves have all possible contact with the actual organisation of business. Many of them know much more of political economy than their employers, by my observation. They are not less capable than their employers, as a body (I am not speaking of the "learning of your schools, your Latin names for horns and shools?" I am speaking of mother wit and native power). What journeymen lack is that for which their occupation in ordinary gives them little or no opportunity, namely contact with the administrative details of bnsiness; contact with affairs. The dockets will help towards this some little.

o o o

So to conclude, I hope there will not be trouble regarding the provision of "System" docket information.

o o o

The masters have an opportunity now to make a very much worthier showing than that of two years ago, when I think they were gravely in error. They are now out in quest of the fact.

o o o

To Fact add Tact. Both of you do this, masters and men. And once more let me impress that the Golden Rule is not simply a great ethic; it is fundamental common sense.

FRANK COLEBROOK.

The late Mr. John H. Perks, who was largely interested in George Outram and Co., Ltd., printers and publishers of the *Glasgow Herald*, has left estate of the gross value of £52,149, of which the net personalty has been sworn at £50,394.

SPECIAL PREPAID ADVERTISEMENTS.

The L.S.C. Report.

THE annual report of the London Society of Compositors is usually an interesting document, and that for the year 1912, which has now been issued, shows that the receipts for the twelve months were nearly £69,000. Out of this sum there was an expenditure on unemployment benefit of £34,374, a heavy item that is explainable by the fact that at the opening of 1912 between 500 and 600 members were out of work. In this connection it is pointed out that although unemployment benefit has been paid without intermission, that this policy cannot be maintained out of the present revenue without serious loss to the Society. In spite, however, of this heavy expenditure the Society records an increase of nearly £3,000 in accumulated funds, which now stand at a little under £49,000. The membership has dropped from 12,050 to 11,804, the smallest total since 1906, when the membership stood at 11,563. This loss is attributed to abnormal shrinkage through death and emigration, lapsed memberships, and a falling off in the number of fresh applicants. The expenditure on emigration is another heavy item in the report, no fewer than 98 members of the Society having gone abroad at a cost of over £1,000. Naturally there has been a heavy drain in the matter of superannuation benefit, an item that affects all benefit societies as they become older. The amount expended for the year totals up to over £12,000, being an increase of over £900 on the previous year's expenditure. The report shows on the whole that the Society has made a wonderful recovery since the strike in 1911, which caused an abnormal drain on its funds, and shows that the executive must have worked hard to secure these successful results.

* * *

Customers' Furnishing Paper.

IT is becoming more and more common, when a contract for a printing job is given, for the customer to supply the paper, thus preventing the printer charging his legitimate profit on the stock. In many cases this is met to a certain extent by a small charge to the customer for handling his paper, but the custom is, and rightly, not received favourably in the trade. In the United States the same trouble has existed for some time, and the members of the New York Association have refused now to estimate on a job where the paper is supplied to them, and among the arguments brought forward in support of this action are the following:—The paper is part of the raw material of the job, for the success of which the printer is held responsible; and being held responsible, he should have a choice in the selection of the material. Because he is entitled to a profit on the paper used. Because he can buy in a better market than the customer. It is also added that the practice amounts to a want of confidence in the printer's knowledge, ability, and honesty, and is calculated to arouse ill-feeling between printer and customer. There is no doubt that the practice is an objectionable one and should meet with the opposition of the trade as a whole.

* * *

A Printing Office Breakdown.

THERE was an unfortunate breakdown, the other evening, at the offices of the *Darwen News*, when the driving power suddenly failed. The office possesses two gas engines, one of which is kept in reserve, and when the engine used for driving the printing machines gave out, this reserve one struck also, and could not be persuaded to start. The position was serious, and it looked as if for the first time the *News* would not make its appearance at the usual time. A visit was paid to the local electrical works, and the engineer there was appealed to for help. He proved a man of resource, and calculated speeds, arranged pulleys and straps and, by 2.30, the printing machines were running merrily. All the trains and trams were caught, and not a single newsagent had to wait for his supply. This incident shows the importance of thinking quickly, and grasping the opportunities at hand in an emergency. Electricity is a power that can be quickly installed wherever a current is available, and printers should keep this in mind when an engine breaks down at a critical moment. In the old days, as we call them, a couple of decades ago, its was customary to call in the aid of a steam road roller when a printer had a breakdown, and many a time this source of power had saved the situation. The roller was usually backed against a window or doorway of the printing office, and a driving belt taken to the printing machine. We believe a Middlesbrough printer was the first to thus utilise a road roller, but nowadays electricity offers a better service as prime mover.

POLITICAL rioting in Tokio, preceding the resignation of Prince Katzura, as Premier of Japan, caused the death of several persons, and partly wrecked the offices of the newspaper, *Kokumin Shimbun*. Crowds assembled around the building with the intention of burning it. The staff of the paper offered strenuous resistance with fire-arms, swords and knives. One of the rioters was killed by a bullet fired from the building. In a second attack on the plant bundles of straw soaked in oil were set on fire and thrown within the building. The fighting became desperate and the mob was driven away only after two persons were killed and more than a score wounded.

THE Institute of Journalists has been recognised by the Board of Trade as an "association" under section 106 of the National Insurance Act, 1911, and entitled as such to receive repayment of part of the amount paid to members during unemployment.

Digitized by Google

"The *Times* Printing Number" in book form has appeared, and presents, in convenient form, the collection of valuable articles and illustrations comprised in the special impression issued with the 40,000th number of the *Times* to celebrate that occasion. The number, it will be remembered, was devoted to the history of three things, printing, the British newspaper press, and the *Times*. Many flattering things have been said of the various articles, and only the other day Mr. R. A. Peddie, librarian of the St. Bride Foundation Typographical Library, incidentally referred in one of his recent lectures on the history of the arts of printing and bookmaking, to the excellence of the article in the *Times* Special Printing Number on "The Story of Printing," which he advised printers to read for the fullness of the information it contained on the subject. Neatly bound in maroon cloth with gilt title, demy quarto in size, it forms a handy and useful addition to the printer's library, and should be in the possession of every one that is in any way interested in the "Art Preservative."

THE BAXTER YEAR BOOK, 1912, by C. T. Courtney Lewis. 8vo., 117 pp. and 8 plates. Cloth. London: Sampson Low and Co., Ltd., 100, Southwark-street, S.E. 6s. net.

The progress of the Baxter-colour-print *cultus* proceeds apace, and in its modern form is almost entirely due to the painstaking energy of the author of this work, the third dealing with the subject that he has published within the last few years. It is intended that it shall form the first of a series of annual publications, each of which will detail the new discoveries of prints, or fresh facts in their history, their rising prices (it is quite evident that they *are* on the rise), as shown by auction sales, and, in general, such further information relating to Baxter process prints as shall have turned up within the previous twelve months. A very good start has been made in this first issue of the "Year Book," which contains a variety of details of interest to all conversant with the subject of which it treats. Amongst other things, there is a complete catalogue of all the Baxter prints known to have been issued, with their average present-day prices, some of which go up to £20 apiece, and in a few instances to very much more than this, it being stated that copies of the print of "The Launch of the Trafalgar" have been sold at £100 and £130! With the market in this condition, it is not surprising that the forger is "cutting in," and producing three-colour process reproductions of some of these prints, which should not, however, be capable of deceiving any but the most ignorant of collectors. Even these, however, can always obtain expert and gratuitous advice in cases of doubt—Mr. Lewis's own, in fact, that gentleman having lately added the avocation of Baxter print dealer to his former ones of collector and critic. Although opinions may—and do—differ as to the precise artistic value of the prints in question, great credit is due to Mr. Courtney Lewis for the way in which he has elucidated and illustrated a subject which, prior to his taking it in hand, presented a good deal of obscurity and difficulty.

An Example

of the many letters received every week from enthusiastic Linotype users.

Increased Work.

Speed in all Changes.

Standing Matter.

Avoids Overtime.

Anticipates Another Machine.

The Purchase Justified.

I am very pleased to say that since the installation of Linotype Model 4 Triplex Machine, the work has increased to such an extent that, without its many strong advantages, it could not have been undertaken. As it is, with the simplicity and quickness of change of body and measure, not to speak of the advantages of the Automatic Quadder, I have easily overcome the extra pressure. When I take into account that a large amount of the work at present in hand will have to stand for some time, and that this will be free from "pi," and not require any of the men picking various letters therefrom, it adds considerably to the value of the matter set. In fact, I don't know how I have done without the machine so long; but for it I would have been working overtime for weeks, whereas I have had no overtime at all. These facts give me every hope that, with the continuance of the present orders, I may ere long be compelled to consider the advisability of again placing an order with you for a machine similar to this with different body founts.

I should like to add that in every respect your points of recommendation in persuading me to purchase the machine have been fulfilled to the letter, whilst the courtesy and attention all through the transaction and afterwards have been most marked.

This is the experience of thousands of Linotype users. Linotype advantages are available to *every* Printer who permits himself to have them.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, March 5th, 1913.

DISPLACEMENTS of cash in Lombard-street last week end were of considerable magnitude, and the heavy disbursements put an end to the stringency, supplies having become more abundant and loan rates easier. The discount market also became easier in tendency. Stock markets on the whole have exhibited a more favourable tone, though the Home Railway market is disturbed. Consols are dull, the quotations being lower than a week ago, at 73 1/8 to 74 1/8 for money, and 74 3/8 to 74 5/8 for the April account.

A generally firm and cheerful tone has been maintained in the miscellaneous industrial market this week, though there has been no material expansion in the volume of business. In the section relating to paper and print movements have occurred both ways. Amalgamated Press Pref. have fallen 1/32 to 1 1/8; Linotype and Machinery A Deb. are down 1,58-63; Raphael Tuck and Sons Ord. have dropped 1/32 to 3/32—3/32, and Waterlow and Sons Def. Ord. have risen 1/2 to 25 1/2—27 1/2. Business has been done during the past week in Amalgamated Press Pref. at acc. 20s. 7 1/2d., 20s., 20s. 3d., and 20s. 9d.; in Cassell and Co. at 5 3/8 and 5 1/8; in *Country Life* Pref. at acc. 17s. 6d.; in Carl Hentschel Pref. at acc. 12s.; in International Linotype at 78; in Linotype and Machinery A Deb. at acc. 59 and 61; in Edward Lloyd Pref. at acc. 22s 6d.; in George Newnes Pref. at 15s. 3d. and 15s.; in C. Arthur Pearson Pref. at acc. 7 1s. 3d.; in Raphael Tuck and Sons Ord. at acc. 17s. 3d., and in the Pref. at acc. 5 1/8; in Waterlow and Sons Def. Ord. at 27; in Weldons Ord. at 32s. 6d., 31s. 10 1/2d., 31s. 3d., and 32s. 6d., and in the Pref. at 19s. 3d., 19s. 4 1/2d., 20s., 19s. 9d, 19s. 4 1/2d., and 19s. 6d.; and in Wyman and Sons Pref. at 15s. 3d.

DIVIDENDS AND REPORTS.

A. B. FLEMING.—The directors propose to realise a portion of the investments and to repay the whole of the preference capital at the price of £5 5s. per share. It is proposed to make the repayment on April 30th, and to pay to the preference shareholders, in addition to the balance dividend for the current year to April 30th, interest at the rate of 5 per cent. for the half-year ending October 31st, 1913.

STANDARD NEWSPAPERS.—The directors of the Standard Newspapers, Ltd., have considered it advisable to postpone temporarily the payment of the present dividend on the preference shares. It is hoped, however, in view of the improvement in the working of the business, that it may not be long before the warrants are dispatched.

NEW COMPANIES.

LONDON MAIL, LTD.—Registered with a capital of £100,000, in 10s. shares, to acquire the business carried on at 149, Fleet-street, E.C., and elsewhere by the Lonmail Syndicate, Ltd., as proprietors and publishers of the *London Mail*, and all or any of the assets and liabilities of the said syndicate in connection therewith, and to adopt agreements (1) with the said syndicate and (2) with A. M. Mandeville. The signatories are:—A. M. Mandeville, F. W. Jankesty, W. H. Hillman, A. Montin, W. Southern, T. H. Everatt and J. H. E. Hayes. Minimum cash subscription, £7. The first directors (to number not less than three no more than five) are A. M. Mandeville (permanent), W. Grant, 14, Waterloo-place, S.W., and E. Chapman, 4, Bedford-chambers, Covent-garden, W.C.

COMPANY NOTICES.

PROGRESSIVE NEWSPAPERS, Ltd.

Notice is given, that a meeting of the shareholders will be held at 5, Essex-court, E.C., on March 31st, to receive the liquidator's report.

COMMERCIAL INTELLIGENCE.

THE SWIFT PRESS, Ltd.
Liquidation Proceedings.

The creditors and shareholders of this company met on February 26th, before Mr. W. J. Warley, official receiver, at the Board of Trade Offices, Carey-street, W.C., to elect a liquidator under a compulsory winding-up order made last November on the petition of creditors. The chairman reported that he had received claims to the extent of £790, although in the statement of affairs the liabilities were returned at only £13 5s. 4d., and it would be the duty of the liquidator to deal with the proofs of debt for dividend purposes. There appeared to be a liability on certain shares held by Mr. R. J. Walker, and if that liability were to be established there would be more than sufficient assets to pay the whole of the liabilities. The company was registered on September 30th, 1912, with a nominal capital of £40,000, divided into shares of £1 each, its objects being to carry on the business of publishers, newspaper proprietors, etc. The promoter of the company was Mr. Charles Granville. The directors, who were appointed by the signatories to the memorandum of association, were Mr. Charles Granville and Mr. R. J. Walker. The articles of association prescribed the holding of 10 shares of the company as the qualification of a director, and the remuneration of the board at £150 per annum for the chairman, £100 per annum for each of the other directors, and 5 per cent. of the surplus profits of any year after a dividend of 10 per cent. had been paid. Agreements were entered into by Mr. A. F. Woodman as trustee for and on behalf of the company:—On September 9th, 1912, with Charles Granville for the acquisition of the *Onlooker* newspaper for a consideration of £8,000 in fully-paid shares. On September 9th, 1912, with Stephen Swift and Co., Ltd., and Charles Granville for the acquisition from Stephen Swift and Co., Ltd., of a number (not stated) of shares and 21 debentures of £50 each of the Eye Witness Co., Ltd., for a consideration of £4,750 in fully-paid shares, and from Granville of 700 shares of 1s. each of the Eye Witness Co., Ltd., for a consideration of £700 in fully-paid shares. On September 9th, 1912, with Stephen Swift and Co., Ltd., for the acquisition of a two-thirds interest in the *Oxford and Cambridge Review* for a consideration of £300 in fully-paid shares. On September 9th, 1912, with Charles Granville for the acquisition of a publication known as *Rythm* for a consideration of £300 in fully-paid shares. On September 17th, 1912, with R. J. Walker for the acquisition of a half interest in the *Oxford and Cambridge Review* for a consideration of £5,550 in fully-paid shares. On September 30th, 1912, a meeting of directors was held, at which Messrs. Granville and Walker were present. According to the minutes, Mr. Granville was appointed chairman and managing director, and a resolution was passed that the agreements before mentioned be adopted by the company. In pursuance thereof 19,650 shares were allotted as fully-paid to the respective vendors; and in addition 150 fully-paid shares were issued to Stephen Swift and Co., Ltd., in connection with the *Oxford and Cambridge Review*, the consideration for which

2 SALES BY AUCTION of PRINTING PLANT and MACHINERY by Mr. ROBERT H. RUDDOCK, Printers' Auctioneer and Valuer, 71, Fleet Street, London, E.C.

1.—LONDON, E.C.

Expiration of Lease.

8 and 9, Haynes Street, Long Lane, London, E.C.

Mr. ROBERT H. RUDDOCK

WILL SELL BY AUCTION, in Lots, on the premises, as above, on TUESDAY, 11TH MARCH, 1913, at 2 o'clock, BOOKBINDERS' PLANT AND MACHINERY, including:—Ten No. 1 Imperial Arming Presses; two No. 4 ditto; one No. 3 Self-Inking ditto; three Hydraulic Presses; two Starr Backing Presses; three Guillotines; two Millboard Cutters; Rolling Machine; Wire Stitchers; ten Laying Presses; Fixtures; Fittings; Office Furniture and Stock.

On view day prior, and Catalogues of the Auctioneer, 71, Fleet Street, London, E.C.

2.—HALIFAX.

Raglan Street, Halifax.

Mr. ROBERT H. RUDDOCK

IS favoured with instructions by the proprietors, who are relinquishing their manufacturing business, to SELL BY AUCTION, on the premises, as above, on TUESDAY, 18TH MARCH, 1913, at 1 o'clock (if not previously disposed of by Private Treaty), the EXTENSIVE PLANT AND MACHINERY of MESSRS. MILNER AND CO., together with the VALUABLE GOODWILL.

LETTERPRESS PLANT includes:—

New No. 6 Quad Crown "Babcock Standard" Press, by Babcock Printing Press Manufacturing Co.; Quad Crown Wharfedale Printing Machine, by W. Dawson and Sons; Quad Crown Wharfedale Printing Machine, by Payne; Double Crown Wharfedale Printing Machine, by W. Dawson and Sons; Crown Folio Anglo-American Arab Platen, by Wade; Royal and Post Folio Albion Proof Presses; Monotype Installation with "C" Keyboard, Caster with Low Quad Attachment; two Moulds and three Die Cases: 150 Cases Book and Jobbing Type; Ornaments; Borders, etc.; Chases; Galleys; Assortment of New Wood Letter; Surfaces; Racks; Frames, etc.

THE BINDING PLANT comprises:—

Three Double Demy Four-Fold Folding Machines, by R. Cundall and Sons; 42-in. Self-Clamp Guillotine Paper Cutting Machine; 18-in. Hand Guillotine; Book Thread Sewing Machine, by Aug. Brehmer; four Starr Backing Machines; five Nipping Presses; eight Screw Standing Presses; 20-in. Power Rolling Machine; Rotary Card Cutting Machine; 36-in. Millboard Cutter; Rotary Bevelling Machine; Card Cutter; No. 7 Reel Wire Stitcher; Self-Feed Treadle Eyelette., by British United Shoe Machinery Co.; Perforating Machine; three Copper Electric Glue Kettles.

GOLD BLOCKING PLANT includes:—

Powerful Self-Inking Gold Blocking and Embossing Press; a Gough's 12 by 10 Gold Blocking Press; five No. 2 Imperial Arming Presses; a Friedheim Gold Blocking Press; Brass Letters; Tools; Rolls, etc.; 18 Gilding Presses on iron stands.

STEREOTYPING PLANT comprises:—

Two Casting Boxes; two Hot Presses; Circular Saw Bench; three Shooting Boards and Planes; Metal Pots; Gauges, etc.; large quantity of Stereo Metal, etc.

FIXTURES, FITTINGS and OFFICE FURNITURE,

Two Weighing Machines; Mahogany Desks; Tables and Safes; two Typewriters; Racks, Benches, etc.

On view day prior, and Catalogues of the Auctioneer, 71, Fleet Street, London, E.C.

Digitized by Google

was unknown to the official receiver. At the same meeting 10 shares each were allotted for cash to Messrs. Granville and Walker, one each to the other five signatories to the memorandum of association, and 3,000 shares to Mr. Walker. With regard to the latter shares the minutes recorded that Mr. Granville stated that he had on behalf of the company received £3,000 from Mr. Walker, the said shares were directed to be issued as fully-paid. There did not appear to be any agreement relating to them, but Mr. Walker had stated that he paid £1,500 to Granville on account of them prior to the formation of the company and £1,500 further at the said meeting. The latter payment was made by cheque in favour of Mr. Granville, who disappeared immediately afterwards. On Mr. Granville's disappearance certain instructions were given by Mr. Walker for the continuance of the publication of the *Onlooker*, with a view to protecting such interest therein as the company might have, and he undertook to pay the claims of certain creditors, which he had stated he had done. No steps appeared to have been taken on behalf of the company in connection with the other periodicals mentioned. The official receiver, with the leave of the Court, disposed on November 6th, 1912, of the company's interest (if any) in the *Onlooker* for £100, the purchaser also agreeing to indemnify him, the special manager (Mr. Harry Wingfield) and the company against the costs and expenses of carrying on the business during the special managership. The Chairman added that he had tried to obtain from Mr. Granville an explanation of the state of things as regarded the *Onlooker*, as they were in great confusion, but that gentleman had declined to give any information at all with reference to that paper. He had given some information relating to the other papers, but the interest of the creditors and shareholders in them was very doubtful. The rights of all parties would have to be threshed out by the liquidator in the course of the winding-up proceedings. A resolution was passed for Mr. Harold P. Walters, C.A., 15, George-street, Mansion House, E.C., to act as liquidator, with the assistance of a committee of inspection consisting of Mr. Harry Wingfield (liquidator of Stephen Swift and Co., Ltd.), and representatives of W. H. Smith and Son, and of Mr. R. J. Walker.

Re EDGAR JAY, Loose-Leaf Ledgers.

A sitting of the London Bankruptcy Court was held the other day, before Mr. Registrar Hood, for the public examination of this debtor, formerly trading at Albion-buildings, Aldersgate-street, E.C., under the style of Edgar and Co. The statement of affairs showed total liabilities £7,478 12s. 9d. (unsecured, £3,368 19s. 9d.), and assets valued at £630. Questioned by Mr. W. G. Williams, official receiver, the debtor stated that in the early part of 1906 he, in conjunction with a relative, took premises at Dufferin-street, City-road, E.C., and carried on business as dealers in fancy goods. That venture was a failure, and he then commenced business in connection with a patent loose-leaf ledger under the style of Edgar and Co., at Albion-buildings. In January, 1910, he sold that concern to Edgar and Co., Ltd., formed with a nominal capital of £12,000. As vendor, witness received £1,025 preference and £7,250 ordinary shares in the company, and he was appointed managing director at a fee of £12, subsequently increased to £14 per week, which position he held until July, 1912, when a receiver was appointed on behalf of the debenture holders. The company went into voluntary liquidation in the following month. In August, 1911, witness started a school to teach shopkeepers and assistants proper business methods; owing to want of capital the business was not successful, and in June, 1912, he sold it to the National School of Salesmanship, Ltd., for £250 preference and £501 ordinary shares, which, about September, 1912, he sold for £100. Being unable to obtain the necessary capital with which to carry on the company he left it, and had since been employed as a traveller on commission. Witness attributed his insolvency to the failure of Edgar and Co., Ltd., and losses by guaranteeing the debts of that concern; also to loss in connection with the National School of Salesmanship, Ltd., and interest on borrowed money. The examination was adjourned for further investigation.

Re ARTHUR VIVIAN COATES.

A sitting for the public examination of this debtor, described under a creditor's petition as of 8, Salisbury-square, Fleet-street, E.C., was held recently, before Mr. Registrar Hope, at the London Bankruptcy Court. The debtor returns liabilities £273 19s. 3d., and assets "nil." Replying to Mr. E. Leadam Hough, senior official receiver, the debtor stated that for several years past he had been in the employment of his father's firm of printing ink manufacturers, but he now had no occupation. He had received a salary and commission out of the business, and he had earned further sums by way of commission on the sale of motor cars. Witness attributed his failure to excess of his personal expenditure over his income, to a loss of £80 through card playing, to interest charges (£72 10s.), and to law costs. The examination was concluded.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

THE BANKRUPTCY ACTS, 1883 AND 1890.

RECEIVING ORDER.

TUCKER, E. F. H., High-street, Titchfield, Hants., stationer and printer, etc. Date of order, February 22nd, made on the debtor's own petition. First meeting of creditors, March 13th, 3 p.m., at the official receiver's offices, Cambridge-junction, High-street, Portsmouth. Public examination of debtor, March 31st, 11 a.m., at the Court House, St. Thomas's-street, Portsmouth.

NOTICE OF DIVIDEND.

DEWHIRST, R., trading as R. Dewhirst and Sons, 63, Halifax-road and Herald-buildings, Todmorden, Yorks., printer and publisher, etc. Final dividend of 3s. 1d., April 8th, at the office of the trustee, 15, Church-street, Todmorden.

APPLICATION FOR DEBTOR'S DISCHARGE.

SMITH, E. B., Mayfield, Brighton-road, Croydon, printer. To be heard April 17th, at the County Court, Scarbrook-road, Croydon.

THE IDEAL PUBLICITY CO., LTD., Spencer House, South-place, Finsbury, London, E.C. First and final dividend of 2s. 6d., any day except Saturday, 11 till 2, at the official receiver's offices, 33, Carey-street, Lincoln's Inn, W.C.

The Printing Crafts Guild.

A Lecture on Advertising.

By Mr. T. Wright Oliver.

(Continued from issue of February 27th).

It is hardly advisable to dogmatise on the subject of advertisement display. Some advertisers swear by illustration—say that an advertisement is useless without one—others that an effective type display without illustration is preferable. Again one is all for borders, often elaborate, another holds that borders are an abomination, and will have all advertisements borderless. One can almost recognise the work of some agencies by the amount of type crammed into a given area, and again others are noted for the use of large blank spaces, and each and every method appears to be effective at times. The fact of the matter seems to be that it all depends on the article advertised, the class of reader, and the setting of the surrounding advertisements. An extensive margin of white space round an advertisement is excellent on a page which is crowded up with all styles and sizes of type, whereas if it occupies a solus position and only has editorial matter to compete with, it will probably be seen even when packed with matter.

(b) Having attracted favourable attention, the next step is to convert attention into interest. Our salesman has obtained his interview, and created a favourable impression by his appearance and opening words, and it is of vital importance that his next remarks shall confirm this impression and carry it a stage further. If the headline is right, it has selected from the many who noticed it, a number who have, at any rate, some slight inclination toward, or need for, the article advertised. These are all possible buyers, and need very careful handling, as it has probably cost a considerable sum to reach them.

Interest, however, never made a fortune for anyone. Nowadays there is a general tendency to be interested in things. People are interested in art, music, football, the drama, and so on. The man who has something to sell wants to sell it, and in order to do so he must create desire for it in the mind of the prospective customer, or in other words, convince him that he should have it.

(c) The desire to purchase an article is generally created by describing such features as will appeal to a person's five senses, or to his ambition, vanity, love of ease, or similar characteristics. At this point in the process, it is generally necessary to introduce a description of the points likely to interest the class of reader aimed at, such as purity, strength, reliability, efficiency, low price, or economy of working, and reasons why such qualities make the article desirable.

All successful selling talks must appeal either to the reason or the feelings of the reader, and in some cases, a combination of the two is effectual. While it is quite possible to use logical argument (in the non-controversial sense), especially when it can be followed up by demonstration, as in the case of a card index or a typesetting machine, where economies of time can be proved, in by far the largest proportion of cases, the appeal is made to the feelings.

Amongst the most powerful persuasive factors is direct or indirect suggestion. In the case of the former, this consists of a skilfully portrayed mental picture of a prospective buyer enjoying possession and use of the article, or the retailer building business and making profits from its sale. Indirect suggestion, on the other hand, consists of what some other person said of his enjoyment, or an account of his use of the article, and includes testimonials and, I regret to say, fake photo-

graphs of well-known beauties using the article.

I do not wish you to gather that I am decrying logic; on the contrary, the advertiser must have a very clear logical idea of what he is aiming at, and how he intends to achieve his aim. I do feel, however, that persuasion and suggestion are the two strong cards in the hands of the advertiser, in creating desire in the prospective customer, and will be effective in many cases where a closely-reasoned argument would leave him cold. The appeal, therefore, should be to the feelings rather than to the reason.

(d) Presuming now that we have written and arranged our advertisement perfectly, so far, we have created in the reader's mind a desire for the article, or service, and he is in the right mood to buy. It is only necessary, therefore, to do one thing more, and that is to induce him to take action. To the personal salesman this is not an easy matter, even though he has his order ready for signature, and is able to place a pen in the prospective customer's hand. In an advertisement where the stimulus has to be applied through the medium of cold type it is still more difficult. If the attention is to draw requests for a catalogue, a corner of the advertisement is often arranged so that it can be cut off, filled in, and enclosed in an envelope. In the case of card or stiff paper insets in magazines, the lower portion of the advertisement is sometimes arranged in the form of a post card, thus obviating the necessity of finding an envelope, and some advertisers indicate on the stamp space that if the card is posted without a stamp one penny will be paid on delivery. The whole point is, of course, to make action as easy as possible, as any difficulty in finding an envelope or a stamp might cause the action to be delayed, giving time for the reader's desire for the article to weaken.

We have now very briefly dealt with the general principles underlying the selection of media, and the preparation of copy. It is unnecessary, speaking to the present audience, to make more than a passing reference to the desirability of having illustrations prepared to suit the paper in which the advertisement is to appear, having regard to the quality of stock, and the speed of printing. Usually the printer has to put up with what the advertiser sends him, and unfortunately, for motives of economy, the same block is often used for catalogue work and press advertising. When a fine screen half-tone block is used in a newspaper, the result is necessarily disastrous, and the only true economy is to have either a line block or a coarse half-tone made (about fifty lines to the inch). If, however, it is to be used in catalogues and trade papers, a very workable compromise can be arrived at by making the block with either a 120 or 133-line screen, by means of which satisfactory results can be obtained in the catalogue, and quite passable effects in all but the very poorest trade papers.

On the subject of display, I speak with some trepidation. It is necessary that both printers and advertising men approach the subject with an open mind. It is essential that the man responsible for getting results from the advertisements shall have the final say on all matters connected with them, and I think it is advisable that he should indicate a general lay-out for the printer. If the compositor considers that this can be improved it should be quite open to him to submit a setting on his own lines, and if he is used to the class of work, this co-partnership principle will nearly always be productive of the most satisfactory results. Undoubtedly the best arrangement for a firm doing extensive advertising is to employ their own compositors, and have all advertisements stereotyped; this course is also followed by many of the large agencies, thus ensuring a continuity of style, which is a very valuable asset in identifying the product, or firm, with the dignity and taste shown in the advertisements. Where the amount of work is not large enough to warrant the employment of a compositor, much can be done by entrusting it to a jobbing printer who has suitable founts of type, and having it always set by the same man if possible. If, however, financial reasons make such a course impossible, it is advisable to send "copy" to the paper in good time, and if necessary, have several revises, by this means eliminating the more offensive features. If "copy" is sent at the last moment, it will be set up in the style (or lack of style) of the paper.

The use of a standard border, special name plate, trade mark, or symbolic design, is often adopted to connect the advertisements in the mind of the reader, but in the case of the last-named, it is always advisable to make absolutely sure that it is not an infringement of another firm's trade mark, as the rightful owners are sure to notice it eventually, and at the best, will demand its suppression in all future advertisements, thus sacrificing the money spent in popularising it.

In this connection, it is perhaps advisable to refer to the cumulative or snowball effect of advertising, and I will quote from a little book on the subject, by Mr. Howard Bridgewater, who is very emphatic in his condemnation of spasmodic or "splash" advertising. "The thing goes on like a snowball: The first insertion may interest 1,000 and bring in ten buyers; the second may turn 50 of the initial thousand interested into actual buyers, and at the same time interest a further thousand. The third insertion may produce a further 100 buyers from the first thousand interested and 75 from the second. Thus the total number of buyers on this computation resulting from the third insertion would be 235 as against 10 from the first. I do not think my figures in the least exaggerate the importance of cumulative value. Indeed, from actual experience which I could quote, I know that they do not.

The psychological effect of repetition is shown in one of its strongest forms in the fact that a man may repeat a lie so often as to believe it eventually to be the truth. In the opinion of one of the largest firms of advertisers in this country, the value of consistent advertising persists for a period of five years—and this estimate is regarded as conservative by the *Advertising World*, to which admirable monthly, Mr. Paul E. Derrick—the well-known advertising expert—contributed an article from which I take the following:—Advertising is in exactly the same class of investment and subject to the same process of cancellation by yearly discounts as are other items of inventory. A business-like method of handling this vexed question is that of a large, conservative, and persistent advertiser whose practice it is to treat advertising as he does works extensions.

I have already tried to show that advertising cannot be conducted on a haphazard principle if the best results are to be obtained. There are three things that every advertiser must do.

Firstly, he must thoroughly understand what he is advertising, and the most effective method of doing this is by analysis. Wherever possible, every detail of the raw material, process of manufacture, utility, and method of selling the article should be studied, and in order to ensure thoroughness, it is advisable to write down in black and white, and only by this method can the selling points be selected and incorporated in the advertisement with absolute certainty.

Secondly, he must check results. Most firms and all limited companies have a balance-sheet prepared at least once a year, and it is just as important, though unfortunately may firms do not realise it, that a similar check should be exercised on advertising. One way of doing this is by keying the advertisements, that is, by so arranging that it is possible to tell from which advertisement an enquiry or order is received. Various methods are adopted, chief amongst which is a coupon containing a distinctive number or letter; a request to write to department "P" or some other letter; and offering a catalogue by an indicator number. In one case the works of an advertiser are in a street containing only three numbers, and he keys by giving a different street number for each advertisement, and others vary the spelling or arrangement of the firm's name. Keying is no guide to the cumulative effect of advertising, but it is helpful as showing—not how many enquiries are received—but how much business is obtained from each publication.

Thirdly, he must realise that it is only by consistant hard work and hard thinking that he will make a success of his advertising. Sometimes no doubt a lucky fluke will bring the orders rolling in, but it is a moral certainty that luck has no more to do with success in this sphere than it has in building a battleship—both are the result of a scientific use of the experience of those who have gone before, adapted and extended to meet modern needs and requirements.

DISCUSSION.

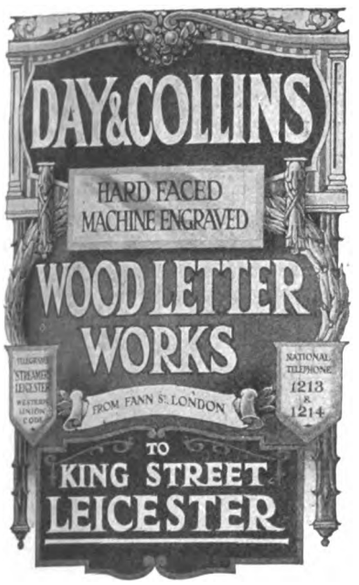
The PRESIDENT said the lecture had been most interesting and Mr. Oliver had handled his subject in an instructive manner. As to the exact returns from advertisements in different papers he thought it would be difficult to obtain them. Had the lecturer gone more into the side of printing he might have created greater discussion because the majority of the members present were in the craft. Recently he had been compelled to note the force of advertising. At the recent Business Exhibition he casually mentioned to the representatives of a certain firm of typewriter manufacturers that he possessed one, but it was not of their make. The exhibiting firm had so persistently followed up the admission that he was inclined to believe his own machine was wrong and their's right. The half-dozen letters or so that had been received were well typewritten and the wording so concise and to the point that the firm may eventually receive an order. A good many firms use crude advertising designs which are objectionable to the cultured class, but if the form of the announcements appealed to the particular class for whom they were intended they might capture that portion of the public.

Mr. LINTON (Bolton) remarked that some 15 or 16 years ago he followed one of these schools which advertised £5 per week after so many lessons, and he believed he would at the present day have been in a far better financial position if he had followed the duties laid down to the end. He suggested that the lecture be followed up with a series of drawings, because the young printer might educate himself and in after life would not regret the time spent developing his mind on advertising.

Mr. RICHARD BATES said it was a pleasing sign of the times when advertising experts admitted that it very often proved advantageous to consult the compositor. Sometimes the compositor appreciated the taste and judgment of the advertising specialist. With reference to display pages he greatly admired the pages of the *Shoe and Leather Record*, both on the advertising and the literary sides, and they would take a lot of beating. Mr. Oliver had stated that three to five words were the most effective for an advertisement, but he believed in one word, and mentioned several examples.

Mr. OLIVER, in replying, said he hoped his remarks had given those present some idea of the lines upon which they might work, and as printing was their chief bent, all things being equal, he did not see why they should not obtain good positions in the advertising world. It was no use a youth of indifferent education and no knowledge of drawing spending several pounds on some fourteen lessons and expecting at the end of that period to be able to earn £5 per week. Advertising should be constructive, and should not decry competitive goods, as this always had a tendency to create doubts in the prospective customer's mind. It should always be positive not negative, because its chief object was to tell in the best and most efficient manner why the commodity offered to the public was the best.

The CHAIRMAN (Mr. Charles D. Penwarden) held that ideas were the root of all successful advertising, and gave a considerable number of interesting examples to bear this out. He very strongly deprecated the idea of luck being a factor for consideration, and held that almost all business bringing schemes were the result of combined experience and hard work. Nowaday most firms were willing to spend money on advertising if there was a reasonable prospect of a proportional return in increased business, and it was on this basis and this alone that it was now judged. The huge advertising appropriations of some firms which had started in quite a small way was proof, if any were needed, that properly handled advertising does pay. He referred to the value of a practical printing experience to an advertising man, and speaking of the assistance it had been to himself, counselled those of the audience who had inclinations towards publicity work to "go and do likewise."



WEE MACGREEGOR.

AN interesting lecture was given the other evening in the Library Theatre, Burnley, by Mr. R. Ashton, on "The Story of the Printed Book." Mr. N. Jepson, who presided, said he did not think we had made very great strides in the printing of books, for some of the earliest printed books to be seen in the British Museum were quite equal to anything that was produced to-day. In earliest times books were produced as works of art; to-day it was a matter of commercialism, and the question seemed to be "How cheap and quickly can we produce books?" With the aid of lantern slides Mr. Ashton traced the evolution of printing up to modern times, dealing with the works and methods of the famous printers of all nations, and the various kinds of type adopted by them. The history of Caxton was carefully traced out, the story of how he came to adopt the art which made him famous being specially interesting.

ACCORDING to *Kemp's Mercantile Gazette* there were three failures in the printing and stationery trades of England and Wales for the week ending Friday, February 21st; the corresponding week in 1912 showed none.

The Ghent Exhibition.

Preparing for the Visitors.

To build a hotel to hold a thousand guests on purpose to prepare for the rush of visitors to the Ghent International Exhibition, and then to pull half of it down again when the Exhibition closes is one of the many striking pieces of enterprise which the municipal authorities of the town have undertaken. The hotel is in no way a temporary structure but brick-built throughout, and the remaining half will continue under the management of the town as a station hotel at the new railway station on the main line from Ostend to Brussels. This station, the Gare St. Pierre, may almost be described as an Exhibition enterprise, too, for it is just on the edge of the grounds, and the work has been specially put forward so that it may be ready for the exhibition traffic.

There is a general belief that directly an international exhibition is opened in a town hotel prices jump to famine rates, and that visitors have to pay most exorbitant sums for the bare necessaries of life. This may have been true at one time, but it is not so to-day, for it is greatly to the interest of the exhibition authorities to see that prices are kept as low as possible, and the lengths to which the Ghent Exhibition authorities have gone in building this special hotel, to provide rooms at a fixed and reasonable price for visitors, are typical of this modern spirit.

But apart from the erection of this hotel a "Bureau de Logement" has been formed to inspect and classify all the private apartments available. The price of these, 3 frs., 5 frs., 8 frs., 10 frs., or 15 frs. for the night and breakfast, is also fixed by the Bureau, so it is obvious that the keepers of hotels and boarding-houses will not be able to raise their charges to famine rates in the face of this competition.

This Bureau, which is not a business concern and has no financial interest in the work, will have offices at both the railway stations and at the Exhibition, and on applying there visitors will be given the addresses of vacant rooms at the price selected. As these will all have been inspected and priced by the Committee there will be little trouble in finding suitable accommodation.

In order to provide for the visit to the Exhibition of large parties from Workmen's Clubs and Institutes, the Bureau has also hired a number of large halls, and is fitting them up, with the assistance of the military authorities, as dormatories, where as many as 100 or 150 men can be lodged at a time. The charge for these darmatories will only be sufficient to cover the expenses, but arrangements will have to be made beforehand with the "Bureau de Logement."

Yet another fact which will prevent any great rise in prices in Ghent is the nearness of Brussels, Bruges and Ostend. Bruges can be reached from Ghent by train in 35 minutes, Brussels in 50 minutes and Ostend in 60 minutes, journeys which are of no greater inconvenience than those taken by many suburban dwellers every morning.

THE Cost System and the Lithographer.

The comparatively recent discussions on cost and efficiency have developed almost to the extent of evolution—and yet there is evidently a desire for more. Every man almost without exception, in the lithographic business has lined up on the side of the advocates of the cost system, and the business offices of the lithographic establishments of the country are all, more or less, filled with various instruments with which experts assure us we can determine the exact cost of production.

Just as soon as the lithographer ascertains beyond a doubt just what each piece of work that goes through his shop costs him, and just what each piece of machinery is capable of earning when properly operated, then will ring out the knell of the flat-bed press.

No man in these days of progress can keep up with the procession equipped with antiquated machinery. The offset press has demonstrated and is demonstrating every day that better work can be done, and a much larger quantity turned out, by the offset process than can possibly be done by the stone press. Yet there seems to be a doubt in the minds of some people, and nothing can dispel this doubt, evidently, but a home-made demonstration. The cost system will make this demonstration. The sooner a lithographer adopts the cost system, and finds out just what machine is making money for him and which one is losing money, the sooner the universal adoption of the offset process will come about. In the interest of the whole trade we welcome the change. It will spell prosperity for the lithographer.—*Harris Monthly.*

During last year the Labour Exchanges of the Board of Trade received 27,526 applications for employment in the printing, stationery, book and paper trades, of which 11,599 were from women. On the other hand, only 9,951 vacant situations in those trades were notified to the Exchanges during the year, of which the majority (5,955) were for women. The number of vacancies actually filled by the Exchanges during 1912 in the trades referred to was 7,437—of which 654 were only temporary—and 4,682 of them were taken by women. In the Juvenile Branch 8,897 vacancies were notified, of which 5,647 were for girls and 6,762 situations were filled, including 4,601 by girls.

Printers' Managers and Overseers ASSOCIATION.

NORTH MIDLANDS CENTRE.

A Lecture on "India and its Languages."

At the February monthly meeting of the above Centre, after the usual business was transacted, Mr. C. A. Wood, of Messrs. W. Miles and Co., Nottingham, gave an interesting and instructive lecture entitled "India and its Languages." Mr. Wood treated his subject in a conversational manner, profusely illustrated with anecdotes which kept the company in good humour. He gave many interesting details of his travels in India, including the habits and customs of the people with whom he came in contact, and his lecture was illustrated by specimens of type in use in India, which assisted to convey some idea of the difficulties that have to be surmounted in the preparation of vernacular type. Mr. Wood's lecture was much enjoyed by the members present, who accorded him a most hearty vote of thanks at the close.

Mr. WOOD said: During my visit to India in 1909 and 1910 I was surprised at the various dialects spoken; every city seemed to have a variety of dialects, and yet the characters were in many instances obtained from the same script, the Nagari. At Bombay, where I landed, Hindi is spoken. This character would also cover Sanscrit, Nepali, Mundari, and a number of minor Indian dialects. Marathi is also spoken, and the Gujarati language is extensively used among the population of 770,843 inhabitants.

I was soon at home for I had hardly set foot on *terra firma* before I was welcomed by old friends from home, and driven to an hotel which certainly seemed to contain none but British visitors. The city is certainly up-to-date with its electric trams and beautiful buildings, but the buildings that interested me most were its presses and all that appertained to typography. My letter of introduction to the Government Press was soon in evidence, and by the kind courtesy of the superintendent of the Bombay Government Printing depot, I was shown work in letterpress equal to any at home. Some of the books were thorough specimens of printing and binding, although produced under adverse circumstances when we consider the difficulties experienced in training native labour, and the troubles connected with inks, etc., on account of the extreme heat. I remarked what a hive of industry it seemed, but was told later on that the white man could always do in one day what a native takes four days to do. We must, however, take into consideration the different rate of pay. This press has its own type foundry, and its productions were certainly equal to a lot of the work produced by some of the foundries in Great Britain or elsewhere. Most prominent seemed the order maintained and cleanliness of the machine and case departments. The printers in Bombay can almost boast of having one of the finest buildings in that city—the *Times of India* offices—also noted for its variety of work—general printing, bookbinding and process work. This firm, besides making its own type, has a number of linotypes, and in walking through its immense machine-room one can see all the well known names of home manufacturers in evidence. Besides printing in the roman character, an enormous quantity of vernacular matter is produced. I visited a number of native presses, and I am often asked how I got on, not knowing the language. I found no difficulty whatever in the whole of my journey to Lahore, Allahabad, Calcutta, *via* Central India, to Bombay. Every educated native seemed to speak our tongue. I must speak of the kind manner in which some of my Indian clients treated me. On arrival at the hotel in Bombay, as soon as it was known where I stayed, a beautiful basket of Indian sweatmeats and fruits, with a welcome to India, was sent to me. On visiting these gentlemen I was driven out to the foundry in the suburbs of Bombay, and was treated with the usual Indian welcome of having flowers presented to me and garlands of roses hanging around my neck, entertwined with tinsel, and scent was sprayed into the carriage, while the native employees collected to give a hearty send off. During my look around this foundry I saw a native working at punch cutting. He was seated upon the ground, and appeared to have but a few files. Considering the difficulties this workman seemed to be working under, he was producing some very good punches of Telegu, and the price per punch was about one rupee (1s. 4d.).

This firm is certainly striving to improve the art and manufacture of type in India. Its metal was alloyed upon the premises, and its productions have during the last 20 years been on the upward grade of quality. All its machines are British manufacture, and it casts a lot of Latin, besides vernacular type. Quite a large number of native printers spoke of the Type Foundry and its productions.

Bombay has about 42 newspapers, journals, etc., printed in English, 10 printed in English and Gujarati, Marathi and Urdu.

From Bombay *via* Thansi to Gwalior is a distance of 763 miles. The languages spoken are Malwi, Bundari, Hindi, Urdu, Marathi Gwaliori and Marwari. It is a native State in political relationship with the Government of India and under the Presidency of His Highness the Maharaja of Scindia, whose name is so well known in connection with our Coronation festival.

In the centre of the city is a large square surrounded by large buildings, not the least being the Printing Press. Everything in this new Press is British, and some of the leading Otley firms are well represented. This Press has its own typefoundry and electro and stereo foundry, and at the time of my visit was not quite ready for running.

The Marathi here spoken, although the same in character, is slightly different from that used in Bombay, being Balboda. In going from the old Press to the new was indeed a transition from the ancient to the modern. Nearly all I met, who were in authority at all, could speak English, and in visiting Morar, where the Great Fair was in progress, there was no difficulty in finding anyone but what could speak a little English.

In Agra, which no Britisher could well miss visiting—for to see the Great Tag Mahal is the sight of a life-time—the languages spoken are Brij Bhasha and Urdu in the city, and in other parts a form of Kharboli interspersed with Brij expressions.

Lahore, which has a population of about one-and-a-quarter million, has only two dialects principally spoken, Urdu and Punjabi. This city is the principal in the Punjab and has some large printing presses. The North-Western Railway has here its headquarters, where all its printing is done. This city was just recovering from the terrible earthquake of some years back, and in the West or Montgomery quarter some palatial hotels and shops with dwelling houses were being built. I visited a number of presses, and in nearly all the printing was being done in the Latin faces. The same thing occurred as in other cities I visited; no trouble was experienced in conversation, for our language seemed to be spoken by everyone connected with commercial life.

Mr. C. A. WOOD.

Digitized by Google

The next principal city I visited was Allahabad, with its population of one-and-a-half million, and the language spoken is Urdu. In appearance it is European, especially taking the east side, with its beautiful cathedral and churches and chapels. Numerous newspapers, journals, etc., are printed here, and I should imagine quite 75 per cent. are in the English character. During my visit I was shown over a part of the Government Press by the superintendent, whose name is so well-known among the native and British printing craft, both in India and at home (Mr. Frank Luker). The press is quite modern, and one could not help but notice the order everywhere; it was certainly a lesson to see how a white gentleman could control such a lot of natives of different castes. I should imagine, taking the average, that there are more printers in this city than any part of India, and all the matter is Latin and Urdu.

In Calcutta, the capital that was, undoubtedly the Bengali and Nagari types of languages are mostly used, and one could not help but notice that the different sects have their own quarters. At the time trouble was feared with the lower castes of Bengali and sedition seemed predominant. It is a splendid city, and has a large number of printers and typefounders. There are two presses in connection with the Government, and the educational side is well represented by its numerous Universities and institutions, literary, scientific and social. In walking the main thoroughfares you would really think you were in England, for the names are all familiar. Here again no difficulty was experienced as far as the language was concerned. I noticed more foreign machinery in this city than any part of India, except in the Government presses. In this city I met several friends whose kind welcome I shall never forget. It would take columns to explain all I saw and experienced in this wonderful city. It was evident that a large percentage of American and German type, machinery, etc., was used.

From Calcutta to Bombay, *via* Jubblepor, visiting several other cities, a description of which would take up too much time, was a delightful experience.

India and its Dialects.

It will be easy to see that though I visited but one-half of India, hardly touching the south, the difficulties experienced by those who would educate the millions of inhabitants are in the various dialects spoken. For the origin of the Indian scripts we are taken back to the Asoka to find out how the Indian Syllabaries came into existence. In reference to the Indian alphabets, Dr. Taylor tells us that the multitudinous scripts of India—extensive as is their geographical range, dissimilar as they are in their superficial aspect, and even in their structural characteristics—may be traced back to one single source—the alphabet used in the most ancient documents of India. These consist of the edicts issued by the great Buddhist monarch Asoka, who ruled over the greater part of India in the third century B.C.

He also writes in most appreciative terms of the Asoka (or Brahmallaippe) syllabary. He says: "The elaborate and beautiful alphabet employed in these records is unrivalled among the alphabets for its scientific excellence. Bold, simple, grand, complete, the characters are easy to remember, facile to read and difficult to mistake, representing with absolute precision the graduated niceties of sounds which the phonetic analysis of Sanscrit grammarians had discovered in that idiom." The illustration gives the form of the printing letters of the Asoka script, as shown in the ancient inscriptions on rocks and pillars at Delhi, Agra, and elsewhere throughout India and Ceylon.

One of the laws of graphic representation is that symbols are subject to deterioration, and capable of reformation. During the last 3,000 years the original letters of the Asoka

ARABIC.
The script almost universally used by Mohammedans. With a few extra characters it also serves for Persian, Turkish, Urdu, etc. In some forms a fount consists of over 1,000 "sorts."

عَدَّادٌ كَانَ لَهُ كَلْبٌ وَ كَانَ لَا يَزَالُ نَائِماً مَا دَامَ الصَّدَّادُ
يَعْمَلُ شُغْلاً فَاذَا رُفِعَ الْعَمَلُ وَجَلَسَ هُوَ وَأَصْحَابُهُ لِيَأْكُلُوا عَيْشاً
إِسْتَيْقَظَ الْكَلْبُ فَقَالَ الصَّدَّادُ يَا كَلْبُ اَلسُّوءُ لِأَيِّ سَبَبٍ صَوْتُ
الْمِرْزَبَّاتِ الَّذِي يُزَعْزِعُ الْأَرْضَ لَا يُيَقِّظُكَ وَصَوْتُ الْمَضْغِ الْخَفِيِّ

CHINESE
The character used for the various dialects of China. It is read in columns from right to left. Owing to its ideographic nature a *complete* fount may mean anything from 5,000 to 80,000 sorts.

夜 印 愛 外 望 熱 拍 又 特 瓦
位 運 北 昂 擊 阿 卦 折 問 亞
按 怨 黑 厭 萬 額 非 恩 樣

DEVANAGARI.
The great Indian script. Used for Hindi (spoken by over 80 millions in North India), Sanscrit, Nepali, etc. A fount varies considerably in the number of sorts required.

घर मेलबलि पशुओं से भरा हो तो
हो पर यदि उस में झगड़े रगड़े होवे
तो उस से चैन के साथ सूखा दकडा

BURMESE
One of the most complicated of Eastern scripts. The character is derived from the Indian. This type is also used for Karen and other dialects spoken in Burma.

ထာဝရတုရားသည်ငါ၏ထိုး
ထိုဦးဖြစ်ခေါ်တမူ၏၊

GREEK.
In addition to the ancient classics, this character is used for the modern dialect, and also a form of Turkish known as Græco-Turkish. Sorts are often used in other languages where special signs are needed.

Τῶν ὄντων τὰ μέν ἐστιν ἐφ' ἡμῖν, τὰ δὲ οὐκ ἐφ' ἡμῖν
Ἐφ' ἡμῖν μὲν ὑπόληψις, ὁρμή, ὄρεξις· ἔκκλισις, καὶ ἐνὶ
λόγῳ, ὅσα ἡμέτερα ἔργα· οὐκ ἐφ' ἡμῖν δὲ τὸ σῶμα, ἡ
κτῆσις, δόξαι, ἀρχαι, καὶ ἐνὶ λόγῳ, ὅσα οὐχ ἡμέτερα

HEBREW.
The Biblical character, known as "square Hebrew." Besides the Old Testament Scriptures it is used for Yiddish, Judæo-Persian, Judæo-Arabic etc.

אָל חֲבוֹאנָה שִׁקּוּם נָשִׁים וְנוֹת אֶל־הַמִּקְדָּשׁ וְתִשְׁמַדְנָה לְמָנֵי וְתֹאמֶר הָאִשָּׁה
הָאַחַת בִּי אֲדֹנִי אֲנִי וְהָאִשָּׁה הַזֹּאת יָשַׁבְתִּי בְּבַיִת אֶחָד וָאֵלֵד עִמָּהּ בַּבָּיִת: וַיְהִי
בַּיּוֹם הַשְּׁלִישִׁי לְלִדְתִּי וַתֵּלֶד גַּם־הָאִשָּׁה הַזֹּאת וַנִּהְיֶנוּ יְחִדָּו אֵין־זָר אִתָּנוּ בַּבַּיִת
זוּלָתִי שְׁנֵינוּ־אֲנַחְנוּ בַּבָּיִת

IRISH
The Erse character, still in use for Old Irish literature. Our Anglo-Saxon characters were derived from this source.

Do cuaid duine áirithe síos ó Ierusalém go h-Iericó; agus táinig i measc bhit-dheanaí é, do
chlaoidh agus do loit é, agus do imthigh siúmpa, ag
n-a fágadáil leathmharbh.

LAOTIAN.
The script used in Laos and other parts of Annam: only recently produced in type. A good sample of a script originally designed for writing on leaves. Its circular form preventing the *stylus* cutting into the leaf.

syllabary have undergone many changes for the worse (?) in different parts of India.

It is now well known that all the present Indian scripts, except the Persi-Arabic, are merely local varieties of the Asoka Syllabaries, and most of the changes in forms of letters have been gradual. Sometimes a change has been brought about by the material used for writing. Thus the curves and twists of the South Indian scripts are owing to the palm leaf with an iron pen, which would split the leaf if the lines were straight. Other changes, again, have come about by the isolation of different parts of India from one another, and others, again, by a script being used for commercial or religious purposes.

With reference to the original Asoka alphabet, it is to be noted that it is not of Indian origin. Dr. Cust writes: "The Indian alphabet is in this respect an invention of the people of India, who, however, elaborated to a marvellous extent a loan which they received from others." Dr. Taylor says: "The Asoka alphabet has been plainly enlarged by differentiation."

The Asoka characters, like all human inventions, are imperfect. It is a syllabary, and not an alphabet. The same defects are inherited by the Nagari, of which Sir Monier Williams writes that it is devoid of sounds common in Semitic and Turanian languages, and is encumbered by far too great a burden of intricate compound letters.

It also may be noted that there is no sacredness attached to the Asoka or any Indian alphabet. The Vedas were not committed to writing, but taught by oral teaching. Later we find Sanskrit written in scripts. Each vernacular does its best with its own script, and books are printed with the same script used for different languages, and the same languages printed in different scripts. A Babel of languages and alphabets, which must cause confusion.

The Arabic (or Persi-Arabic) is a foreign importation into India, and is used for Urdu and some other languages, but in form it is different altogether from the other dialects. For anything like a clear rendering of an Indian language in the Arabic character an idea of the marks and points is an absolute necessity. It is very trying to the sight, troublesome to write and very difficult for printing. Some hundreds of sorts or characters are wanted, but not so many as the Nagari, and the type is very difficult to distinguish, and less adapted for composition, and takes up more space.

When considering the number of vernacular scripts, such as the Assamese, Burmese, Singalese, Nagari, Telegu, Oriya, Arabic-Persian, etc., which are so complicated as to render the art of reading very difficult, one can hardly wonder at the illiteracy of the people. The Indian census of 1911 states that the total population of the Indian Empire is 315,132,537, of whom 294,875,811 are illiterates. Out of the total population of India only one male in ten and one female in every 144 can read and write. Out of 90,004,855 males over the age of 15, 78,431,214 are illiterates, and the number of persons who learn to read and write over that age is infinitesimal. In Burmah there is a Buddhist Monastery in almost every village, where male children are taught free of charge, and in Madras and other Presidencies this is left to the educational efforts of Christian missions, and in many villages there is not even a school. The Hon. Gokhall estimated that there is only one school of any kind for every five villages.

A writer states that five alphabets—Sanskrit, Arabic, Telegu, Tamil, Malayalam—have each an individuality of its own so decided that a knowledge of one of the five would not compensate for the amount of labour required for the mastery of one of the others.

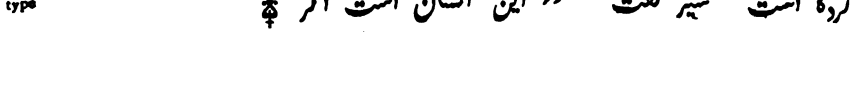
The Indian Empire has a greater number of alphabets than there are for all the other languages of the world ancient and modern put together. There are about 50 recognised indigenous alphabets, and probably twice as many varieties of scripts used in writing them. No less than 10,000 symbols are used to represent 64 sounds.

No Indian writing has reached the alphabetical stage of evolution. All Indian scripts being syllabaries, the consequence of this is that there are only some fifty-three elementary sounds in the whole of the Indian languages which need have separate letters with an alphabet, yet with the Indian syllabaries from 500 to 1,000 types are required to print a book in Sanscrit or Hindi in the Nagari character.

It is suggested that the numerous symbols hinder national progress and stand in the way of national unity; they also constitute a serious hindrance to the commercial and educational progress of the people.

Dr. Isaac Taylor, the great authority on non-alphabetical writing, writes that every system of non-alphabetical writing is so difficult and complicated as to be unsuited for general use.

MARATHI.



The language of 17 millions in Western India. This character is known as the Balbodha, and is derived from the Devanagari

आफ्रिका खडांतील कांगो आणि केप आफ गुद होप ह्या देशांत, अमेरीका खंडांत, न्यू हालंदांत, आणि दुसऱ्या पुष्कळ देशांत रानकुत्रे असतात

⁂ ⁂ ⁂

MIAO.

The language of the Hwa-Miao, the aborigines of Western China. The script is the invention of an Englishman, who recently committed the language to writing for the first time.

⁂ ⁂ ⁂

SIAMESE.

Used by over two million in Siam. Although the language is founded on Chinese, the character is derived from the Indian

ประเทศสยามมีตั้งแต่ผู้ชายทิศตะวันออกเฉียงใต้ทีปลาเสียไทลุด คิดโดยยาวประมาณ ๕๐ โยชน์ โดยกว้างประมาณ๓๖ โยชน์ ประเทศยามนี้ ฝ่ายเหนือแผ่นดินเนื่องกับแดนลาวแผ่นดินจีน

⁂ ⁂ ⁂

TAMIL.

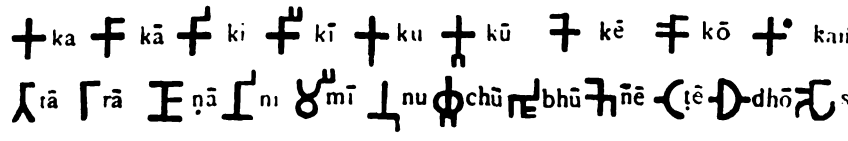
The oldest and most influential character of Southern India. In comparison with most of Indian scripts the type is extremely simple.

மனிதனே, நிபரஞ்செய்தி, இரகசியத்தெரிவித்தல். உன் தேவனுக்கு முன்பாக மனத்தாழ்மையாய் நடப்பதை அல்லாமல் வேறே என்னத்தைச் சித்தம் உன்னிடத்தில் கேட்கிறார்.

⁂ ⁂ ⁂

TALIQUE.

The flowing form of script adapted from Arabic. Used for Persian, Urdu, Pushtu (Afghanistan), etc. A very difficult character to represent by moveable type



شیریني ومردي در یک خاز تصویر خودها دیدند • مرد شیر را گفت میبیني شجاعت انسان کہ شیر را تابع کرده است • شیر گفت مصور این انسان است اگر

THE AŚŌKA ALPHABET.

EXAMPLES OF MEDIAL VOWELS

EXAMPLES OF CONJUNCT CONSONANTS, ETC

Digitized by Google

No typefounder has ever attempted to produce type for all these dialects. One firm alone is reported to have spent £300,000 in the preparation of Indian type. Some of the principal languages would be as follows, Arabic, covering Turkish, Persian, Urdu (Hindustani), Arabic-Sindhe, etc.; Burmese for Shan, Karen, and the ancient Pali language.

Kanarese.	Maliyalam.	Singalese.
Paujabi	Oriya	Persian Taliq
Gujarati	Bengali	Hebrew, Telegu
Tamil	Marathi	Hindi, etc., etc.

The matrices required for these vary from 800 to 80 characters for each fount, but there are many others used to a limited extent.

It may be interesting at the present time to compare this with our Roman characters which, in my opinion, will eventually become the character of India. Attempts are being made to introduce Romanic letters for Indian languages by the Rev. J. Knowles, of the Christian Literature Society for India. The remedy suggested is an Indian national alphabet of simple letters based upon the Roman alphabet.

Our Roman character is making great headway in Japan, and is most generally used for printing throughout the world. They serve to print English (the most prevalent), French, Italian, Spanish, Portuguese, Norwegian, Danish, Polish. Dutch, Bohemian, Hungarian, and, to some extent, German, for in Germany the Latin faces have many partisans who condemn the Gothic as fatiguing to the eye, and it is stated (I have read) that short sightedness is much more prevalent amongst the educated Germans than amongst the reading public elsewhere. The Latin types are exclusively used in the United States and Canada, where French, English and Spanish are prevalent, and in Central and Southern America, Russian type faces greatly resemble the Latin, a lot of the characters being exactly the same. The same applies to Servia, which has a few purely Servian characters in use. The German and German-Austrian and the German-Swiss people very largely use the Gothic characters as yet; but here, again, these appear to be gradually giving way in favour of the Latin.

It seems an almost impossible task to teach a nation an entirely new system of writing, considering the population, and that at the present time in India there are 200 languages and dialects, with over 50 scripts, each having from 500 to 1,000 symbols, and scattered over 1,500,000 square miles, the people living in over 800,000 villages, with only an average of one school in six villages and indifferent to education.

Mr. Wood's firm is prepared to undertake the production of type in all the principal Oriental characters. They can also undertake printing, or supply stereos and electros in these types.

The committee of the Printers' Warehousemen's Pension Fund have reason to be proud of their efforts in connection with the above auxiliary to the Printers' Pension Corporation. The other evening, Mr. C. Hamilton, of the Amalgamated Press, and Mr. J. E. Dixon, of Messrs. R. Clay and Sons, presided at Anderton's Hotel over a crowded and enthusiastic audience, who were amply repaid for their attendance by the excellence of the entertainment provided. Mr. J. F. V. Bennett, assisted by Mr. W. H. Berry, was in charge of the entertainment, and during the evening there appeared Miss Marie Glenn in "Carmena" and "Il Bacio," Miss Rose Russell with "Red Rose of Love" and "Heart of my Heart," Mr. Lionel James, an excellent baritone, in several well rendered numbers, Mr. T. Hawkins, an artist of ability, in "Musical Monologues," Mr. H. Chalk, a most popular favourite, Mr. Rowley Cowper, a topical ventriloquist who is always well received, the Three Gees, vocalists and instrumentalists, in a cleverly arranged medley of rag time melodies, Mr. Frank Carlton, a most humorous raconteur, Mr. Fred Vernon, a capable descriptive vocalist, while the comic side was in the able hands of Mr. Tod Lowen, from the principal London halls, Mr. Geo. Wellington, Mr. Will Ellis, who convulsed the audience with his original patter, Mr. Will Burgess, "Mother's Baby Boy," Mr. Bob Leslie, etc. Mr H. C. Duffy was an excellent accompanist. The secretaries of the auxiliary, Mr. H. Whitlock and Mr. J. S. Edwards, together with the members of the committee, were most assiduous in their duties as stewards.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Printers' Managers and Overseers ASSOCIATION.

PARENT ASSOCIATION.

The ordinary monthly meeting was held at the Old Bell, Holborn, E.C., on Tuesday, 4th inst., the President (Mr. C. J. Gray) in the chair. Owing to the absence of the Assistant Secretary (Mr. C. Morley) from indisposition, his place was filled by Mr. F. W. Seeley. After the minutes of the previous meeting had been read and confirmed, the election of the following gentlemen, on the recommendation of the Council, was unanimously agreed to:—Mr. H. F. G. Allaway (Messrs. Neves and Biscoe, Ltd., works manager), Mr. H. W. Andrews (Messrs. Wertheimer, Lea and Co., machine), Mr. H. F. Blackett (Lanston-Monotype Corporation, Ltd., manager, printing department), and Mr. S. M. Robinson (The Ludgate Printing Co., Ltd., letterpress overseer). The business which followed related to the internal affairs of the Association, and was devoid of general interest.

O. B. Dramatic and Musical SOCIETY.

A successful dramatic performance was given by the above Society, at the Cripplegate Theatre, Golden-lane, E.C., on Tuesday evening, 4th inst., on behalf of the Commiles Cricket and Football Club, an old-established and prosperous club which, like the more recently formed O. B. Dramatic and Musical Society, is composed of and conducted by members of the firm of John Dickinson and Co., Ltd., Old Bailey, and Upper Thames-street. Judging by the crowded attendance, the followers of the out-door sports will have derived considerable financial benefit from the kindly services of the devotees of the in-door arts of music and the drama.

Two plays were presented, "Chiselling," a farce in one act, and "Paul's Return," a comedy in three acts and five scenes, the latter being the longest piece yet performed by the Society, and was ably sustained by a caste of twelve characters. A capital orchestra, under the direction of Mr. Ernest A. Dupé, also a member of the firm, added greatly to the enjoyment of the evening's entertainment. The following are the castes:—

"CHISELLING."

A Farce in One Act by Joseph J. Dilley.

Larkspur, a sculptor ...	Mr. Thomas G. Higby.
Trotter, his man servant ...	Mr. Horace G. Gascoine.
Dr Stonecrop	Mr. Reginald E. T. Bell.
Mrs. Piper, a landlady ...	Miss Mabel La Roche.
Kate, Stonecrop's niece	Miss Edith Craik.

Scene: A Room in Griffin Chambers.

"PAUL'S RETURN."

A Comedy in Three Acts by Watts Phillips.

Richard Goldsworthy ...	Mr. Charles R. Gill.
Geoffrey Goldsworthy ...	Mr. T. E. N. Batchelor.
Howard Flyntskin	Mr. Horace G. Gascoine.
Paul Goldsworthy	Mr. V. Hornby Merry.
Herbert...	...Mr. E. Hawtrey Plested.
Abel Honeydew	Mr. Albert A. Peart.
Beeswing	Mr. Edward Brown.
Miss Zenobia Goldsworthy	Miss Florence Howe.
Mrs. Geoffrey Goldsworthy	Miss Ethel F. Dew.
Beatrice Goldsworthy ...	Miss Sena Beattie.
Blanche Wilton	Miss Ethel Edwards.
Mrs. Clampitt	Miss Hilda M. West.

Deputation of Electors.

Messrs. Ford, Garlick, Jones, Penn, Winch and Wyatt.

ACT I. Scene: Drawing Room in Goldsworthy House, Richmond.
ACT II. Scene: Ornamental Grounds belonging to Goldsworthy House.
ACT III. Scene 1. Boudoir in Goldsworthy House.
2. Corridor in Goldsworthy House.
3. Breakfast Room in Goldsworthy House.

The farce was full of highly grotesque incidents from start to finish. Mr. Horace G. Gascoine very cleverly sustained a comic part with plenty of opportunities for the display of his talents; Mr. Reginald E. T. Bell made a capital self-opinionated fussey old gentleman, and Mr. Thomas C. Highby was successful as the designing sculptor. The comedy was a somewhat heavier piece than has hitherto been performed by the Society, and provided a good test of its dramatic abilities out of which all the performers emerged with credit. Act II. provided a capital bit of acting on the part of Mr. Charles R. Gill and Mr. V. Hornby Merry, who with Miss Sena Beattie, Miss Florence Howe, Miss Ethel Edwards and Messrs. Horace G. Gascoine and Albert A. Peart were excellent in their respective parts. The piece brought out some wholesome lessons on the imperfections of human nature in society life, and the final reward of virtue, and was well received.

The orchestra rendered the following selection:—

Selection	San Toy ...	S. Jones.
Overture	Mirella ...	C. Gounod.
Hungarian Dance ...	Czardas No. 1	G. Michiels.
Entracte	Le Trianon ...	C. Hemann.
Two Step ...	Policeman's Holiday	E. Ewing.
Sketch ...	... Coon's Patrol ...	A. Lotter.
Waltz	Mon Reve	E. Waldteufel.
March...	Beyond the Seas	W. B. Tucker.

God Save the King.

The "Daily Citizen."

The future of the *Daily Citizen* was discussed at a national conference of the Labour and trade union movement assembled at Caxton Hall, Westminster, on Monday. There were present representatives of trade unions, trades councils, Labour Representation committees, the Independent Labour Party, and the Fabian Society. Among the unions and societies which had sent delegates were the Printing Machine Managers, Bookbinders and Machine Rulers, London Society of Compositors, Lithographic Printers, Printers' Warehousemen and Cutters, Operative Printers, and the Typographical Association.

After hearing statements from various speakers as to the financial and business position of the *Citizen*, Mr. T. Shaw moved:—"That this conference hereby declares that the *Daily Citizen*, as the official organ of the Labour movement, should be loyally supported by the workers, and, further, that the delegates present pledge themselves to work to secure from their members an amount equal to 1s. per annum per member for three years to secure the permanent success of the paper, and urges that those unions who have not yet invested should subscribe capital." Mr. Bellamy seconded, and paid a warm tribute to the *Daily Citizen*. The resolution was carried with but two dissentients.

Special Prepaid Advertisements.

IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us by the first post on Wednesday to insure insertion the following day.

Situations Wanted.

LITHOGRAPHY.—WORKING FOREMAN requires change; well up in all branches of the trade, Colour and Commercial, Transferring and Machine; can send references and specimens.—Address, No. 13164, Office of the British and Colonial Printer and Stationer, 58, Shoe-lane, London, E.C. 13164

MACHINE OVERSEER, fully and practically conversant with the most modern methods and machinery, desires berth in Colony, Australia preferred.—Address, No. 13161, Office of the British and Colonial Printer and Stationer, 58, Shoe-lane, London, E.C. 13161

Machinery and Plant for Sale.

ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos.—Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

CROSSLEY GAS ENGINE, 4-5-i.h.p.; can be seen at work in Plymouth.—Write, H. 26, Western Morning News, Plymouth. 13162

QUAD CROWN BREMNER WHARFEDALE for Sale, cheap; can be seen running at Plymouth.—Write, H. 27, Western Morning News, Plymouth. 13163

Machinery Wanted.

SECOND-HAND TITCHENER TYPECASTING MACHINE, with all accessories, wanted at once.—State price and condition, to No. 13166, Office of the British and Colonial Printer and Stationer, 58, Shoe-lane, London, E.C. 13166

Miscellaneous.

OFFICIAL ORGAN of a SOCIETY for Sale; Advertisements average £50 per month; advance signed orders for Advertisements, £180; Paper established one year; reasonable offer accepted; no agents.—Write, L. E., care of Crossley and Co., Ltd., 57, Coleman-street, E.C. 13167

Property To Let.

CLERKENWELL.—Warehouses and General Business or Manufacturing Premises to Let. Modern construction and well lighted. Very moderate Rentals.

13 and 15, Little Sutton Street. Floor space about 28,000 sq. ft., would be divided.

11, Little Sutton Street. Floo s to Let in this building.

17, Little Sutton Street. Convenient corner premises. Floor space about 3,800 sq. ft.

Apply to Caretaker on the premises, or to Mr. T. W. Blackmore, Old Serjeant's Inn, Chancery-lane, W.C. 13898

Trade Notes.

ONE of the oldest and most respected residents of Gravesend has passed away in the person of Mr. Thomas Hall, printer and stationer, of Windmill-street, in his 89th year.

MESSRS. CASSELL will issue, on Thursday (to-day) a new weekly called *Cassell's Family Circle*. It will have a bright two-colour pictorial cover, and will be plentifully illustrated.

THE annual dinner of the Rulers, Bookbinders, Printers and Kindred Trades Association will be held at the Salisbury Hotel, Salisbury-square, Fleet-street, E.C., on Saturday, April 19th. Particulars and tickets may be had from the Secretary, Mr. Geo. A. Eden, 9, Murillo-road, Lee, S.E.

THE annual meeting of the Association of Master Printers of Glasgow was held last Thursday. Mr. John F. Horn, of Messrs. John Horn, Ltd., was elected president for the ensuing year. Mr. John Thomlinson, the retiring president, was accorded a vote of thanks for his labours in the interests of the association.

ON Saturday evening a concert was held in Newcastle, under the auspices of the northern district committee of the Newspaper Press Fund. Mr. G. B. Hodgson, of South Shields, presided, and Mr. R. W. Johnson, Newcastle, advocated the advisability of all working journalists being members of this fund. An excellent concert was provided, principally by members of the Newcastle Glee and Madrigal Society.

THE PRESS CLUB.—The monthly house dinner and concert took place last Saturday evening at the club premises, Wine Office-court, Fleet-street, E.C., the Hon. Harry Lawson, M.P., presiding. During the evening a gold medal and chain, together with a bracelet for Mrs. Inwood, were presented to Mr. A. Inwood, who has been chairman of the club for the last two years. A large number of artistes contributed to an excellent programme.

VERDICT FOR A REPORTER.—An action for alleged slander and libel was brought in the King's Bench last week by Mr. Charles Frederick White, J.P., of Matlock Bath, against Mr. Ernest W. Barnes, a local reporter. Defendant denied uttering some of the alleged slanders, and pleaded justification regarding the others. After considerable evidence had been called, Mr. Justice Darling summed up, and the jury, after considering their verdict out of court for a quarter of an hour, gave their answers to the questions submitted to them by the Judge. Judgment was given for the defendant, with costs.

TENDERS WANTED.—By the Wallasey Corporation for printing and stationery required for two or four years. Particulars from Mr. H. W. Cook, Town Hall, Wallasey. By the Hammersmith Guardians for a supply of printing for one year. Tender forms may be had from Mr. J. Lamb, 206, Goldhawk-road, Shepherd's Bush, W. By the Brighton Education Committee for printing. Tenders to Mr. F. H. Toyne, 54, Old Steine, Brighton. By the Dundee District Board of Lunacy for stationery, printing, etc. Particulars from Mr. R. Allan, West Bell-street, Dundee. By the Carlisle Rural District Council for printing for three years. Tenders to Mr. H. R. Lonsdale, 7, Victoria-place, Carlisle. By the Urban District Council of Waterloo-with-Seaforth for printing, books and stationery. Particulars from Mr. John L. Thompson, Town Hall, Waterloo, near Liverpool.

THE nineteenth quarterly meeting of the Printers' Medical Aid and Sanatoria Association was held at the offices of the London Society of Compositors, St. Bride-street, E.C. In the absence of Mr. C. W. Bowerman, M.P., the chair was taken by Mr. H. J. Chadband. Mr. Arthur O'Connor, the secretary, presented the committee's report, which recorded a decrease upon the quarter's working of £30. The income, however, was quite up to the standard, and it is hoped that the forthcoming quarter would more than account for the deficit. The funds in hand still exceed £400, and it is interesting to note that during the quarter no less than 525 Letters were issued, 60 more than that issued in any previous quarter. The report having been adopted, Mr. T. H. Middleton, secretary of the Stereotypers' Assistants' Society, was added to the list of vice-presidents. The question of the secretary's position was deferred until the annual meeting to be held in May, and in the discussion that arose *re* the first aid classes, it was decided that they be held upon Monday evenings, and a sub-committee was elected to organise the same. A vote of thanks to the chairman brought the meeting to a close.

THE death is announced of Mr. Ernest George Stafford, almanac publisher and printer, Walton, Liverpool.

ACCORDING to *Kemp's Mercantile Gazette* there were four failures in the printing and stationery trades of England and Wales for the week ending Friday, March 7th, the corresponding week in 1912 showed the same number.

ONE of the oldest newspapers in the world is published in Gruningen, a small town of some 1,200 inhabitants in the canton of Zurich, in Switzerland. It is the only newspaper in the place, and is at one and the same time the organ of the Liberals, Conservatives, and Social Democrats, Pages one and two belong to the Liberals, and pages three and four to the Socialists, and the two abuse one another heartily in its pages.

PRODUCTION MANAGERS' ASSOCIATION.—An enthusiastic meeting of prominent manufacturers and officials was held at the Holborn Restaurant on Thursday evening, February 27th, at which a Production Managers' Association was formed. The chair was occupied by Mr. J. W. Stannard, who opened an interesting discussion on "American Methods *versus* British Conditions," during which he gave some striking examples of the results of "Scientific Management" in the States. Mr. E. J. Loseby (Messrs. Napier and Son, Ltd.), Mr. Wm. Gamble (Messrs. A. W. Penrose and Co., Ltd.) and Mr. T. B. Brown (Messrs. Ross, Courtenay and Co., Ltd.) joined in the subsequent discussion. The inaugural dinner (morning dress) will be held at the Holborn Restaurant on April 8th, the subject being "Labour Problems," which will be dealt with by experts in various phases of the problem of labour. Tickets 4s. each. The secretary is Mr. Charles F. Warren, Guest House, Leys-avenue, Letchworth, from whom those interested may obtain further particulars.

PRINTERS' FOOTBALL MATCHES.—A football match will be played on Saturday next between Birmingham T.A. *v.* Coventry T.A., at Radford, Coventry, for the Printers' Pie Furnishing Co. Challenge Cup. The proceeds are for the benefit of the superannuated members of the Birmingham and Coventry Printers' Guilds Benevolent Funds. This valuable silver cup is presented by the Printers' Pie Furnishing Co. (proprietor, Mr. Charles H. Rogers), of Birmingham and London, and is open for competition to Typographical Association branches of the Midlands. Silver medals are also to be presented to the winning team, and these are given by the "Victoria" Press Manufacturing Co., 165, Edmunt-streed, Birmingham, and Vandy-street, London, E.C. The return match of the above is to be played at Birmingham, on Saturday, 22th inst., on the ground of the "Sparkhill Avondale" F.C., Golden Hillock-road, and this cup and medals, and also the Press *v.* Printers' Cup and medals, will be presented at the superannuated members' concert at "Ye Olde Royal Hotel," Temple-row, Birmingham, on the same evening. Tickets may be obtained from the Printers' Pie Furnishing Co., 36, Cornwall-street, and 165, Edmund-street, the cup and medals being on view at the latter premises, and of the hon. sec., Mr. J. H. Morgan, c/o Allday, Ltd., Cornwall-street, Birmingham.

The London County Council General Powers Bill.

SIR,—I do not know whether all your readers have realised that the London County Council are asking for power to make and enforce regulations for all premises in the County of London in which celluloid and other inflammable substances are kept for sale in quantities exceeding 10 lbs. in weight.

This is so far-reaching that it means every retail or wholesale stationer would, after March 31st, 1914, be under London County Council regulations, and have to submit to vexatious control by inspectors of more or less technical education. Some of the leading traders have petitioned against this, and I do not think for an instant that the County Council will get their Bill through Parliament, but I think the trade ought to know just what control the County Council are asking for.

When one comes to think that bookmarkers, paper knives, statuettes, photo frames, etc., are made from celluloid, it will be seen that it is in the interest of the trade to let every stationer know the scope of this Bill.

Yours faithfully,

THOS. R. BROOKE.

The Caxton Convalescent Home.

Mr. C. J. Drummond presided at the annual meeting of the board of representatives of the above institution, held on Saturday last, at St. Bride's Institute, Fleet-street, E.C. Mr. C. W. Bowerman, M.P., was among those present.

A most satisfactory report was presented by the committee, showing a substantial increase in the income for the year, which had enabled them to pay off another £300 of the building debt, while maintaining the home in its high state of efficiency. The report also referred to the spontaneous expressions of thanks that had been received from grateful patients who had stayed at Limpsfield, testifying to the healthful and invigorating character of the home and its surroundings.

The chairman referred very feelingly to the absence from the meeting of their respected secretary, Mr. E. J. Carr, who had been compelled through failing health to resign his position. Mr. Bowerman also spoke of his acquaintance with Mr. Carr when working with him at case, and kindly references were made by other representatives. It was agreed to retain Mr. Carr as hon. secretary and to place on record an appreciation of his past work.

Mr. C. J. Drummond was re-elected president, and Mr. C. W. Bowerman treasurer. Three vacancies in the trusteeship were filled by the election of Messrs. Geo. Rowland Blades (of Messrs. Blades, East and Blades), Sydney H. Caslon (of Messrs. H. W. Caslon and Co.), and Ernest R. Cook (of Messrs. Badoureau and Jones). Mr. S. J. White was elected to the vacant secretaryship.

It is hoped in the coming year to bring the work of the home more particularly before the non-subscribing sections of the printing and allied trades, and the secretary will be pleased to hear from anyone likely to become interested. Communications should be sent to the London Office, 3, Cursitor-street, E.C.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

I read in an American journal that "Sir George William Davis, Director-General of Sales for Great Britain and Ireland" of the Linotype and Machinery Corporation, was the guest of the evening on January 28th at a meeting of the Machine Composition Club Chicago, which, I believe, is a sort of Linotype Users' Association.

o o o

The man who woke one morning to find himself famous is paralleled by our able but modest friend, Mr. G. W. Davis, the sales manager of the "L. and M.", who woke up on January 29th in America to find himself be-knighted.

o o o

I fancy he must have applied to himself the old wheeze as to whether he couldn't charge extra for knight work.

o o o

Especially when the knighthood was conferred by democratic America!

o o o

Well, it gave him a good laugh, and this was due to him, for when speaking at various American gatherings in the happy, hearty way we are familiar with, he caused much fun by the way he "got home" every now and again. He deserved a chuckle for himself. Besides, there was the enjoyment of his many London and Ilford friends to be taken into account.

o o o

Altogether, I say good luck to the American pressmen. I wish they'd knight a few more men whom we would all wish to honour. And if they always confer this distinction, as in this case, only on some man already enrolled as a knight in a veritable, if not a formal, Legion of Honour, none of us need cavil or complain.

o o o

I quite intend to have two months in the States next year, and Lord Francis Colebrook will have the time of his life at some printing

Digitized by Google

functions. I shall at least talk at large about my friend, 'Count Renderd.

o o o

I'm hoping to button-hole Mr. Davis—Sir George William Davis, I beg his pardon—for a few "Quads" expressing the essence of his observations.

o o o

Printing has had a real and a distinctive loss in the death of Mr. T. R. Way. I incline to say that in some very important respects he was the most distinguished British lithographer of his time. He expressed, not in words so much as in work, a sorely needed protest against the meanness, the meretriciousness, the miserableness of very, very much of the lithographic work and of the general printing of the age. He showed what great results, what heart-satisfying results could be attained by means of very simple materials rightly utilised.

o o o

Perhaps his pastel lithographs upon brown paper were some of his most characteristic productions. One must say, too, that he was a prolific craftsman, when one remembers the recent Way exhibitions of lithographic prints. His "flowers of the month," depicting Kew Gardens in twelve aspects were quite splendid colour work. He worked in pastel on brown paper and printed on brown paper. His colour pastel litho posters for the Underground Railway were the admiration of all competent judges and art connoisseurs and I think of the public.

o o o

I well remember the meeting of the Royal Society of Arts at which Joseph Pennell lectured upon a lithographic subject. The particular point just then occupying attention was as to whether a litho made upon litho transfer paper and applied to stone or metal plate, that is taken right off, taken finally away from the paper as a condition of transferring and put to stone or plate, was properly to be called a lithograph.

o o o

Pennell said it was. So did Whistler. So of course would Mr. Way have said, though I do not think he spoke at the meeting. He was upon the platform, but he was there in his character as a working artist lithographer. He was drawing and superintending transferring before the audience or doing other work to illustrate some points Mr. Pennell was making. I remember that Whistler spoke, and so I think did Mr. Vincent Brooks.

o o o

"That's my argument in a nut shell," an orator exclaimed, rounding off an hour and a-half's talk.

o o o

"What a nut!" cried one poor listener.

o o o

I'm going to cram the Costing Committee's suggestions into a nutshell. Shall I fare better with my critics?

o o o

You are asked to adopt the Costing Committee's system because it is the result of 18 months' close study by a dozen or so of the most trusted and experienced master printers of the country; and because it is most important to have a uniform system as likely to put an end to really erratic prices—like £140, £188, £201, £304 and £343 quoted last January for one public tender and pilloried at the Congress by Mr. Austen Leigh.

o o o

A uniform costing system tends towards uniform pricing, leaving it to reputation for competence and character to settle who shall get the business.

o o o

The central object of the system is to tell you what your operations as printer really cost you for every hour.

o o o

I'm not forgetting "piece"; it may be that the unit must be one of piece like 1,000 ens. Be it piece or be it the hour, you want a unit, to work with, as to which you shall feel confident that it does really embody all the costs which it professes to embody.

o o o

So that you and I may feel a little more personally and more happily interested as we talk the thing over let's take it that you've decided to install the system forthwith. In that case its interest for you is not academic; but is direct, personal and commercial.

o o o

You start then with your last year's profit and loss account and balance sheet, or your profit and loss account alone if you've not yet a balance sheet for the last financial year.

o o o

From that you take out your expenses and you next allot due items of expenses to the due departments as accurately as you can. You've three departments at least—case-room is one, machine-room is a second, and warehouse (or binding) is a third. Even a small printer may have a fourth or fifth.

o o o

Picture framing for instance begins to be quite an important department with many country printers, particularly those who have a retail stationery side; and picture framing is manufacturing, and distinct therefore from the stationery shop. I am leaving stationery out of it for this purpose.

o o o

You place your various year costs in the appropriate departments; such as case-room; litho; machine-room; binders, rulers, artists, warehouse. You find the total for the year; wages plus departmental costs for each of these departments. You treat each department like a separate business; which must pay on its own.

o o o

Don't forget that someone would pay you about 5 per cent. for your money. Someone *was* paying you 5 per cent.—isn't that so, now?—before you put it into your business.

o o o

Some percentage, I won't say what, 3, 4 or 5, is a proper cost; is one component of your hour expense rate.

o o o

You get your totals; you divide by 52; and, hey presto, you've got your total weekly cost for each department.

o o o

"My working hours divided into that total will give me——"

o o o

Something very incomplete. That's what they'll give you.

o o o

For there are all the costs that are not attachable to particular departments still to be taken into account.

o o o

And these are likely to be very large. Rope them all in. None of that old complacent happy-go-lucky confidence that they will be properly provided for in the large amount of profit put on.

o o o

Say that you do put 50 per cent. of what you call profit on to your departmental costs and that 49 per cent. suffices to cover these non-departmental overhead costs and 1 per cent. remains as profit. You've got your profit to be sure; a nice little 1.

o o o

Wouldn't it be much better sense to have the 49 of that 50 per cent properly included as cost and only the 1 per cent. presented as profit. The wayfaring man, though a fool would not, then err therein, but would realise horribly the dismal paucity of the reward. Which paucity is masked if the costs are not figuring as costs, but merely "taken into account," as one is light-heartedly apt to say.

o o o

Why do we talk of taking things into account, when what we exactly mean is that we're not taking "them into account," but at best are only "bearing them in mind." Don't let us bear them in mind, but bear them on paper. Our banker will.

o o o

Excuse one more repetition of Gladstone's suggestive words to his son: "Keep your accounts, and the easiest way to keep them is to keep them carefully."

o o o

The pleasantest way, too, as Mr. W. A. Waterlow impresses. I could not have believed, he told the Costing Congress, I could have taken so much personal interest in business details; it has been real enjoyment——since his installation of this costing system, you understand.

o o o

To resume our voyage of "recovery."

o o o

You total the non-departmental overheads. And you "recover" them under this system by first adding not less than 10 per cent. to your "material." You then add a sufficient percentage on to the total of departmental costs (*i.e.*, wages plus other departmental costs) to equal all the remaining "overheads."

o o o

Mr. Rushton, who spoke with experience of north of England printing plant, demonstrated that 16 per cent. would be nearer than 10, as the proper amount to add to material.

o o o

Mr. Fletcher, of Norwich, also thought 10 per cent. would not be enough.

o o o

Mr. Hazell said the Committee thought 15 to 20 per cent. would be nearer than 10 per cent., but they thought no printer would believe them.

I suppose they may have been right; only it recalled to me the old story of Elijah, who, when he lamented that he was the only believer of his age, had to learn that if all those who had not lost faith were gathered together they would make a Congress 10,000 strong.

o o o

Of course, as Mr. Fletcher observed, if you keep the addition to materials low you compensate by a big percentage for recovery of remaining overheads.

o o o

I incline to think Mr. Hazell must have argued in Committee for a higher figure than 10 per cent.; and, if so, perhaps he will bring them to a higher figure in a final presentment of the forms.

o o o

I hope so. I don't like reducing particular percentages and inflating general percentages. It was that sort of thing I fancy that gave rise to the cynic's phrase:

o o o

"There's nothing so deceptive as facts, except it be figures."

o o o

Let's get at the real thing. No doubt there may be printers like the one whom Mr. Austen Leigh quoted in Congress as protesting: "——— it all; do you think I want to know what I'm losing on every job?" Or like the men about whom a correspondent wrote to Colonel Wright Bemrose: "Rather than know all their costs some printers would prefer to go into the next world right away."

o o o

Bernard Shaw would say "They would prefer to go to Hades right away." In a famous play he has represented that region as the home of make believe; of uninquiring satisfaction of a sort; whereas his heaven is "the home of the masters of reality." It's a fine phrase. As business men we can get near that condition and that region now, by each making his own works the home of a master of reality.

o o o

That nut's growing. I must press on—and compress.

o o o

I have stated that what remains to be recovered when you've added 10 per cent. or some other figure to your material you next recover by seeing what percentage must be added to the total of wages plus-departmental-costs to equal this as yet unrecovered balance. It will very likely be 20 per cent.

o o o

You go to work much the same way in the machine room. Only there you treat each £50, or part of £50, of the capital cost of a machine as a machine unit, or shall I say? as a machine by itself.

o o o

You find what are the year's wages of the non-productive order; you get together your machine departmental costs (apart from the minders and feeders' wages, apart, that is, from the direct cost of running the machine), you add the year's non-departmental, non-productive machine-room costs as in the other case, and you then divide the total number of hours run by the machines in the year into that figure. It will very likely work out at about 3d. Say it does. Threepence then is your hourly machine unit rate. Or 2s. 6d. is your machine rate for a ten unit machine.

o o o

On to that add your cost for minders and feeders per hour. Altogether they could very likely show your big perfector to be costing nearly or quite 5s. per hour to run, for non-productive plus minders and feeders' wages.

o o o

We may come to hear less of the machine-room making all the money and the case room making all the loss. It was always nonsense.

o o o

The advantage of apprentice labour is best distributed over machines, says Mr. Harry Cooke, the committee's machine-room exponent—very able, very lucid exponent—in the Congress. He worked out the productive costs in terms of journeymen and then took off $\frac{1}{8}$th for the benefit of the apprentice labour.

o o o

Apprentice labour, Mr. Hazell well remarked, is nearer to the journeymen standard in the machine-room, than in the case room.

o o o

Feeding-in is certainly a different thing from display work.

o o o

There you have it all in a nutshell. Eh? beg pardon. I didn't catch your words.

o o o

"What a nut!"

Frank Colebrook.

PRINTING AND STATIONERY.

TENDERS are invited for General Printing Work and Stationery and for Printing the Voters' Lists and Registers and July Lists, etc., for the period ending March 31st, 1916.

Forms of Tender (price 21s. each, returnable on receipt of a bona-fide tender) can be obtained on application at the Town Clerk's Office, Town Hall, Rosebery Avenue, E.C., any day (except Saturday) from 10 to 4 o'clock, and on Saturdays between 10 and 1 o'clock, or by letter accompanied by a remittance. Specimens of the Lists and articles required can be inspected during the times above mentioned; such inspection, however, should be made as soon as possible. Tenders, endorsed "Printing (General)," "Printing (Registration)," or "Stationery," should reach me on or before Monday, April 7th, 1913.

Only those tenders made upon the official form, properly filled up and signed, will be considered.

By Order,
G. W. PRESTON,
Town Clerk.

Trade Unions and Newspapers.

The Royal Assent was given on Friday to the Trade Unions (No. 2) Bill, as amended by the House of Commons. On the previous day an interesting amendment by the House of Lords was considered, by which they sought to impose restrictions on a trade union's right to publish and circulate a political newspaper. The intention was to place an obstacle in the way of trade union moneys being used for the establishment of Socialistic newspapers without a ballot of the members being first taken upon the subject. The Attorney-General, however, declared that if this were accepted it would be a great embarrassment to trade unions, and in the view of the Government it would be an undue restriction on the trade unions. He argued that it would be impossible for the trade unions to carry out the condition implied in the amendment, because a newspaper might be devoting itself on one day mainly to political purposes and on another day mainly to statutory objects or to industrial purposes. A newspaper which was supported in any way by trade union funds would be one existing for the purpose of the labour interest. It followed necessarily that sometimes this newspaper must deal with political matters. It was equally true that on many occasions it would not deal with political matters in the strict sense, but with industrial matters. The test which would have to be imposed was whether the main purpose of the newspaper came within the statutory objects. The purpose must vary from day to day, and there would be a considerable amount of litigation, of which it would be impossible to foresee the result. The amendment would be very difficult to carry out also because the newspaper would represent the interests of various trade unionists. That would mean the necessity for having a ballot of all the trade unions contributing in order to determine whether they should apply any of their funds for the purpose of the newspaper. Finally, he asserted that the principle of providing against the funds of the union being used except at the wish of the majority of the members could not be applied to the publication of a newspaper. Mr. Bonar Law pointed out the reasonableness of the amendment, and that there was nothing to prevent a trade union from running a political newspaper advocating the views of a particular candidate, and running it at the expense of men who were members of the political committee of another candidate. Lord Lansdowne, in the House of Lords, explained that the amendment was not framed, as was erroneously thought by some, to forbid trade unions to use their funds for the purpose of promoting the publication of a political newspaper, but to include it among those objects to which a trade union would not be entitled to apply its funds without special authorisation from those who contributed to the funds. However, to avoid the Bill being lost, and legislation being necessary, whilst the flaw in the bill was not vital, the Opposition agreed not to challenge a division, and the Bill was passed without the Lords' amendment.

Common Errors.

PRINTERS, like writers for the Press, fall into errors. Therefore, there is an absolute necessity for a responsible, well-educated, practical proof-reader in all printing establishments, because, he is not only the individual to whom the author of a MS. looks to for help, but he is the backbone or guiding hand of large composing-rooms, and his principals expect him to be faultless. Hundreds of compositions are passed every day without going through the hands of an expert reader, the result being that our daily and weekly papers are not so well turned out and so free from typographical errors as they were 20 years ago. The blame may be rested on the modern education the printer receives, and the want of a proof-reader in most cases—not to speak of the principal's orders to the composing-room. We have heard of one significant case. The compositors were told not to trouble about punctuation if they were in a hurry, and naturally the result was an unedited and ungrammatical issue of printed matter. A writer in the *Oldham Chronicle* recently stated that a boy in a printing office was corrected for writing "his" when it should have been "is." His father bought a newspaper printed at that office and triumphantly pointed out that the word was sometimes his and sometimes is. Of course it was. A grammarian would explain somewhat thus, taking the sentence "That was given for you and I" (me): The preposition for governs me (not I) in the objective case. "John told you and I (me) to go away." The verb "told" governs "me," not "I," in the objective case. "The ladies . . . to us men." Us is in the objective case governed by the preposition "to." "Annie called for us two." Us is in the objective case governed by the preposition "for."

Railway Storage.

THE new storage charges of the railway companies will come into operation on March 24th, and papermakers and those engaged in the allied trades should note that these charges are really a corollary to the recent revised scale of demurrage rates. It appears that the alteration will not affect people who take delivery of goods immediately on arrival, but only applies to goods that the companies are asked to warehouse. Warehousing in the past, the companies contend, has not paid them, and they maintain that it is now only reasonable that some payment should be made for the benefits derived by the trader or manufacturer as the case may be. Railway companies are not bound to provide ware-

Digitized by Google

housing storage, and the like, but if they did the Railway Acts prescribed that a reasonable charge could be made "by way of addition to the tonnage rate." Broadly speaking, the companies have not advanced the rate per ton for storage, but they have cut down the "free period"—that is the period goods were allowed to lie in a warehouse. There will also be a charge for a handling service. Goods left in the yards will be unaffected. The matter is one, however, likely to seriously increase the burdens of the paper trade. Notices have already been distributed of the amended charges on goods stored at various stations. For instance, we have before us an advice to the effect "that for the first week or part of first week (after free period of 48 hours expires) the charge on paper (except waste) will be 9d. per ton and waste paper 11d. per ton; for every week or part of a week after that first charged 4d. and 6d. respectively." This compares with a previous minimum charge of 3d. per ton per week or a part of a week per consignment.

Kingsway has been "filling up" steadily for some time past and its rapid development into one of the important business thoroughfares of London was further illustrated on Tuesday, when Sir Herbert Marshall, J.P., of Leicester, and Regent House, formally opened the extensive new premises of the Dictaphone Co., hitherto of Oxford-street. Many well-known London business men gathered on the invitation of the managing director, Mr. Thomas Dixon, and an interesting feature of the ceremony was the receipt by wireless of a message of congratulation from Commendatore G. Marconi, who has, at Marconi House in the Strand, one of the largest Dictaphone installations in the country. The company's new offices are a model of modern business equipment, and the problems of light and air space to which so much importance is now attached by systems experts have been carefully studied.

The new numberof "One and All Gardening, 1913," London—Agricultural and Horticultural Association, price twopence—is the eighteenth of a series which has been successful from its first inception by its present editor, Edward Owen Greening, F.R.H.S., who has seen a million-and-three quarters copies issued from the press. A first edition of 100,000 of the present issue marks the confidence of the publishers in its continued popularity. The annual consists as usual of 128 pages and neat cover. The articles by expert writers are varied and interesting, and the illustrations numerous. All garden lovers will find something to please and interest them in the "annual."

The late Mr. James William Arrowsmith, publisher, of Bristol, has left estate of the value of £50,000.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, Shoe Lane, London, E.C.
Wednesday, March 12th, 1913.

MONEY has been scarce and the demand for it keen throughout the past week, with the exception of a brief respite on Saturday. The outlook is viewed with some anxiety. Discount rates have also advanced. The Bank of England has bought bar gold this week to the amount of £164,000, and there has been no withdrawals to date. In stock markets Home Rails experienced a sharp recovery in the middle of last week, but markets were greatly disturbed by the heavy prospective army expenditure by the chief Powers, especially Germany. There has been no expansion in business, and a nervous feeling continues. The carry over in General Stock Markets took place yesterday, and Contango rates were stiff. Consols are again lower, at 73¼ to 73⅜ for money, and 73 1/16 to 73 1/16 for the account.

Business has been extremely quiet in the miscellaneous industrial market, and the opening of the new Account has brought no increase in the volume of business. In the section relating to paper and print movements have mostly been downwards. Last Friday Cassell and Co. rose ¼ to 4¾–5⅛, but falls have occurred in Amalgamated Press Ord. of 1⅜ to 6⅛–6¼; in Lanston Monotype Corporation of 1⅛ to ⅞–1; in *Standard* Newspapers Pref. of ½ to 2¼–3½, and in Weldons Ord. of ⅜½ to 1 15/32–1 17/32. Business has been done during the past seven days in Amalgamated Press Pref. at 21s. 6d., and 21s.; in Associated Newspapers Pref. at 20s. 7½d.; in Cassell and Co. at 5; in *Financial News* Pref. at 15s. 3d.; in Ilford Ord. at acc. 12s. 6d.; in *Illustrated London News* and *Sketch* Ord. at 3s. 3d.xd., in the Pref. at 13s. 3d., acc. 14s. and 14s. 3d., and in the Deb. at 65½; in International Linotype at 80½; in Lanston Monotype Corporation at 11s. 3d., 10s. 9d. and 11s.; in Linotype and Machinery B Deb. at acc. 45; in Edward Lloyd Pref. at 22s 6d.; in Mansell, Hunt, Catty and Co. Ord. at 45s; in George Newnes Pref. at 15s. 3d., 15s. 6d. and 15s.; in C. Arthur Pearson Pref. at 68s. 9d; in Spicer Bros. Pref. at 9⅜, 9 7/16 and 9⅜; in Raphael Tuck and Sons Ord. at 17s. 3d. and 17s; in Waterlow and Sons Pref. Ord at 12 5/16; in Waterlow Brothers and Layton Ord. at 6, and in the Pref. at 6¾; in Weldons Ord. at 33s. 1½d., 32s., 31s. 3d., 32s. 6d., 31s. 3d. and 32s., and in the Pref. at 19s. 6d., 19s. 6d. and 19s. 3d.; and in Wyman and Sons Pref. at 13s. 9d.

DIVIDENDS AND REPORTS.

Annandale and Son, Ltd. (Polton).—The thirteenth annual report of the directors for the period ending December 28th, states that after fully maintaining the mill and machinery in thorough efficiency, the balance at the credit of profit and loss account amounts to £5,258 4s. 8d. This the directors propose to deal with as follows:—To provide for the preference dividend already paid to November 11th, 1912, and for amount accrued to December 28th, 1912, £2,354 3s. 4d.; to provide for the interim dividend on the ordinary shares already paid for the first half-year at the rate of 4 per cent. per annum, £1,130; and to pay a final dividend for the second half-year at the rate of 4 per cent. per annum, £1,130, leaving to be carried forward to next year, subject to directors' and auditors' fees, £644 1s. 4d. The director who retires by rotation is Mr. Sommerville, who is eligible for re-election.

Culter Mills Paper Co., Ltd.—The report of the Culter Mills Paper Co., Ltd., covers the year ended December 31st, 1912. The profit for the year is £10,032, which but for the undermentioned circumstances would have been larger, but which, all things considered, the directors regard as satisfactory. Following on the railway strike of 1911, the year under review was marked by a prolonged coal strike, by the dockers' strike, and by labour unsettlement generally. These trade disturbances have been accompanied and followed by a very serious increase in costs of coal and all raw materials, which have affected to some extent the year under review, and cannot but adversely affect the results of the present year, since there is little prospect, in view of keen competition, of obtaining such substantial increases on the prices of the company's productions as will compensate for the increased costs. The disposable balance is £12,756 14s. 10d., and the directors recommend a dividend of 5 per cent., or 1s. per share, whereof 6d. payable March 7th and 6d. payable September 1st next, carrying to works and property (thus reducing their value to £67,000) £5,911, and leaving at credit of profit and loss account £3,345.

Hartlepools Pulp and Paper Co., Ltd.—The directors report that after deducting £2,000 for depreciation, the profit on the half-year's working is £2,229, and £2,370 was brought forward. The directors recommend a dividend of 6 per cent. per annum, free of income-tax, and the carrying forward of £2,724. The half-year's profit of £2,229 compares with £2,809 announced a year ago, and £3,326 two years ago. For the last-named period only £1,500 had been allowed for depreciation, as against subsequent allowances of £2,000 each half-year. The profit in the year ended last month was £8,333, as against £9,805 in 1911-12, and £5,899 in 1910-11. In former years the company paid 10 per cent., but later there was no distribution for some years. A debit balance which accumulated was cleared off in 1911, and dividends were resumed with 5½ per cent. for the year ended January, 1912, and for the last year 6 per cent.

NEW COMPANIES.

Mackirdy's Weekly, Ltd.—Registered with a capital of £20,000, in 19,000 shares of £1 each and 20,000 shares of 1s. each, as publishers, printers, etc. To adopt an agreement with Mrs. Mackirdy to produce and edit a weekly newspaper.

Lintzford Paper Mill Co., Ltd.—This company (private) has been registered to acquire and work the Lintzford Paper Mill, Lintz Green, Durham. The first directors are Messrs. A. E. Musgrave and V. Jackson, the latter being managing director. The capital is £15,000, in £1 shares.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

Bemrose and Sons, Ltd.—Deed dated December 31st, 1912 (supplemental to trust deed dated May 5th, 1892), to secure £10,000 debentures, ranking *pari passu* with £30,000 like debentures issued under principal deed, and giving further security to the trustees, charged on certain lands and premises in Derby, and book debts, plant, machinery, fixtures and stock-in-trade. Trustee—Parr's Bank, Ltd., 4, Bartholomew-lane, E.C.

COMPANY NOTICES.

HERTFORDSHIRE POST and PRINTING Co., Ltd.

At a meeting of the company, held at London, on February 6th, the following resolution was passed; and at a subsequent meeting on February 24th, was duly confirmed:—"That the company be wound up voluntarily." And at such last mentioned meeting the following resolution was also passed:—"That Mr. Stephen L. Giraud be appointed liquidator for the purpose of such winding-up."

Notice is given, that a meeting of the creditors of the company will be held at London, on March 14th.

JAPAN PRESS, Ltd.

Notice is given, that a petition for the winding-up of the company was, on March 5th, presented to the Court by the Anglo-Japanese Bank, Ltd., 70, Cornhill, London; and that the said petition is directed to be heard before the Court at London, on March 18th.

COMMERCIAL INTELLIGENCE.

Re RICHARD WM. JULIUS MEYE,
Lithographic Printer.

The first meeting of creditors was held the other day at the London Bankruptcy Court, under the failure of this debtor, now managing director of Richard Meye and Co., Ltd., lithographic printers, 153, Bishopsgate-street, E.C. Mr. W. P. Bowyer, official receiver, presided. It appeared from the debtor's statements that he entered the trade on leaving school in 1883, and started on his own account in 1900 at 29, Spencer-street as a lithographic artist, with a capital of £80. He traded with success for six years, and then gave up that business and joined a Mr. Woodruff in his business of a lithographic printer, carried on at 68, Aldersgate street, E.C. They traded as Woodruff, Meye and Co., and the deed of partnership provided for an equal division of the profits. The debtor put £200 into the business, most of it being borrowed for the purpose. The venture was not a success,

Digitized by Google

owing to loss suffered through the stoppage by the Post Office of a patent easy opening advertising wrapper, which the firm manufactured, and upon which they had spent a deal of time and money. The partnership was dissolved a year after the start, and all the liabilities have since been paid. After the dissolution the debtor endeavoured to continue what remained of the business on his own account for a short time at the same address, and subsequently at 29, Spencer-road. He borrowed money from time to time to keep the business going, but got into difficulties owing to loss of trade through illness, general losses in the business, and want of capital. In December, 1911, the debtor consulted his largest creditors, and it was eventually arranged that a small private company should be formed to run the business and provide the necessary capital to keep it going. Richard Meye and Co., Ltd., was formed in January, 1912, with a nominal capital of £100. The preliminary expenses were provided by a creditor, to whom in return all the shares were allotted. The company agreed to give the debtor £10 for the business. He duly received that sum, and was appointed director on terms that he was to receive a one-third commission on all orders obtained. The present liabilities are roughly estimated at between £900 and £1,000, and are chiefly in respect of moneys borrowed and goods supplied for the business prior to its conversion to a company. The debtor attributes his failure to want of capital, to loss on the trading owing to illness and consequent inability to give attention to the business, and to bad trade during the last four or five years. In the absence of any proposal, the case was left with the official receiver to be wound up in bankruptcy.

Re GEORGE FREDERICK HUNDLEY, Lithographer's Manager.

This debtor attended recently, before Mr. Registrar Hood, at the London Bankruptcy Court, for public examination upon accounts showing total liabilities £1,013 11s. 2d. (unsecured £713 11s. 2d.) and assets "nil." He stated in reply to Mr. W. P. Bowyer, official receiver, that he commenced business as a lithographer in February, 1896, with about £10 capital, at St. Andrew's-hill, E.C., subsequently removing to Godliman-street, afterwards to 36, Bread-street, and about 1906 to 16 and 18, Harp-alley, E.C. The business was profitable and in the early part of 1910 witness was joined by two partners, who introduced about £400 capital. The business was successfully continued under the style of George F. Hundley and Co., until August, 1910, when their premises were destroyed by fire. The partnership was dissolved about September, 1910; his partners received £250 between them for their interest therein, and witness continued the business alone until the end of 1910, when his stock, etc., was purchased for £50 by a firm who had since employed him as manager at a weekly salary. In March, 1911, witness agreed to pay his creditors, whose claims amounted to about £500, a composition of 5s. in the £, by three equal instalments, but he had only paid one instalment, and being pressed by creditors he filed his petition. Witness attributed his failure to loss by the fire in August, 1910, to unsuccessful litigation and the costs thereof; the loss by the fire he estimated at £600, and loss of two actions cost him £336. Proper books of account were kept in the business but most of them were destroyed in the fire. The examination was concluded.

Re HENRY STACEY SMITH, Stationer, Printer, etc.

This debtor, described as of 18, High-street, Starbeck, and of Station-square, Harrogate, appeared the other day before the Registrar, Mr F. Perkins, at the York Bankruptcy Court. The observations of the official receiver (Mr. D. S. Mackay) showed that the order of adjudication was made on the application of certain creditors on January 1st, 1913, and debtor gave notice of suspension of the payment of accounts. He first began business eleven years ago at Otley with a capital of £30, and, after trading for about six years, he sold the business stock and plant for £150, and, after paying all debts, he had from £40 to £50 left, with which he started a confectionery business at Boroughbridge. The latter business was carried on for about six weeks, during which time he estimated that he lost between £15 to £20. He then removed to Starbeck, and opened the printing, tobacco, and sweet business on £60 capital, of which £30 was lent him by his mother. At the end of three years he sold the tobacco and sweet business for rather more than £100, and removed the printing business to his present address. Eighteen months ago he opened a shop in Station-square, Harrogate, in the tobacco trade, which he continued until the 25th ult., when he sold the stock privately for £8. He stated that he had about £40 free capital when he opened the Harrogate shop. On October 30th last debtor gave a bill of sale for the printing plant and furniture at Starbeck to his mother, and secured £45, of which it was said that £15 was advanced at the time, and £30 in respect of the loan named above. Debtor stated that he was not aware of insolvency until four months ago, and admitted that he had contracted debts since them. His gross liabilities were £253 2s. 6d., and assets expected to rank for dividend amounted to £214 3s. 6d. After several questions from the official receiver, an adjournment was made till April 4th next.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

BROWN, H., and NORMAN, W. H., trading as the City Engraving Co., 7, Dock-street, Hull, engravers and lithographers. Debts by H. Brown, who will continue the business on his own account at the same address and under the same style.

MACHIN, P. J., KOENIG, A. C. L., and MINTO W. C., trading as Machin and Koenig, at Harecourt, Aldersgate-street, London, E.C., paper merchants, etc. Debts by P. J. Machin and A. C. L. Koenig who will in future carry on the business under the same style in co-partnership with P. C. B. Machin. February 28th.

WYLLIE AND SON, booksellers, stationers and publishers, Aberdeen. Debts by G. N. and E. A. Wyllie. January 31st.

DISTRIBUTION OF ASSETS.

OSBORNE, E. M., lately trading as E. C. OSBORNE and Son, 84, New-street, Birmingham, printer and manufacturing stationer. Claims by March 31st to Lee, Musgrove and Co., 18, Newhall-street, Birmingham, solicitors to the executors.

THE BANKRUPTCY ACTS, 1883 AND 1890.

THE NEWSPAPER PRESS DIRECTORY, 1913. London: C. Mitchell and Co., Ltd., 1 and 2, Snow-hill, Holborn-Viaduct, London, E.C. Price one florin, post free, 2s. 6d.

In the category of indispensable reference books must certainly be placed this old-established Newspaper Press Directory and Advertisers' Guide, now in its 68th year, and which has just been published for the year 1913. Every business man recognises the necessity for some knowledge of the advertising media of the Empire, and some idea of the potentialities of the various markets extending as they do over twelve million square miles, and covering the wants of four-hundred million people. It is this information which the Newspaper Press Directory affords. The Newspaper Gazetteer Sections form a reliable guide, not only to the Press of the United Kingdom, the Colonies and India, but to the leading newspapers and publications of foreign countries. The Colonial and Foreign Section includes a series of deeply interesting articles upon the trade of Canada, Australia, New Zealand, India, South Africa and the West Indies. The latest trade statistics and tariff changes in the Dominions are included, the articles being written vividly enough to give some impression of life overseas. There are continual references to the smaller trades and industries, so that no merchant or agent shall feel that his particular interest has been neglected. An article by Mr. George Edgar on the "Trend of Modern Advertising," gives some idea of the changes in newspaper advertising since the Directory first appeared. In 1846 there was not a single daily paper published anywhere in the United Kingdom outside London. To-day there are ninety or more dailies in Great Britain and Ireland. Even twenty years ago slip-shod advertisements set in shabby, old-fashioned types were the rule. If illustrations were used they were the work of ill-paid hacks. The necessity for appealing to a world-wide market has changed all this. The new Copyright Act gives Mr. George Leach, barrister-at-law, matter for an informing article. The writer points out the many changes in the law, which have arisen from the effort to codify the Seventeen Acts of Parliament which have hitherto governed copyright in Great Britain. The Act of 1842 had the advantage of seventy years of judicial interpretation, and the numerous departures from its phraseology will certainly necessitate much of the work of interpretation being done afresh. Mr. Hugh Fraser's article upon the "Legal Year in its Relation to the Press," deals with such matters as the law of libel, fair comment, advertising lotteries, and copyright in articles. The newspaper obituaries of the year are another feature. Reference to the directory has been much facilitated by the happy device of colouring the edges, so as to distinguish the different sections, while the classification is as simple, and the indexing as ample as ever. The invaluable Newspaper Map of the United Kingdom, showing the distribution of the newspapers in the various towns, has also been greatly improved this year by being printed in colours. The publishers, Messrs C. Mitchell and Co., Ltd., are to be congratulated upon their success in maintaining the efficiency of this newspaper classic.

BUSINESS BOOK-KEEPING SIMPLIFIED is the title of a little booklet by Mr. W. Booth, L.A.A., associated accountant, detailing a practical system of book-keeping for the small trader. An outline is first given of the simplest system in its minimum proportions, sufficient to furnish the bare essentials, and afterwards suggestions are made for additions which would be found an advantage in arriving at a really definite knowledge of how certain profits or losses have been made or sustained. A number of specimen forms are given in explanation of the system described.

THE stories in the March number of *Pearson's Magazine* are varied, and all on a high level of excellence. "The Blackmailers" is another delightful story of the "Terrible Twins," by Edgar Jepson, whose "Lady Noggs"—also a *Pearson's* character—has just been so successfully dramatised. "The Saving of Cynthia" is a very delicately handled and interesting treatment of the "eternal triangle" by Kate Jordan, and there are also good golfing, dramatic, and humorous yarns for every taste.

THE front cover of the March issue of *Printers' Ink* has been printed by the litho offset process. The design consists in part of a female head and shoulders in an oval medallion, and the effect attained is excellent.

Readers' Pensions Committee.

The annual meeting of the Readers' Pensions Committee was held at St. Bride Institute, on Saturday afternoon last, under the chairmanship of Mr. J. Randall (treasurer). The minutes of the last annual meeting having been read and confirmed, thirteen new members were elected.

The annual report, in addition to setting out particulars of a successful year's work (£252 17s. 6d. having been paid into the hands of the Printers' Pension Corporation towards the establishment of a sixth reader's pension), and announcing that Sir Henry Lucy has consented to preside at the annual dinner on behalf of the funds at the Holborn Restaurant on Saturday, May 3rd, contained the following references to Mr. W. Hilton, late Chairman of the Committee:—

"It was with feelings of extreme regret and deep sorrow that your executive received from Mr. Hilton in August last a letter stating that, in consequence of severe illness, he had felt obliged to resign his seat on the Council of the Printers' Pension Corporation. In November his continued ill-health left him no alternative but to resign also the chairmanship of the Readers' Pension Committee. No more serious loss has been sustained by the Readers' Pension movement, for it may truly be said that the committee owes its inception to Mr. Hilton. So long ago as May 3rd, 1886, he read to the Correctors of the Press a paper entitled 'The Old Corrector: What Can we do for Him?' The eventual outcome of the discussion that followed was that on April 9th, 1888, it was resolved that a committee should be formed to endeavour to establish a Special Pension, to be placed in the charge of the Printers' Pension Corporation, and Mr. Hilton became one of the secretaries.

"As a result of the first appeal circulated (which was set up by Mr. Hilton himself) subscriptions came in far in excess of the expectations of the committee, and by May, 1890, they had paid £507 12s. to the Printers' Pension Corporation to establish a Pension of £16 a year.

"Up to 1895 readers had no representative upon the Council of the Printers' Pension Corporation, and as the Rev. Francis Jacox had founded several pensions intended specially for readers, and the Pensions Committee were placing considerable sums year by year in the charge of the Corporation, it was felt desirable that readers should have someone on the Council to watch over their interests. Mr. Hilton was accordingly nominated to represent readers, and was elected on the Council.

"Upon the death of Mr. Begg (the first Chairman of the Pensions Committee) in 1900, Mr. Hilton was naturally chosen to succeed him in that office. From that time his work both for the Committee and on the Council is familiar to the members, and it need only be said that by his geniality, application, and fertility of ideas he gained the affection and respect of all who came into contact with him.

"After receiving Mr. Hilton's announcement of his resignation of the chairmanship, your executive expressed in a letter to him their warm appreciation of the services he had rendered to the Readers' Pension movement for so many years, and their deep regret that his illness had compelled him to relinquish a post in which he had done such good work on behalf of his fellow craftsmen. They are, however, glad to feel that his strenuous labours on behalf of others will, now that he has been struck down by illness, bear some fruit for himself. Mr. Hilton is a candidate at the approaching Pension Corporation election, and it will be both the duty and the pleasure of the Readers' Pensions Committee to see that he is successful on March 15th.

"While on the subject of Mr. Hilton's retirement from the Council of the Printers' Pension Corporation, it will be of interest to members to learn that Mr. Perkins was nominated by your executive to fill the vacancy created by Mr. Hilton's resignation. The nomination was accepted, and Mr. Perkins was elected on the Council.

"In regard to the vacant Chairmanship of the Committee, the executive have pleasure in suggestlng the name of Mr. Feldwick to the favourable consideration of the members. Having been connected with the Readers' Pension movement for more years than some of us care to remember, Mr. Feldwick does not need any introduction. If enthusiasm and tact will help on the good cause of the committee, the executive feel that these quilities are possessed by Mr. Feldwick, and they have therefore confidence in recommending him as the new Chairman of rhe Committee."

The balance-sheet showed a sum of over £100 in hand.

The report and balance-sheet were passed on the motion of Mr. Sydney Vernon, seconded by Mr. W. T. Lanham.

Rule 4 (relating to officers) was altered in order to reduce the number of secretaries from three to two and add another member to the Executive Committee.

Mr. Randall proposed that a letter of thanks for, and appreciation of, his great services to the committee, and sympathy in his illness, should be sent to Mr. W. Hilton. This was seconded by Mr. G. H. M. Holloway, supported by Messrs. J. Chandler, J. Grigor, and J. Feldwick, and carried unanimously, all the speakers making extremely eulogistic references to Mr. Hilton's work.

Officers were appointed as under:—Chairman, Mr. J. Feldwick; trustees, Messrs. R. Freeman and J. Chandler; executive committee, Messrs. J. Cannon (hon. collector), H. M. Gurr, J. H. Rose, T. M. Stamp, and J. W. F. Watson; treasurer, Mr. J. Randall; hon. secretaries, Messrs. W. A. Perkins and W. Shortell; auditors, Messrs. J. Grigor and W. Ball.

The allocation of votes among the four candidates having claims on the committee's support was the only other business, and Mr. Feldwick having made an appeal to the members to do their utmost to ensure success for the annual dinner on May 30th, the proceedings closed with a vote of thanks to Mr. Randall for presiding.

It may be mentioned that the Readers' Pensions Committee (of which the Hon. Harry Lawson, M.P., is president) has now paid over £3,000 into the funds of the Printers' Pension Corporation.

Imitation and Genuine Kraft Papers.

By SINDALL and BACON.

The characteristic flexibility of the genuine kraft papers as compared with that of the imitation krafts is easily shown by ascertaining two important factors, viz., the resistance to folding and crumpling, and the elongation or stretch under tension.

Resistance to Crumpling.

In the absence of the special machine, now recognised as the standard for the measurement of flexibility, some sort of empirical method of comparison must be adopted. This can easily be effected by the simple device of hand crumpling. The papers to be compared are cut to a uniform size of about 4 inches square and numbered. Each piece is taken in turn and submitted to the following operation:—

The four corners of the sheet are brought together at the centre and the whole piece crumpled up between the fingers. The folded paper is opened up carefully and gently smoothed out. It is then reversed and the crumpling process repeated. At the end of 10 foldings applied to each sheet (or a fewer number for papers of lower strength) the papers are held up to the light, and examined for pin-holes. Only those holes through which the source of light, *e.g.*, an electric lamp or gas light, can easily be seen are counted. A note is made of the number counted, and the crumpling process is continued for a second 10 foldings. The pin-holes are again noted, and the operation repeated for 40 or 50 foldings, according to circumstances. In some cases there may be a littte doubt as to whether a hole might be counted as sufficiently definite, but this will be governed by the observer, who must use his judgment. The method, for comparative purposes, answers very well.

The process should be repeated until the paper gives way suddenly. It occasionally happens that a sheet will go to pieces all at once, even though the number of pin-holes may be small.

The following tables show some results obtained with the imitation and genuine kraft papers already described:—

TABLE I.—TWO PAPERS, INDIVIDUAL READINGS.

Number of Foldings.	Pin-holes Showing. Imitation Kraft.	Genuine Kraft.
0	0	0
10	0	0
20	2	2
30	5	4
40	8	6
50	14	10
60	full of small holes.	good condition.

TABLE II.—NUMBER OF PIN-HOLES AFTER 30-40 FOLDINGS.

Sample No.	Imitation.	Genuine.
1	9	4
2	6	3
3	7	9
4	14	10
5	11	4
6	14	10
Mean	10·1	6·7

Elongation Under Tension or Stretch.

A similar difference between genuine and imitation krafts is noticed in regard to the quality and elasticity when the papers are submitted to tension, and when the percentage elongation under the strain is measured in the usual way. The method is too well-known to need detailed description, and we content ourselves with recording the results obtained on the papers already recorded.

TABLE OF STRETCH (PERCENTAGE ELONGATION UNDER TENSION).

No.	Genuine Kraft.	Imitation Kraft.
1	4·9	4·5
2	5·9	4·4
3	3·6	3·9
4	5·2	3·3
5	4·7	3·8
6	3·8	4·4

It will thus be noticed that in the tests made on the papers which were compared during this particular investigation we have a superiority in favour of the genuine krafts which may be expressed thus:—

Tensile strain, 30 per cent.
Bursting strain, 40 per cent.
Resistance to crumpling, 30 per cent.
Elasticity.

Naturally smaller or larger differences may be found if many samples of genuine and imitation krafts are examined. An extra good sulphite paper well put together in the making may show better results than a poorly finished sulphite. Such differences would indicate the value of a more extended enquiry.

Chemical Tests.

We indicated in the opening remarks of the first chapter that a microscopical analysis of the fibres will not alone afford convincing evidence of the genuineness, or otherwise, of a kraft paper. Deciduous woods are almost invariably converted into pulp by the soda or sulphate processes, while coniferous are, or at one time were, almost exclusively treated by the sulphite process. Now, coniferous woods are submitted to either process, and the normal examination of fibre structure failed to discern which method of treatment had been used. Certain colour reactions are to some extent relied on to discriminate between the two, but taken alone, without reference to other tests they cannot be regarded as absolutely satisfactory.

It is certainly easier to find chemical tests for the average genuine and imitation krafts, than for white printings and writings, manufactured from bleached sulphite and sulphate pulps. Every additional treatment in the progress of a sulphate pulp from the digester to the paper machine, and such boiling, washing, bleaching, sizing and colouring alters the nature of the material and renders the examination difficult. In fact, the actual extent of the admixture of the two kinds of pulp in a well-bleached and normally sized sheet of paper cannot be satisfactorily measured.

In case of the kraft papers, however, practically the only chemical processes beyond the actual boiling of the wood, relate to the colouring and sizing.

We may therefore examine the papers with reference to tests based on the effects due to colour and to the sizing, if any, added to the papers.

(To be continued).

ONE WEEK'S OUTPUT OF STEREO METAL.

TO TRADE BOOKBINDERS, BOOKBINDERS' PLANT AND MATERIAL MANUFACTURERS AND DEALERS, PUBLISHERS, LIBRARIANS, AND OTHERS INTERESTED IN THE BOOKBINDING INDUSTRY.

THE Publishers of the *BRITISH AND COLONIAL PRINTER AND STATIONER* have pleasure in announcing that an ILLUSTRATED MONTHLY SUPPLEMENT to that journal is now devoted to matter concerning the BOOKBINDING TRADES.

All branches of bookbinding are dealt with, from practical and technical standpoints, and the historical and artistic aspects of the industry also receive attention. Illustrations of hand-tooled bookbindings and publishers' cases which are remarkable for their artistic design, their historic interest, or their novel character are presented from time to time.

The BOOKBINDING SUPPLEMENT appeals to all those who are interested in bookbinding, whether as a trade or as an art, as all phases of the subject receive their due share of attention in its columns.

The Editor will welcome any news of trade interest that may be sent him, and is prepared to consider original articles of a technical and practical character, with a view to their publication. Information concerning the working of the technical classes in bookbinding, and notices of meetings of trade unions and other bodies associated with the bookbinding industry, are also invited; arrangements can usually be made, if desired, to report the latter, as well as lectures, etc., for the BOOKBINDING SUPPLEMENT. Illustrations and particulars of new machinery and appliances, and information concerning new materials and methods for use in the trade, are likewise of interest. The publishers having no end to serve save the presentation of matter of value to the various branches of the trade, the pages of the BOOKBINDING SUPPLEMENT are open to all, employers and employed, unionists and non-unionists, for the free discussion of trade matters.

As far as READERS are concerned, copies of those issues of the *British and Colonial Printer and Stationer* that contain the BOOKBINDING SUPPLEMENT are supplied at the rate of 2/6 *(payable in advance)* for twelve numbers, including postage. (Foreign postage 6d. extra.) Single copies, 2d. each.

With regard to ADVERTISEMENTS, the bookbinding trade announcements are placed in a POSITION NEXT TO OR FACING READING MATTER in the BOOKBINDING SUPPLEMENT. ADVERTISING RATES sent on application. Arrangements have been made to circulate the journal in quarters likely to be most productive to advertisers of a return for their outlay, and no effort is spared to study the interests of advertisers and readers alike.

Orders for advertisements in and subscriptions to the BOOKBINDING SUPPLEMENT issues should be addressed to the publishers:—

STONHILL AND GILLIS, Offices of the *British and Colonial Printer and Stationer*, 58, Shoe Lane, LONDON, E.C.

Cassell and Co., Ltd.

The annual general meeting of the shareholders of Messrs. Cassell and Co., Ltd., publishers, La Belle Sauvage, E.C., took place at the Memorial Hall, Farringdon-street, when a highly satisfactory statement of affairs was presented. Sir Clarence Smith, the chairman, said that the output for 1912 was a record one in the history of the company. The amount received for advertisements in their periodical publications was a record receipt—the net profit was about £5,000 higher than the year before and the highest net profit made in any year during the last 15 years.

The dividend the directors recommended to be paid was 3½ per cent., one per cent. higher than the last year's dividend. Comparing the items on the balance-sheet, the changes were all to the good. They had paid off during the year, out of revenue, the last £10,000 of the old 6 per cent. first mortgage debentures. On current trading accounts and bills, which were practically liquid assets and liabilities, they owed £5,000 less, and they were owed £10,000 more than last year, while at the bank their balance was in excess of what it was in December 31st, a year ago, by £6,000. They had, too, upon their shelves something like £10,000 less of stock than twelve months ago. To-day their only mortgage debt was under £100,000. Those who were looking out for safe investments at something like 4½ per cent. might find an attraction in their property they would hardly be likely to get elsewhere. As to copyrights, they appeared in the balance-sheet as worth £5,000 more than a year ago, but they recommended that £6,000 be taken out of the profit of the year and placed to the credit of the copyright equalisation fund, and therefore the real item of copyright was not increased. They would find that their copyrights stood at a lower figure than they did a year ago, though their earning power had improved. The reserve fund now stood at £27,000, and they were carrying forward an amount rather larger than they did a year ago. He was quite sure they would wish to join the board in heartily congratulating Mr. Arthur Spurgeon and the very able and devoted band of departmental managers he had succeeded in gathering around him. Sir Malcolm Morris, K.C.V.O., seconded the resolution. Several questions having arisen upon the suggestion that the time had arisen when the £10 shares should be sub-divided, as no other company of a similar kind had £10 shares, the chairman dealt with these, and proceeded to move a very hearty and cordial vote of thanks to Mr. Spurgeon, the general manager; the departmental managers, and the whole of the staff for their very successful efforts during the past year. The shareholders could not know as the directors knew, the ability, devotion and zeal Mr. Spurgeon had thrown into the business. The results, however, had given them a very good idea of the kind of general manager the company had.

The general manager, Mr. Arthur Spurgeon, J.P., who was received with applause, said he felt very much touched by such an expression of thanks as they had accorded to the staff and himself. Bouquets were always more pleasant than brickbats. (Laughter.) They had had some of those in days gone by; he hoped that era had ended, and that in the future they would have nothing but bouquets. (Applause.) He thought he deserved their sympathy and thanks a few years ago more than he did to-day. (Applause.) It so happened that he entered upon his connection with Cassell's eight years ago on the day of the annual meeting. They had then made £16,000 profit, declared a 4 per cent. dividend and added to copyright valuation £8,000. This year they had a copyright increase of £5,000 already provided for on the other side of the balance-sheet. Their net profits were £28,000, and they had declared a dividend of only 3½ per cent. He thought that the new policy had been justified by results. They had been conserving their finances during all these years, and he thought that was the policy they should pursue in the future.

The meeting ended wiih a vote of thanks to the chair man.

Newcastle-on-Tyne Press Bowling Club.

Mr. R. Common presided over a largely attended meeting of members of the Newcastle Press Bowling Club, held at the "Black Bull" Hotel, in that city, the other evening. The report of the hon. secretary showed that the club was in a flourishing condition, and the balance-sheet presented by the hon. treasurer was very satisfactory. Eight new members were proposed and admitted. The gold medal presented by Lady Baxter Ellis, it was decided should be awarded to the winner of the championship (four bowls). With regard to that long coveted trophy, the Crauford Smith Cup, it was decided to once more enter the competition, the skips chosen for this contest being Messrs. W. Bond, G. Metz, W. F. Armstrong and E. J. Dixon.

The officers elected for the ensuing season were:—President, Mr. E. Tebbutt; the vice-presidents were re-elected, with the addition of Sir Joseph B. Ellis, Mr. W. G. Ellis, Mr. R. W. Hopkinson and Mr. F. G. Crowest; chairman, Mr. R. Common; hon. sec., Mr. A. E. Longstaff; assistant hon. sec., Mr. J. Hutchinson; hon. treasurer, Mr. M. G. Peers; committee, Messrs. E. J. Dixon, I. Elrod, T. Rodger, C. O. Chrisp, G. Lyall, J. Skelton, R. Donald, G. Andus and A. Shannon; handicappers, Messrs. E. Duke, P. Knox and R. Common; auditors, Messrs. C. N. Athey and W. F. Armstrong; delegates to Wednesday League, Messrs. R. Common and A. E. Longstaff.

SOME CONTRIBUTIONS TO Scottish Paper Trade History.

Berwickshire is one of the Scotch counties in which a paper mill was in operation before the close of the eighteenth century, and there are still two mills at work in it, both of which are of long standing.

The most important of these is the Chirnside Bridge mill of Messrs Y. Trotter and Son, Ltd. Although "Scotch Mill No. 61" is now Chirnside, in 1825 this number was that of a mill in the Linlithgow district, and in 1832 it was attached to a mill at Balerno. The papermaking business which is carried on at Chirnside was originally seated on the north bank of the Whitadder, at Broomhouse, near Duns, in the same neighbourhood, where a small paper mill was erected in the latter part of the eighteenth century by a Mr. R. Reid. About that period, Melville Mill at Lasswade (which for a few years after 1815 was in the occupation of Messrs. Cowan), was in the hands of Mr. John Pitcairn, and in 1786 he leased Broomhouse mill, which was afterwards numbered 34. Four years later Mr. Pitcairn was joined by his brother-in-law, Mr. Young Trotter, who had been in the West Indies, and they traded together under the style of the Broomhouse Paper Mill Co. Mr. Trotter, who was a good business man, gradually assumed complete control of the concern, and carried it on unaided after his partner's retirement to Edinburgh, where he died. In 1825, Broomhouse Mill had six vats. a larger number than any other Scottish mill, Two years prior to this date Mr. Trotter had introduced his second son, Mr. Geo. Cranstoun Trotter (born 1803) into the business, so that by 1832 we find the mill listed as belonging to Messrs. Young Trotter and Son, a designation which is still retained. By this time a Fourdrinier machine had been put down, and the number of vats accordingly reduced to three. News and printings were the principal makes. Mr. Young Trotter, who lived close

Digitized by Google

by his mill, died there in 1841. According to the account of Edrom parish in the N.S.A., Broomhouse Mill at this time was on a "very extensive scale," employing 56 hands, male and female, who worked 10 hours daily, and were "healthy, sober, and in every way decent in their conduct." One important result of the elder Mr. Trotter's death was a decision on the part of his son to remove the business to another site, the one ultimately selected being at Chirnside Bridge, though still in the same parish of Edrom, and there a new mill was erected in 1842, to which the Excise authorities gave the now well known number 61. From that time to the present—just seventy years—the business has grown and flourished. In 1848, on the death of his eldest brother, Mr. Trotter succeeded him in the possession of the maternal estates of Dewar and Harvieston, in Midlothian, on which occasion he assumed the name of his mother's family, being in future known as Geo. Cranstoun Trotter-Cranstoun.

Chirnside Bridge mill was originally a one-machine mill, but a second machine was added in 1851. At the abolition of the Paper Duty in 1861 there were 54 in. and 63 in. machines, running on printing, plate and chart papers. A couple of years later Mr. Trotter-Cranstoun, who was a bachelor in his 60th year, decided to retire from the active management of the business, and accordingly made over the largest share of it to his nephew, Mr, Robert N. Slight, then a smart young man of 30, who had received his training in paper manufacturing at Valleyfield Mills. In 1867 Mr. Trotter-Cranstoun left Chirnside, residing until his death in 1885 on his estate at Harvieston. Mr. Slight was a first-class papermaker, and under his energetic management many great improvements and developments were introduced into the mill. From the early eighties enamel and surface papers were prominent among the makes turned out. Towards the end of that decade a new machine (85 in.) replaced the smaller of the two old ones, and this enabled the weekly output to be brought up to 70 tons, the mill at this time making a profit of about £6,000 a year. Writing about 1820, "Caledonia" Chalmers estimated that the three paper mills in Berwickshire, none of which was of any great importance, produced £11,000 a-year profit for their owners, and were valued at over £50,000. Towards the end of 1887, Major Slight, being desirous of retiring (he died at Edinburgh in 1908), opened negotiations with the view of turning over the business to a company, and the present firm of Y. Trotter and Son, Ltd., was accordingly formed, with a nominal capital of £50,000, in £5 shares, the mill being acquired on very favourable terms. The enterprise was well regarded locally, quite two-thirds of the shares being taken up privately. The new company promptly set to work to maintain, and, if possible, improve upon the mill's long-standing reputation for fine papers. In 1897 there was another development, a third machine (88-inch) being put in, so that by 1901 the turnout had reached some 120 tons per week. At the present day the principal makes at Chirnside Bridge are T. S. and E. S. writings, cartridges, fine esparto printings, imitation art papers, and pulp and triplex boards. The London agency, at one time held by the late Mr. P. C. Peebles, is now vested in Messrs. Frank Green and Co. Some 300 hands are employed, so that the mill is one of the most important industrial establishments in that part of Scotland. In the summer of 1908 one of the machine-rooms was completely destroyed by fire, and extensive damage done in other departments, but rebuilding operations were speedily undertaken. There was another, but luckily only a small outbreak of fire in April last.

In the early part of the last century there was another mill in Edrom parish, viz., Allanbank (No. 35), a one-vat establishment, which in 1825 was in the occupation of Peter Wintour, and made binders boards. By the commencement of 1832 it had passed into the hands of Wm. Martin, a member of a well-known local papermaking family, who added a second vat. It employed 25 hands, who worked only eight hours a day, although the men's wages were not more than 14s. a week on an average, and the womens 10d. a day. However, it is satisfactory to learn, as we do from the N.S.A., that the workpeople were "correct in their conduct." Some time before 1845 this mill was closed and its number given to the present Loch Mill at Linlithgow, which was thus presumably started about that time.

We turn next to Ayton, a little to the east of Chirnside, and for more than a century the seat of a paper or board mill. From the account of this parish which appeared in the O.S.A. (1791) we learn that "a paper mill was lately erected here at considerable expense. It employs about 70 or 80 workpeople, and circulates about £25 per week. The wages earned by the papermakers are high. This manufacture gives employment to a number of young persons, who are taken in at eight years of age." As in some other cases, we are left to guess what mill this was, but it appears to have been No. 30, Millbank, a one-vat mill occupied in 1825 by Ebenezer Martin. A year later the vat gave place to a machine, on which were made coloured cartridge, brown and pressing papers. From the N.S.A. (July, 1834) we gather that by the introduction of this machine the operations were "wonderfully facilitated and the number of hands formerly employed greatly reduced." Pasteboards and coloured papers were then the principal makes, and, says the writer just quoted, "recently a new plan has been adopted for drying it, by applying steam to the inside of large cylinders, round which the paper passes and comes off quite dry." Mr. Martin seems to have formerly had Bleachfield works in Ayton, but at this time that branch was given up and the buildings employed in "bleaching rags and reducing them into (what is called in the trade) *half stuff*, and from thence taken down to the mill at Millbank to be prepared and made into paper." About £800 a year was paid in wages, and the value of the mill's annual output was between £9,000 and £10,000. It was situate on the river Eye, but above the confluence of that stream with the Ale, so that in dry seasons water was apt to be scarce. The coals and rags required were imported at Eyemouth, where also many of the employees lived. By 1845 the mill was in the occupation of Wm. Martin, who made bonnet boards there, and had, at some time since 1832, converted the Bleachfield establishment into a board mill, the name of which still perpetuates the nature of the business formerly carried on there. The number given to it was 59, which was that formerly borne by a one-vat mill at Townhead, near Edinburgh, occupied by Wm. Blackie in 1825, but vacant by 1832, and never re-started. Millbank Mill was closed about 1870, the business being then concentrated at Bleachfield Mill, which enjoys the unusual distinction, for Scotland, of possessing a couple of vats, in addition to a 60-in. machine. The present makes are leather boards, with best rope and grey millboards.

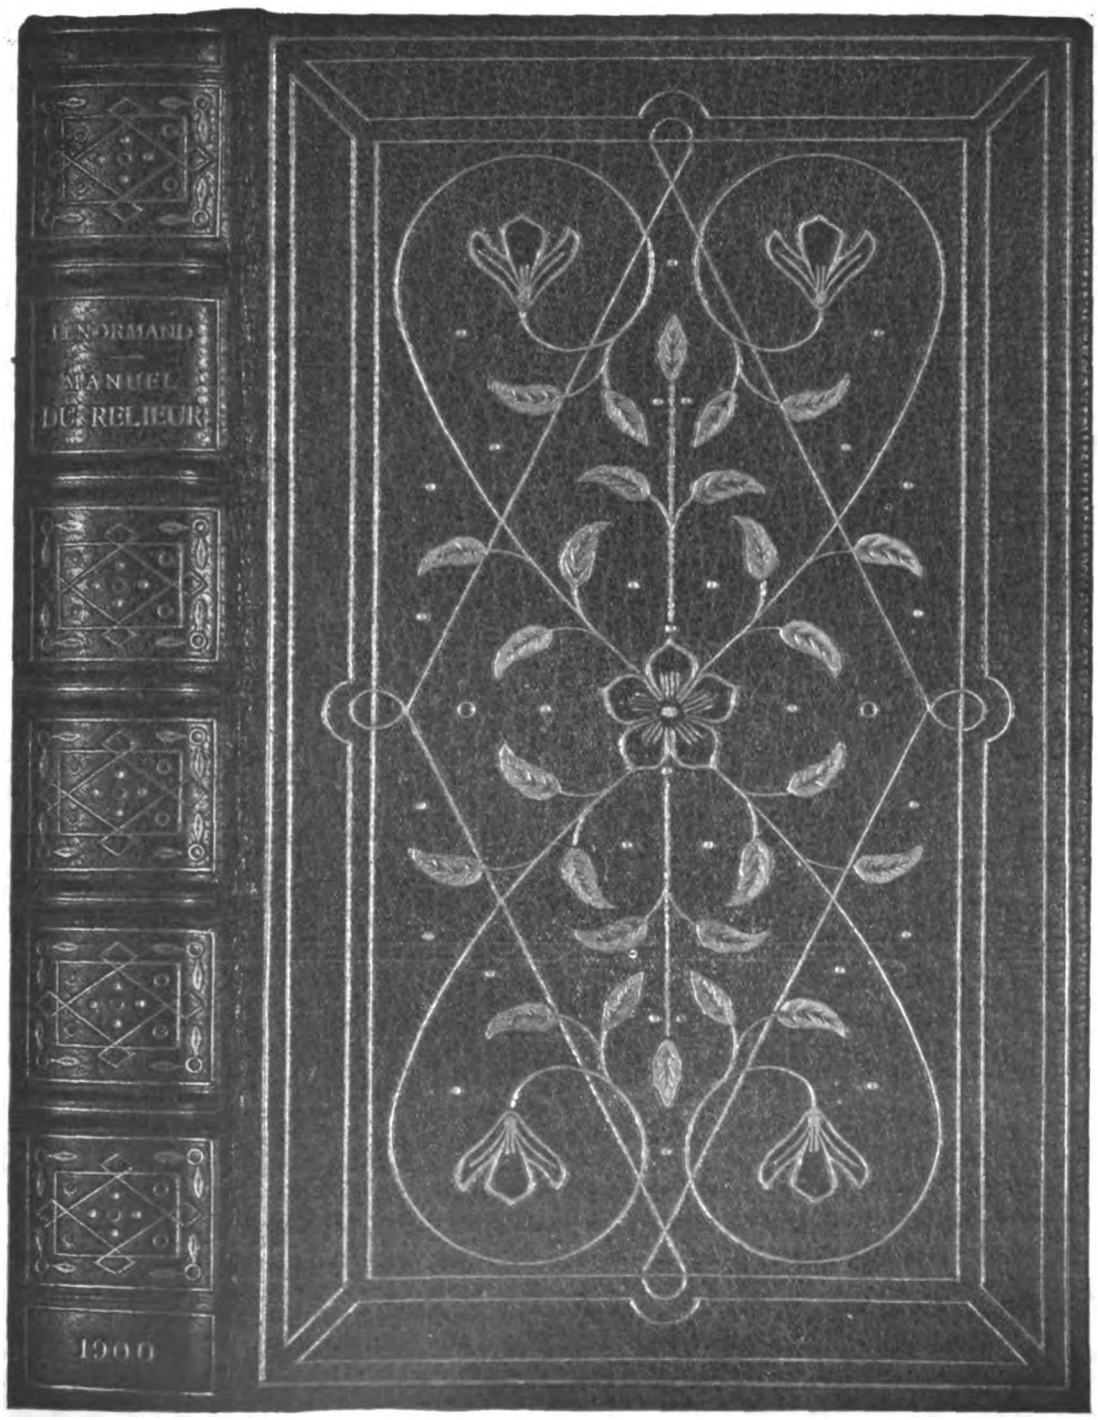
Technical Instruction in Bookbinding

XIII.



At the Ecole Professionelle de Reliure, Brussels.

The chief Belgian centre of technical education in the art of binding books, L'Ecole Professionelle de Reliure et de Dorure d'Art, is located in the Palais du Midi, Brussels. It was founded in 1898, by M. A. Malevè, who still occupies the post of Director, and it is largely due to his untiring energy that the classes now hold so high a position in the hierarchy of Belgian art craftsmanship. He has the good fortune to possess an able and enthusiastic collaborator in M. Jacobs, the Instructor in finishing and design, a worker of great talent, whose influence and ability has had its reward in the numerous distinctions conferred upon the various displays made by the classes at local and other exhibitions.

Mention must also be made of Messrs. Hendricky and Rykers, the talented and devoted teachers of forwarding at the School.

The classes are held in the evenings only, mostly from 8 to 10, and the age at which pupils are admitted is from 14 to 18 years. On Mondays only there is a sort of extra class introductory to the "History of the Book," with special reference to Bookbinding; on Tuesdays a class in design, for both forwarders and finishers, the regular classes in both these branches being held on Wednesday, Thursday and Friday evenings. There are both elementary and advanced classes in forwarding, but only one in finishing. On Saturday evening there is an advanced class in "The History of the Book," and on Sunday morning (9 to 12) some for adults only in forwarding, finishing and design. On Sunday mornings also, the pupils of the evening classes are frequently taken round the local Museums, Exhibitions, etc., under the guidance of one of the instructors. The School Term extends over eight months, *i.e.*, from September 15th to May 15th, during which only eight days of holiday are allowed. The number of pupils under the care of the five teachers employed has always steadily increased. During the first five years of the School's existence, the annual average was only about a dozen-and-a-half, but in the sixth year this total was more than doubled; in 1906–7 it reached 74, and for the present term 88 pupils joined. A good deal of spade work has to be done in the classes, as many of those attending for instruction have only a slender all-round knowledge of the trade, notwithstanding that they are engaged in it all day. The professors are very carefully selected, and it is a *sine quâ non* that they are not only good craftsmen, but also possess a thorough knowledge of the styles of binding in vogue at all epochs in the history of the book. The average annual cost of tuition is about £4; the usual attendance at the evening classes is 40, and at the Sunday adult class, 35. All necessaries are supplied to the pupils free of charge.

Although, first of all, the school is intended for the instruction of persons residing in the capital, those coming from other places are enrolled so long as there is room. Thus, in the current term, Brussels and its suburb Ixelles furnish forty pupils, Anderlecht, eight, Mollenbeck, six, St. Gilles, nine, and so on, and there are some from much more distant places, like Antwerp, Liege, Mons, Namur, etc., twenty-three localities in all being represented in this term's attendance lists. Apart from the regular classes,

the professors give frequent special instruction to pupils from England, Germany and America, in so much esteem is the school and its talented staff held.
